Subject: [ten_tec_radio_net] Hello from new member

Hello. I just joined the group after hearing the net on 20 metres
just after 8am Eastern australian Summer time. Signals weren't all
that strong here, but long path was opening up to the U S and I heard
John announcing the details of the group. So, here I am.

I am a licenced Ham, and have been so for 8 years in February.

I use and enjoy operating my Kenwood TS-590s with a variety of
aerials. However, I lacked a true QRP rig and am about to buy a
TenTec Argonaut VI. The intention is to work some QRP DX both from
home here in Corio, Geelong, and from some portable locations when I
build the aerials.

There you have it and I look forward to contributing to the group.

73 to all and thank you for having me as a member of the group.

Ian Westerland

Hello Bill. I have been told there is an
amplifier that will allow PEP output of 100 Watts
from the Argonaut and that would be good as my
licence allows me to run 100 Watts so I will get
to know the Argonaut first, then
graduate. Ten-Tec seems to have a good range of
rigs and I am always looking at improving the quality and equipment I use.

It's that time again.

We meet at 7063 +/- beginning at 7:30 Eastern Time (00:30 Z)

Last week, was the highest number of check-ins (17).

Also, I hope the band conditions are favorable.

After hearing "QNI", send the last two letters of ur call.

I will acknowledge so u may stand by in que.

Exchange:
call, name, rst, state and radio.

Relay:
if u hear a station NCS cannot hear, send "QNB" then ur call.
I will send "K".

After u gather info, send "QNB" and ur call again.

I will send "K" . then u proceed to relay the data.

Remember,
This is a slow speed net. Any speed is acceptable up to 13 wpm.
This gives everyone a chance to dust off that key or practice your
skill..

see u there

The band was not favorable to support our net last night.
Regardless, many of you did manage to ck-in.

Maybe the deep freeze affected our signals waiting to thaw out. (smile)

The good news is we had 13 check-ins.
Many of you were light and one was 599.

Let's hope for better conditions nx wk.
I hope all of you are keeping warm. It's single digits here in MA.

Yet another milestone.
36 New Check ins Sunday for a Total of 243 Check ins Sunday for a Grand Total of 1527 to the TEN TEC SSB and CW Nets..
8 New People have joined the TEN_TEC_RADIO_NET on the Yahoo Group for
a Total of 193.and looking forward to the next milestone of 200.
I welcome the new Check ins to the TENTEC Family and hope to hear you all on
the air this coming week on the TENTEC Nets.
Also check out the pictures on this site under PHOTOS.
Then you can see the check ins summary totals under FILES to see how many check ins you have each week.
All questions you might have just feel free to ask on the TENTEC Radio SSB Nets
or just ask here on this site.
You will hear pros and cons as we all put our heads together an work out things as a Family does. WE are here to help you and if one of us doesn't know we only have to ask and the answers will be found. If you are new and a little shy about a question
that you have please understand that this Net will Elmer you along with your Amateur Radio interest of various things you might want to find out about.

John,

Glad to hear that you made it home safe. We watched the news, of Atlanta, this morning and it was truly horrific. One woman had travelled about the same distance as you and it took her 18 hrs. Amidst all the chaos a baby was born in a vehicle. We have about four feet of snow on our property and temperatures have regularly been in the range of -16 to -36F. Even the local inhabitants want to go South. Talk to you soon.

73, Tony VE3DWI.

Its Strange! I worked 2 FL station just before the net. Both were 59+ then nothing. That's why I wondered if they had moved up or down the band.
Tnx for letting me know I am not the only one that's not hearing the east coast any more.
Bill

Hi Everyone,

Boy, I have to say, the 539 really works well on QRP at 5 watts. I use mine with my 715 RF Speech Processor. John K3UR as well as other folks said the speech processor made a big difference.

I know the 715 adds some distortion, but the increase in intelligibility is well worth it. I intend to hook up the new 418 amplifier in the next few days permanently to give me a lot more flexibility.

Great job to the Net Controls as I had successful check-ins on both 40 and 20 meters today using 5 watts on each check-in.

73,
Bill

Ditto,

They wipe out the net just about every week from here. Not to mention if they are there before the net, which they almost always are, operating on 7.261 would cause them interference.

Any chance of moving the net up a couple to help us guys out here?

Just a thought...

Topic: 1380  Message: 1382

John,

I wouldn't consider it interference to the net in general, just for some of us out west and it's just one of those things...

There is a group on 7.260 that meets just about every day for a round table/ rag chew mostly from here in Texas from what I've heard. Depending on band conditions you guys might pick them. Sometimes they are not there at net time, but most of the time they are and if they are, they were there before the net started.

For example, I first heard them when I was tuning around the band this morning and they were still going strong long after the net was over.

Not sure about the tuner-uppers etc., but this is what I was referring to when I threw out the possibility of sliding up a couple kHz. I am just not sure if there are enough of our net members that have this issue to justify a move.

YOU all did a good job today. Thank You.
Propagation was tough, up and down or not at all depending on where you are.
Some need a Band-Aid, some need Relays, some need a new antenna, some need a TENTEC Radio,
HiHi and We all need Prayers.

Anybody that can work NJ on half a watt is doing good in my book.
Nice Job Ray.
I will always take the time to get that QRP'er or mobile any day.
I welcome you to try it with me because I like it.
The harder you are to hear the more you will like a TENTEC Radio.
If you would like to try Sa.t or Sun. any weekend I will set a schedule with you and run
QRP Back to you. A couple on months ago I work QRP into England and Russia
and worked them on 2 watts or less.
Many station were running two watts to 1/4 watt and had a big pile up for 4 1/2 hours
of non-stop QRP.
Just another thing to do to have fun.
I work several station today on the TENTEC Nets that were running inside antennas
and were QRP.
If you are reading this and haven't got on the TENTEC Nets because you can't have outside
antenna and need ideas as to what to use send or write to me and this TENTEC Group will
find a way to help you get on the air.

# 1391. 7.261 Net Frequency

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-03 18:13:53 UTC
From: <tvman1954@...>
Topic: 1391  Message: 1391

I was listening at 7.261 at 11:00 AM Central Time. Located here in the middle of Tennessee, I heard nothing on either side of the Net Frequency up until the time the Net started. I must admit that with the 1.8 KHz. filter engaged and the Pass Band Tuning and Notch set. And both at settings which rarely get changed. We could have been missing something here. I did hear bunches of tuner uppers and some stuff off to the sides after the Net got started. I personally get flack from friends for talking on 75 meters. When that happens, I just ask them if they have listened to 7.200 lately! Personally, I don't care if a New Ham has to learn Morse Code or Not! What I do care about is the way New Hams can Memorize a few answers and pick up the General or for that matter the Extra Ticket. Just seems to me that the bands were much nicer when there was more involved than doing some memory work and passing the Multiple Choice Test. Before the Flame Throwers get fired up! I did say that I have nothing against the Code Requirement being dropped! Just believe the testing requirements should be more involved. On 20 Meters the other day ( a band which talks around the world with 5 Watts ) I was astounded to hear a fellow say that when the SWR's backed up in his Coax, it caused his Power Supply to draw Less Current and his Modulation was not making it into the surrounding Ground Wave. That made all of his signal go into the Sky Wave which is Not an efficient way to talk DX. ..... Go Figure .... O.K. I am through with my rant for the day. Think I will try and minimize the Sky Wave Radiation from my Antenna System today. According to our New Extra Friend, I can talk to Barcelona, Spain much easier with good Ground Wave Radiation. Please, don't light up your Flame Throwers because of my opinion. 73 to All

Hello Ten Tekkies!

A brief reminder the TT CW net on 7063 begins 00:30 Z (7:30
PM Eastern time).

This is a slow speed net (up to 13 wpm).

New comer or old timer are welcomed.

Dust off that key. Connect them paddles.

This net is to promote CW activity and provide means to
practice. "Breakneck speeds" are discouraged.

The exchange is:
RST, NAME, STATE, RIG (does not have to be Ten Tec)

Remember the new procedure:

After I send "QNI" please sign using
the LAST 2 LETTERS of ur call.
When I acknowledge by sending those two letters followed with "AS" (stand by), so I may add more stations to the que.

EXAMPLE

u send "KC", I send "KC AS"

(Please, when I send AS together it means STAND BY)

During the que, when I send the last two letters and it is
ur call, then send ur full call and proceed with the
exchange.

Let's hope we have better propagation.

see ya tonight!

Ron, wb1hga
TT CW NCS

Although I can most times work 10 meters pretty good with my 126 foot Dipole with Ladder Line feed and the Tuner. My success with the 10 Meter Ten Tec Net has been very bad. Haven't been able to make it yet. When the weather warms up, we will be installing the Vertical antenna for 11 Meters which was given to me. Once retuned for 10 Meters, and with the help of a pair of 3-500Z's. We are hoping for much greater success. Back in the 1960's my Father was able to talk to Nashville from Columbia about 45 air miles on the CB with 4 Watts and his 3 element Beam. We will be trying really hard again next Sunday. Do the Net Controls use Vertical or Horizontal Polarity? I may be able to get a Rotatable Dipole in the air a few feet if needed.

From: <tvman1954@...>
Topic: 1388  Message: 1396

Walk around the house before the 10 meter Net and unplug everything which has a Switched Mode Power Supply. This includes the little Wall Warts for Cell Phone Charging. If you own a Plasma Display TV set, turn it off. My Cell Phone Charger puts out a Really Nice Signal on 3.980 KHz, The SMP for my Cable Modem will completely take out any hope of hearing anything on the Broadcast AM Band. This is not a good thing for an avid Coast to Coast AM listener. Although since Art Bell has been gone, the show is not as interesting by a long shot. My friend Dale/KA4ZDR has to unplug the Rear Projection TV he owns before he can talk on 3980 KHz. And my Police Scanner goes completely Crazy if my Laptop is charging. But, only when it is charging.
73 and May God Bless from Wade/KJ4WS

Topic: 1397  Message: 1399

John,
Roger that. Ok on 1:30PM Sunday 2-9-2014 on 7.630.
Sounds good to me.
Work sent everybody home at Noon because of the HEAVY WET SNOW and ICE followed by ICE PELLETS back to SNOW here in NJ today. The other reason is I think that the drivers from GA. showed up here in NJ
to take out our telephone poles, stop signs, street lights, traffic signals and to make new entrances into houses, barns, ditches and woods full of trees that did not jump out of the way for some reason.
So I came home and feed the birds shoveled the walk again and turned on the radio.
Ham Radio saved a life today on the road because the cell phone signal was in a dead spot.
A good reason for you Family to get their Amateur Radio tickets.
Maybe, "Honey, If your cell phone is in a dead spot you could call on your new Hand Held HT on Repeater for help". If that does not work because the Repeater is not battery backed up when the GA drivers in NJ took out all of the power poles you could call for help on the New TENTEC Eagle HF Radio in your car to the New TENTEC EAGLE HF Radio in my Truck.
Or Maybe, If I am at the house you could call me on the New TENTEC OMNI 7 HF Radio for help too.
If I am running the Snowmobile you could call me on my, I mean our Argonaut 6 for help of course
as well.
What I can not figure out is how all of those GA Drivers got New Jersey License Plates on all of those cars
here in New Jersey?
Stay Warm,
73,
Lloyd N2KPC

Wade myself ted and a few others were on 7.261 almost 45 minuets before the net started and did not hear them on 7.260 until the net started. They then began to tune up and start a qso and then complain about us?

One of the things they don't teach on the ham test's is "Etiquette". We need to Elmer our new young ham's not only about the technical but how to operate in a Professional Courteous manor.
Just my 2 cents.

Sorry about that, up to now, the order of exchange is not important.

I am writing a logger app for myself. When completed,
I will list the permanent order of exchange to follow.

Right now any order will do as long as I get call, name, state, rst and radio.

see ya tonight.

Ron, wb1hga

Ron, u changed the order of the exchange agn, any reason?

---

---
Hello Ten Tekkies!

A brief reminder the TT CW net on 7063 begins 00:30 Z (7:30
PM Eastern time).

This is a slow speed net (up to 13 wpm).

New comer or old timer are welcomed.

Dust off that key. Connect them paddles.

This net is to promote CW activity and provide means to
practice. "Breakneck speeds" are discouraged.

The exchange is:
RST, NAME, STATE, RIG (does not have to be Ten Tec)

Remember the new procedure:

After I send "QNI" please sign using
the LAST 2 LETTERS of ur call.
When I acknowledge by sending those two letters followed with "AS" (stand by), so I may add more stations to the que.

EXAMPLE

u send "KC", I send "KC AS"

(Please, when I send AS together it means STAND BY)

During the que, when I send the last two letters and it is
ur call, then send ur full call and proceed with the
exchange.

Let's hope we have better propagation.

see ya tonight!

Ron, wb1hga

I Confirm this and not the first time either. We listen on several HF antennas, radios and bands as well on more
than one frequency per band.
On the Net frequency, above and below too if needed.
Sad when they talk about doing it before they do cause the preplanned intentional interference.
73,
Lloyd N2KPC

# 1405. New Hams on the TENTEC NETS

When you hear a new check in to the TENTEC Nets let them know about the
TEN_TEC_RADIO_NET on Yahoo and John,KC2QMA Live Link on QRZ.
Also the Pictures on this site and the Files where they can see who's who and how many
times they have checked in to the TENTEC Nets.
If your relaying their first check in give just let them know.
Several Hams found the Nets by just tuning around last week.
A little adds up to a lot, You are the proof of that, Thank's.

Good Morning Roger & the Group
I have the same birdie at 28.440! The darn thing is a 10 over noise. You move either way 2 or 3 and it's gone. I have been told it could possibly be from the power supply. It's a good thing it was there last weekend. It was the only thing I could hear at the time of the net! LOL It gave me something to listen to! lol Just before the net I was hearing OH, MI, FL & GA then someone pulled the plug. shut the door and closed the windows. We will hope for better conditions this next weekend. I have yet to hear the net on 40 here in Arizona, but will keep listening for that big signal out of NJ! One of these days.

-------- Original Message --------
Subject: [TenTec] About possible TenTec Newsletter
From: John Henry <jhenry@tentec.com>
To: Discussion of Ten-Tec Equipment <tentec@contesting.com>
CC:

The posting Bob McGraw made was the newsletter sent out by Jim automatically.
I know that as a recipient of that letter there is a link at the top that takes you to TEN-TEC. Maybe that is what it considered spam or malware. Maybe putting the newsletter address on the safelist for the email receiver would help.

Recently, I had to inform Norton that they are false triggering on some of our downloads, e.g. the 599 update file, Norton was saying it was a specific virus. I alerted them and they rescanned and approved it.

But, the news in the newsletter is true, and actually is great news. The new sales manager for the amateur business will focus on getting TEN-TEC in front of customers, possibly more hamfests, better targeted advertising etc. Will have more one on one with customers so that he/she can tell us what needs to be made next, how many he/she thinks we will sell, etc., we can then evaluate costs, effort, etc., and make a real project plan for it and git'r dun.

As I have said before, TEN-TEC ain't sleepin', we are evolving and growing.

Thanks, and 73,
John Henry, KI4JPL
TEN-TEC Engineering

Dear Mr Sumner and Fellow ARRL Members and Amateur Radio Operators,

Please read the following quote from the ARRL Letter for January 30, 2014, and then take a look at the attachment of a screen shot from my station taken on January 29, 2014.

The ARRL Letter for January 30, 2014
"After a January 26 start, the 14-member Amsterdam Island FT5ZM DXpedition <http://www.amsterdamdx.org/the-team/> team is on the air from two camps on the small South Indian Ocean island outpost. The FT5ZM operators have been attacking gigantic pileups that sometimes spread across 10 or 15 kHz or more of spectrum. Despite the imprecations of the self-appointed "DX police," many stations continue to call FT5ZM on its transmitting frequency instead of /up/ the band where the operator is listening. FT5ZM operators use split-frequency operation. Considerable intentional interference has slowed progress too." (emphasis added)

Since when is MY LEAGUE endorsing "spread across 10 or 15 kHz or more of spectrum."? The League published with no disclaimers the League is obviously endorsing, get the DX at any cost.

This behavior is simple interference, QRM! I noticed in the current edition of QST an article titled "Pileup Misbehavior". Misbehavior, in my opinion wasn't conducted by the station running the pileup. The misbehavior was first that of the operators whom violate the first rule of conduct, listen before transmitting! What's more the second misbehavior was by the ARRL and all of you whom perpetuates the attitude of winning the DX at all cost.

These misbehaviorwill likely have several consequences. When the screen shot was made I had a young potential ham in the shack. He was listening to me conduct a _casual_ CW contact. The other station was transmitting and I was hand copying so that my new friend could read what a great SERVICE amateur radio is and the pleasures of the hobby. Suddenly! A massive cacophony erupted and my hand copying stopped. My guest asked "What happened." Pointing to the panadapter display I explained, there is some DX on and the "picket fence" on the screen were stations trying to make contact. His next words were, "That's rude!"

There are consequences for endorsing and encouraging these pileups. Two of the consequence are; one we will lose a new ham! And two there will be a loss of MONEY because the new guy wont be buying any equipment, joining the League or spend any money on the amateur radio

SERVICE or hobby.

I am certain "The Old Man" would not have endorsed nor tolerated this misbehavior from the members of the League he founded! I suggest the ARRL undertake an aggressive anti QRM "Listen First" project. The DX is becoming an obstacle and burden to the future of the SERVICE and hobby.

I am looking forward to the exciting anti QRM work you all are undertaking. My membership $$$ may depend on it.

Respectfully

Paul E. Koretko
WA0BAG

Paul I agree QRM is becoming more of a problem lately in general across the bands and it is causing more and more hams to give up the hobby. I myself have even considered giving it up but I realize there are still more good hams than bad so I am going to hang in there for now. As I tune around the bands I have listen to many conversations about hams so disheartened about the QRM and some outright viciousness by others that people are deciding to give up the hobby.

One such incident was a new young general who was making his first HF contact when a few QRM'ers started to key up with tones and make vulgar remarks to him. He said "I didn't know that this type of stuff whent on in ham radio I thought it was just CB". He sounded very upset that the time and money he invested in the hobby was for nothing. At that point I jumped in and told he yes there are some bad people in the hobby but most a good people and that he should not take it to heart. He said if I had known it was like this I would never got into this hobby.

With out FCC enforcement people know they can get away with this type of malicious behavior.

We need Riley Hollingsworth back as the FCC Enforcement Officer. He cleaned up the mess 15 years ago. Now we have a women who is not a licensed Amateur Radio Operator who allows even worse conduct to continue on the ham bands.

I knew several of the people who were actually visited by Riley Hollingsworth and they are no longer active on the ham bands. I knew Riley and had met him on many occasions.

I agree that the no code allowed a great deal of people to get on HF. Some of these people are an embarrassment to our hobby. We need real enforcement to return to Amateur Radio.

Speaking of Riley Hollingsworth, in 2000 at the Dayton Hamfest my Wife Gaye, KB2YOA and myself meet Riley Hollingsworth after his speech and I thanked him for cleaning up the Amatuer Radio Bands.
I was driving a large Bookmobile Bus all over Burlington County NJ since 4-19-1999 and had a TENTEC Scout 555 with copies of QST, Technician Class Amateur Radio license book, Shortwave book and handouts from the ARR to show School kids, and everybody that came on board the Bookmobilr Bus the hobbie.
Before Riley Hollingsworth cleaned the Ham Bands up I could not demo HF on the air to kids because of the
cussing on the HF bands. There is a picture of Gaye, Riley and myself on the site taken at the time when had the chat under PHOTOS. I showed him pictures of the Ham Radio display on the Bus which made him say. "That makes it all worth while"' He had a big smile on his face. I did not like the news when I heard that he retired because he was the right person for the job, period.
I heard Riley on the air in action one day and never laughed so hard when the clowns on the band told him where to go and he ID himself, then I read about the BIG FINES those clowns had to pay later with the loss of their tickets as well. Smile.
So if you are a cussing on the air, causing interference I might Smile yet that smirk once again.
I wish to Thank all of the fine Hams on the TENTEC Nets for upholding the standards and treating each other and looking out for the new Hams as well.
That make it all the time, hard work, spending money for the 1 1/2 hour round trip to the DVRA Shack to do the TENTEC Nets, spending one or two nights there every weekend to save fuel at 10 miles to the gallon also to make sure that I can be there because of bad weather all worth while because it is a Honor to help the TENTEC Family and TENTEC because you care about one another. That is what makes any net great. Here it comes, God Bless each and everyone of the TENTEC Family.
We lead by setting a example, that's why the TENTEC Nets and TENTEC has done so well. I hope to see many of you at the TENTEC Hamfest 2014 and at the TENTEC booths at Dayton 2014 as well. Try to make it to the TENTEC Hamfest if you can, my Wife and I put in for our vacations all ready to come, hint.
If you need a ride post it here, carpooling anybody, times are tough for everybody. Maybe rent a bus for a group. Thumbs up, HiHi.
Several Blind Hams have emailed me about many concerns for operating systems regarding radios, let me know about any ideas or programs you might think of.
I spoke to Carl, N4PY at the TENTEC Hamfest 2013 and Gordon West, WB6NOA at the Dayton 2013 for Ideas to help Handicap Hams.
Post it here please because the Blind Hams are using JAWS and other computer reading scanning devices to read this site everyday from all over the world because they email me and phone as well along with HF contacts too.
This information is needed so please give it some thought and keep a ear open,
I forward such information to TENTEC so they can keep abreast of new ideas.
If you wish to email me off the group for you privacy feel free to do so at n2kpc@arrl.net mailto:n2kpc@arrl.net ant anytime.
There are several limited sight and blind hams on the TENTEC Nets and this group as well.

C U on the Nets,

Those that truly wish to become knowledgeable and competent hams will do so. The rest won't be around for long as they will derive no challenge or satisfaction from this activity.

Please explain why, though no longer required, more people seem to be studying and using code.

When I finally decided to get my license in 2007, I was all set to learn code. It was actually a bit of a let down to find out that code was no longer required. Anyone that has a problem with this, their beef is with the FCC, not me.

As previously stated, knowing code or not is no indication of one's ability or suitability for amateur radio.

Whoa, When I took my first tests starting 55 yrs ago we had to hand draw the schematics and label the components. We worked the formulas by hand, no calculators or computers. Do not tell me that the tests were easier back then.
Now anyone can open a Wheaties box top and get a license. Just about anyone can memorize the QA manual.
Dropping the code requirement was for the benefit of the manufacturers, the the big name suppliers and yes the ARRL so they could raise their rates as membership grew. Big money

game in advertising.
Andy, W3LI.

□

Hi John,
I agree with you that no code allowed a great deal people to get into hf .
I'm going to disagree with you about the testing concerning the code. We've been hearing many older operators saying the same thing you put forward. I believe the problem goes further. Using the code as the stumbling block for testing did work for many years. It kept anyone out who didn't put effort into learning for the tests. If you look back, any level that had code as part of the requirement in testing, the written part was relatively easy ( novice,general,extra ) . The hardest theoy tests were technician and advanced. Having passed all these tests to get my license, the difference between what I knew as an operator and someone that got their license years earier was a lot, but hey I sure could use a cw key.
When they first wanted to get rid of the code requirement I was against it. Over the last few years I have changed my view on this and now believe cw is just another mode of operation. They never had to test for rtty, sstv, packet, psk , etc., or any other mode of operation other than an occasional question from the question pool. I say this and cw is my preferred mode of operation.
Years before I got my license the written requirement should not have gotten easier. Changed maybe, to follow the times, but not at the expense of theory. If this had been the case when the code requirement was discontinued an amateur radio operator would still be quite knowledgable in our hobby .
Also, with the advent of computers and the push to make everything available to everyone at all times, the question pool and answers should never have been put on the the internet. Many a new operator goes on the computer and memorizes the answers then goes and finds some place to take their test. With this method they learned nothing. Who is at fault? Them? No. We are at fault for allowing this to go on.
There are some newer operators that use amateur radio just as they would a cb radio but there are alot of older operators that do the same thing. Just go to 14.313 and listen for awhile. These guys talk worse than most any trucker I've ever heard.
Again, I believe it is us at fault. We as a group need to work together to persuade these operators to become professional amateur operators. Only after we have tried to work with these people should we forward a problem to the arrl or the fcc. We are after all self-policing.
Also, we as group need to convince the ARRL the need for testing reform if we want Amateur Radio to continue as something other than cb radio.
Sorry this ended up being so long. 73 and I'll probably see you again at Dayton.

We need Riley Hollingsworth back as the FCC Enforcement Officer. He cleaned up the mess 15 years ago. Now we have a women who is not a licensed Amateur Radio Operator who allows even worse conduct to continue on the ham bands.

I knew several of the people who were actually visited by Riley Hollingsworth and they are no longer active on the ham bands. I knew Riley and had met him on many occasions.

I agree that the no code allowed a great deal of people to get on HF. Some of these people are an embarrassment to our hobby. We need real enforcement to return to Amateur Radio.

kc2qma@... wrote:

Paul I agree QRM is becoming more of a problem lately in general across the bands and it is causing more and more hams to give up the hobby. I myself have even considered giving it up but I realize there are still more good hams than bad so I am going to hang in there for now. As I tune around the bands I have listen to many conversations about hams so disheartened about the QRM and some outright viciousness by others that people are deciding to give up the hobby.

One such incident was a new young general who was making his first HF contact when a few QRM'ers started to key up with tones and make vulgar remarks to him. He said "I didn't know that this type of stuff whent on in ham radio I thought it was just CB". He sounded very upset that the time and money he invested in the hobby was for nothing. At that point I jumped in and told he yes there are some bad people in the hobby but most a good people and that he should not take it to heart. He said if I had known it was like this I would never got into this hobby.

With out FCC enforcement people know they can get away with this type of malicious behavior.

In Eastern PA today 649,000 people lost power earlier today and won't have any power back until at least Monday.
Pa called for 500 more power crews to be brought in. Compared to Hurricane Sandy which 1.2 to 1.4 million people lost power this is a big event. Between GA and PA this is a good time to think about Marine Batteries and Solar Chargers, A little Wind charging system.
We just missed this Ice Storm by 17 miles here in Mt. Holly, NJ.
Remember, if you have a ungrounded antenna with a length of coax in a snow storm it can produce a big spark when it discharges when it touches anything and the spark can start a fire. We have tested this at the Fie Academy.
We used a 11 meter Big Stick Vertical antenna with a ten foot piece of coax during a windy snow storm and when the coax
connector touched the side of the painted cinder block wall it discharge a spark that left a 4" burn on the painted block.
The coax was just hanging straight down along side of the wall and the wind blew it into the wall.
So if you have snow, wind or ice don't forget to ground your coax connector by grabbing the COAX CABLE and ground the CONNECTOR to a Ground so you don't FRY you TENTEC RADIO.
73,
Lloyd N2KPC

# 1438. Tower Tragedy: Fatal West Virginia Tower Collapse Takes Out Ham Radio Repeaters

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-07 01:41:24 UTC
From: <n2kpc@...>
Topic: 1438  Message: 1438

A Sad day in West Virginia from QST, Our Prayers for the Families..

Tower Tragedy: Fatal West Virginia Tower Collapse Takes Out Ham Radio Repeaters
The collapse of two radio towers in North-Central West Virginia on February 1 resulted in three deaths and injuries to two individuals. The tragedy also resulted in the loss of three Amateur Radio repeaters belonging to the Stonewall Jackson Amateur Radio Association (SJARA http://www.sjara.org/) and forming part of the HamTalk http://www.hamtalk.com/ linked repeater system, which were available to assist with emergency and disaster communication. Richard Wilt, K8TPH, reported that one tower went down, killing two workers on the 300 foot structure and taking down a second, shorter tower. An emergency responder died after being struck by falling debris. Two other tower workers suffered minor injuries. "The towers are an important link in maintaining cell service and repeaters for several commercial companies locally," Wilt said. "The towers also were in use by the Amateur Radio community with three repeaters located on the towers. These Amateur repeaters are a major part of the North-Central West Virginia emergency communications to assist the Office of Emergency Management of Harrison County, FEMA, and the American Red Cross." The Stonewall Jackson ARA has a memorandum of understanding with the Harrison County Commission and the cities of Clarksburg and Bridgeport to assist during emergencies that require communication support. SJARA Vice President David Anderson, N8YPE, is the Harrison County Emergency Coordinator. Wilt said the club has moved its weekly emergency net to another repeater, but he said it's not known when the towers will be replaced. He said the SJARA spent a substantial amount last year on repeater maintenance, and he expressed concerns about the cost of replacing the repeaters. According to news accounts, West Virginia State Police said three workers approximately 70 feet above the ground and a fourth man about 20 feet above the ground were on the tower. They were said to be repairing structural supports.

Tragic Tower Collapse
On Saturday February 1, 2014 at 11:30AM a tragedy struck North Central West Virginia. A radio tower collapsed killing two tower workers and bringing down a second tower resulting in the death of an emergency responder from falling debris. Two other tower workers at a lower height suffered minor injuries.

The towers are an important link in maintaining cell service and repeaters for several commercial companies locally. The towers also were in use by the Amateur Radio community with three repeaters located on the towers. One VHF repeater (147.210MHz) and one UHF repeater (444.175MHz) were located. on the tower. A third Link repeater was also located on the tower serving the HAMTALK System which links 5 VHF repeaters located in north central West Virginia. These Amateur repeaters are a major part of the north central West Virginia Emergency Communications to assist the Office of Emergency Management of Harrison County, FEMA, and the ARC.

These three repeaters are associated with the Stonewall Jackson Amateur Radio Association (SJARA) which has a Memorandum of Understanding with the Harrison County Commission, the city of Clarksburg and the city of Bridgeport, WV to assist in any way during all emergency situations requiring communications. The SJARA is an ARRL Affiliated Club and a Special Service Club. The Vice President of SJARA (N8YPE) is the Harrison County Emergency Coordinator for ARES

The SJARA has a weekly emergency net on the 147.210MHz repeater on Tuesdays at 21:00 local time year round. All three of these repeaters are operated under the call sign "N8FMD" a long time Ham and a owner of a local radio communications business. Arrangements have been made to move the Net to another local repeater (146.685MHz) during the absents of the 147.210MHz repeater It is unknown when the towers will be replaced and of course very expensive to replace the three Amateur Radio Repeaters. In the last quarter of 2013 a substantial amount of money was spent by SJARA repairing and replacing the antenna for the 147.210MHz repeater by KC8AJH presently the owner operator of the repeaters.

SJARA is a 501(c) organization and would appreciate any monetary assistance since we are a very small club with limited resources. If anyone would like to help with donations please address them to "REPEATER" SJARA PO Box 752, Clarksburg, WV 26301

Welcome Gary KC2ULS from Medford NJ who retired with 25 years as the best special Ed. Teacher I ever meet and worked with for 9 1/2 years.
Gary will be a great help with Handicapped Hams on this net A Fellow Chaplain who gives his help all over NJ working with Hospitals and the US
He works even now for free every days to help kids on his own time for free.
He bought a TENTEC Eagle and is working towards his General now and brings kids to my home and DVRA W2ZQ Shack and NJ2AR in West Trenton NJ and to the JSARS NJ2AR Club in Toms River NJ as well for Radio Demos.
That's a three to five hour round trip from his home to pick up three or four kids from their homes for radio demos.
That's new hams in the making.
It gives me a chance to show Amatuer Radio to the kids that can't get to me on their own.
They are poor kids form families on hard times that need our help.
We make sure that they get feed too along the way or at the shack.
Thank You Gary KC2ULS for your time and hard work and I welcome you to the TENTEC Familkyfrom Gaye KB2YOA and Lloyd N2KPC

# 1445. TENTEC NETS Today Sunday 2-9-2014 and more

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-09 05:35:22 UTC
From: <n2kpc@...>
Topic: 1445  Message: 1445

Hello Everybody,
Don't forget the change of time and frequency for the 40 Meter net 1:30PM Eastern on 7.263 SFI 170 A-index023 K-4 and Geomag Field is Active, Sig Noise Level is S-3 to S-4.Conditions will only be fair,but
we will do our best.
On all bands I will announce the direction I have the Yagis pointed so on 10 meter you might not hear me until I and pointed your way. I will call each time I and changing my antenna heading so to give you the best chance to check in.
I will do the same for 40 and 20 meters.
For some of the new folks on the TENTEC Nets I am in New Jersey so if you are on 10 meters listen for me and other
calling. I always have the help for relaying stations from fellow check ins that I can work on the band that I have propagation at the time. 10 Meters changes sometimes very quickly with in a few seconds from dropping out and
coming back so keep on trying to check in. I am Net Control for the 10 Meter TENTEC SSB Net at 1:00PM Eastern on 28.440 USB.
K3UR, John is the Net Control for the 40 Meter and the 20 meter TENTEC SSB Nets that follow. I pick up the Nets after John, K3UR works everybody that he has propagation with. The I stay on 40 meter until work everybody that I can hear. After that I go and pick up the 20 meter TENTEC SSB Net
and stay there until I have checked in everybody that I and the kind relay stations can hear. This note is for the new Hams that are coming on to the TENTEC Nets. Remember that I am use a 14 element Yagi antenna for 20 meters and a 2 element 40 meter Yagi antenna which is on the same tower and it takes a minute or so to move it toward your direction maybe before you can hear me calling for check ins. I stay on the frequency until I check in all that I can hear.
The QRP, low power station and mobile station require priority so please listen for them and make a note of their call signs when you hear them if I can't so you can relay them too.
Have fun and enjoy the TENTEC Family on the Nets and free to ask any question you might have on the nets and on this Yahoo group.
I wish to Welcome the new blind hams on to the TENTEC Nets in and outside the USA.
I have had a great response from you both by email and the letters by mail you have sent me recently.
I have takes your notes and ideas and shares them with many people to work on solution to operating software,
hardware and antenna systems and whish to Thank Jim Wharton the President of TENTEC for his concerns and be there with a positive mind to help all us.
Folks, I tell you this because it is beyond the call of duty believe you me.
C U on the TENTEC Nets and don't forget WB1HGA Ron's TENTEC CW Net Monday night.

Hello Ten Tekkies!

A brief reminder the TT CW net on 7063 begins 00:30 Z (7:30 PM Eastern time).

This is a slow speed net (up to 13 wpm).

New comer or old timer are welcome.

Dust off that key. Connect them paddles.

This net is to promote CW activity and provide means to practice. "Breakneck speeds" are discouraged.

Up to now, I have been lax with the order of exchange.
I will use a new logger this week.
Please follow the order of exchange:
:
CALL, NAME, STATE, RST, RIG (does not have to be Ten Tec)

After I call QNI (looking for stations) please sign using the LAST 2 LETTERS of ur call.
When I acknowledge with AS (sent together), PLEASE stand by so I may add more stations to the que.

During the que, when I send the last two letters and it is ur call, send ur full call and proceed with the exchange.

see ya tonight!

Ron, wb1hga
TT CW NCS

# 1458. 64 That is the Question

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-10 17:03:26 UTC
From: <n2kpc@...>
Topic: 1458  Message: 1458

On Sunday I had 64 check ins on 20 meters in addition to John's K3ur 20 meter list.
There were many new faces on the TENTEC SSB Nets and the a great thing. I actually closed the 20 meter net at 7:08 pm
because they keep coming out of the woodwork and that is ok by me. Some people just were tuning around and found the nets and some were told about the TENTEC Nets by a fellow Ham.
My question will be answered when K3UR John's new list comes out later this week. How many check ins on the Nets? How many New check ins did we have and only one more sign up for the TEN_TEC_RADIO_NET on the Yahoo Group
to reach 200.
Think about coming to the TENTEC Hamfest 2014 in TN. My Wife and I are and put in for the time off at work already.
Now is a good time to plan and start saving up for the trip to TN because there is so much to see and do right near the TENTEC Factory. There are many great Churches near by visit on Sunday too.
Right behind TENTEC at the other end of the runway is the New Tennessee Museum of Aviation http://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=1&cad=rja&ved=0CCcQFjAA&url=http%3A%2F%2Ftnairmuseum.com%2F&ei=EwP5UsTbM5SqsQS9wYGACA&usg=AFQjCNEPVmeDbzrztcFxo-PBiZd5UNlzRA&sig2=E-wui8qxpQkXVhCYAevqRg&bvm=bv.60983673,d.dmQ along with everything else. Don't want to drive then fly, Pigeon Forge is 24 mi from Mc Ghee Tyson Airport (Knoxville, TN).
Mc Ghee Tyson Airport (Knoxville, TN). Right now, 27 airlines operate out of Mc Ghee Tyson Airport.
Hope to see many of the TENTEC Family at the 2014 TENTEC HAMFEST this year, God Willing.
The 64 dollar question is something to look forward to each week because of each and everyone of you.
Thank You All for your support for the TENTEC Nets and the TENTEC Family.

73,
Lloyd N2KPC

# 1459. tonite's net

Yahoo group: ten_tec_radio_net (2007 — 2014)

From: Gandalf The Gray
Topic: 1459  Message: 1459

Well this certainly put a damper on tonight's CW net.

I have RF in the shack, causing me paddles to go berserk.

I tried to connect a straight key but couldn't get that to work.

I ended the net logging K8maz using a microphone for CW.

Man I was terrible doing that.

The band was not too healthy tonight either.

# 1463. 48 first time checkins New Record on 20 meters 137 checkins

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-12 04:19:05 UTC
From: <n2kpc@...>
Topic: 1463  Message: 1463

48 first time checkins Isn't that a wonderful tribute to the TENTEC Nets. I welcome you to the TENTEC Nets.
What positive Hams John, K3UR and I had check in to the nets. A great interest in what is going on with Amatuer Radio
with good questions asked and the live feed on QRZ by John, KC2QMA was the icing on the cake for young and old.
I wish to thank Jim Wharton President of TENTEC and am proud to tell the New Checkins that "You will receive a very nice certificate signed by the President of TENTEC Jim Wharton for 10, 25, 50, and 100 checkins sent to you from the TENTEC Factory in Sevieville, TN USA".
Forty-eight first time checkins is Amazing for any net, that's the future in progress for us all in the making.
Many of the new checkins said they will be back and found the net interesting,
A NEW RECORD of 137 checkins on the 20 meter TENTEC SSB Net, Jon K3UR check in 73 while I had 64 and that made it all worth while to stay on the air until 7:08PM to get everybody check in and answer all the question they had
al well to let the new checkins know about the live feed on QRZ, the TEN_TEC_RADIO_NET group on Yahoo, the Net times, the TENTEC Certificate program and the fact that they can ask any question that they have on the air or the Yahoo Group. So pass the word on when you talk to a new Ham that you meet and this will be just the beginning
of the TENTEC Nets. What a great promotion for the HF bands. Remember to tell the new Tecks about the 10 meter net too. That gives them a place to learn and feel at home. What a great place for their first contact to happen. How cool is that.
73,
Lloyd N2KPC

Don't feel bad. I have problems with the ladder line.
Me have icing on the darn ladder line causing rf issues
In shack. I never have b4.
Then we never have a winter like this either in MA.
We got snow/rain mix overnight tonight changing to rain all day tomorrow then ending into the nx night with ice.

Two months seems like a long way for Spring.

Like Alaska where it snows atop the leaves, rain on top of frozen snow and ice is no fun either in MA.

Yes Lloyd I wonder who that might be, and how did I know to join the TT sideband net group! Anyway, since I am located about 4 miles North of the W2ZQ shack, we had similar amounts of snow as Lloyd down in Mount Holly; about 10 to 12 inches. The snow thrower was able to deal with the snow and ice chunks, albeit slow in 1st gear. 73 for now,
Joe

From: <n2kpc@...>
Topic: 1500  Message: 1500

On Monday morning, Ringling Brothers Blue Unit Circus Train will be making the 100 mile trip from Philadelphia to Brooklyn, NY's Barclay Center. Definitely a CSX move up the Trenton Line. Weather forecasts look promising with no snow storms in the forecast for this day which is also President's Day. 2-17-2014

CSX train will be on 160.980 FM VHF Railroad Frequency. I will be doing a photo shoot of the train at West Trenton, New Jersey SEPTA Train Station just 1.5 miles from the W2ZQ Club Station.
After the train goes thru " back to the shack " for DX, etc.
If you in the area let me know if you wish to join us.
Att. Steve KC2VDL and his Son Alex KC2VDM, Railfans as well.
Bring you photo gear and work radio all in the same day.
73,
Lloyd N2KPC

# 1502. Which ATU?

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-15 11:02:24 UTC
From: <keith@...-online.co.uk>
Topic: 1502  Message: 1502

I am thinking about getting a new ATU and would appreciate some thoughts on the following 2 tuners.

Thanks to Rick DJ0IP / NJOIP for his web site and help getting this far.

The choice has come down to the Ten Tec 238c or the Palstar AT2KD.

In the UK the TT cost over $1,500 ( (see for details - http://wsplc.com/antennas-tuners/antenna-tuners.html?manufacturer=19 ) and ouch! The Palstar cost $800.
My choice, money not being an object would be the TT but can I justify spending nearly double on the TT, is it twice as good or last twice as long?

Any thoughts etc much appreciated.

Keith M0 RSJ

# 1503. RE: [ten_tec_radio_net] Which ATU?

Yahoo group: ten_tec_radio_net (2007 — 2014)

Topic: 1502  Message: 1503

Keith,

“Value” is a very dependant term.

The Ten-Tec 238 tuners will match impedances that most other tuners can’t, especially if you take advantage of the provision on the back panel for adding more capacitance.

If the Ten-Tec can get you QRV on a band (say 160m) where the Palstar can’t, then the question becomes “how much is being QRV on 160m worth?”

On the other hand, if both tuners will match all of your antennas just fine, then the clear answer is “NO, the 238C is not worth it.” After all, the AT2KD is simpler to use than the 238C.

Let me give you an example. One of my favorite antennas for a city lot is a vertical dipole fed with openwire. I typically build it on an 18m Spiderbeam fiberglass pole with 9m (29.5’) per side. My Model 238 and my Model 238-B have no problem matching this on 160, 80 and 40m, but I use an external balun. I also sometimes need an external capacitor, depending on feedpoint length. My MFJ-986 Differential-T tuner (which is nearly identical to the AT2KD – except not as well built) has no chance to match this on any of the bands except 40.

On the other hand, for my 80m OCFD antenna where some of the 8 bands it covers have SWR just over 3:1, I use the MFJ-986 instead of the 238 because of ease of use.

It’s horses for courses.

Once you define your course, then you can choose your horse.

73 –

Mr. Ed

Hi Rick Thanks (again) for the advice.

My plan is to use 40, 80m and possibly 160m (I will add some capacitance for top band at a later date), but mainly 40 and 80m at this time. Not to concerned about the higher bands as a have resonant antennas.
The current antenna I have for the 40, 80m bands is a 132 ft doublet fed with 600 ohm open wire feeder at approx 8m (24ft) above ground.
Here are the readings from the MFJ analyzer -

MFJ-259 readings from a Dipole at 24ft (8m) above ground
Dipole - 128ft (38m) top, fed with 40ft 8” (12.4m) of open wire feeder, 13ft 1” (4m) of 213 coax with 16 ferrite beads around coax at bottom of feeder to form a current choke
Frequency
‘R’ resistance
‘X’ reactance
Impedance
SWR

Hi,

I use the Palstar AT2KD with my two Ten-Tec radios and Ameritron amplifiers.  I have had it for over a year and I am very pleased with it's easy and fast operation.  QST had a review of  this tuner and others in the past 12 months.  You might want to access the info on the ARRL web site.  The Palstar was the choice of the reviewer for his personal use.  Check my QRZ page.

I am thinking about getting a new ATU and would appreciate some thoughts on the following 2 tuners.

Thanks to Rick DJ0IP / NJOIP for his web site and help getting this far.

The choice has come down to the Ten Tec 238c or the Palstar AT2KD.

In the UK the TT cost over $1,500 ( (see for details -
 http://wsplc.com/antennas-tuners/antenna-tuners.html?manufacturer=19 ) and ouch! The Palstar cost $800.
My choice, money not being an object would be the TT but can I justify spending nearly double on the TT, is it twice as good or last twice as long?

Any thoughts etc much appreciated.

Keith,

When you took those readings on the MFJ-259, how did you connect the openwire feedline to the 259?

Was it going through a balun or through the matchbox, or how was it connected?

Subject: RE: [ten_tec_radio_net] Which ATU?

Hi Rick

Thanks (again) for the advice.

My plan is to use 40, 80m and possibly 160m (I will add some capacitance for top band at a later date), but mainly 40 and 80m at this time. Not to concerned about the higher bands as a have resonant antennas.

The current antenna I have for the 40, 80m bands is a 132 ft doublet fed with 600 ohm open wire feeder at approx 8m (24ft) above ground.

Here are the readings from the MFJ analyzer -

MFJ-259 readings from a Dipole at 24ft (8m) above ground

Dipole - 128ft (38m) top, fed with 40ft 8” (12.4m) of open wire feeder, 13ft 1” (4m) of 213 coax with 16 ferrite beads around coax at bottom of feeder to form a current choke

Frequency

‘R’ resistance

‘X’ reactance

Impedance

SWR

Those were through the balun, coax etc, just did them as I sat beside the radio.

Hang on I post the ones I did at the bottom of the 600 ohm feeder.

Leo, the AT2KD is a lovely matchbox, but it is a Differential-T with limited impedance matching capability. It most likely will not have enough capacitance to match Keith’s short antenna on 160m. With the Model 238, it is likely to match it because of its extra switched capacitors, but if that fails, then adding an external capacitor across the terminal on the back will match it. I know. I’ve done it before.

By the same token, my MFJ-986 Differential-T which is almost identical in circuitry to the AT2KD was not able to match it.

For 80 thru 15m, most matchboxes will match anything you throw at them, but it can get tricky on 160 and 10m.

Hi,

I use the Palstar AT2KD with my two Ten-Tec radios and Ameritron amplifiers. I have had it for over a year and I am very pleased with it's easy and fast operation. QST had a review of this tuner and others in the past 12 months. You might want to access the info on the ARRL web site. The Palstar was the choice of the reviewer for his personal use. Check my QRZ page.

Rick I hope the up loads go all ok.

How long is your feed-line? Answer = 12.4m or 40ft.
What balun? Answer = I have put 16 ferrite around the coax at the bottom of the 600 ohm feeder, these ones http://www.ebay.co.uk/itm/16-x-LARGE-EMI-FERRITE-TUBES-ROUND-/390749160797?pt=UK_Mobile_Phones_Communication_Coax_Cables_Connectors&hash=item5afa77055d http://www.ebay.co.uk/itm/16-x-LARGE-EMI-FERRITE-TUBES-ROUND-/390749160797?pt=UK_Mobile_Phones_Communication_Coax_Cables_Connectors&hash=item5afa77055d

And, have you attempted to match this with any matchbox yet? No!

Here the antenna as it is at the moment - Dipole - 128ft (38m) top, fed with 40ft 8" (12.4m) of open wire feeder, 13ft 1" (4m) of 213 coax with 16 ferrite beads around coax at bottom of feeder to form a current choke

Thanks for the help

Keith

Rick

The readings on the analyzer do jump around, but only on 80m, ok on the rest 40m, 20m, etc and upwards. Yes it is work in progress,if I fit more of the same ferrites would it stop it at 80m, they are so cheap another 16 is really easy to do, what do you suggest?

Here is what I would expect to see:
· Very low impedance on 160m (probably less than 10 Ohms) My reading agree with this
· Close to 70 Ohms on 80m Again my reading are close at 100 ohm
· 2k Ohms on 40m and higher bands No, I am getting 60 ohms, on the end of the coax in the shack though! So ok, It is off the scale at the bottom of the 600 ohm feeder as you say.
Do you own a matchbox now, or are you waiting to attempt to match it with the new Matchbox?
I have a MFJ-962d and I am connecting with coax rather than via the in built 4:1 balun. It matches ok on 40m but struggles on 80m. I have not tried 160m.

Keith

Actually you're numbers are not that far off Keith.

When you get ready to use the antenna, here is what you need to do.

Keep your Maxwell choke (balun) at the TX end of the coax but insert a very good 1:1 Guanella balun (choke balun) at the junction of the openwire and the coax. This is a very important point for blocking the common mode current.

It is really tough to try and block common mode current with one device (balun) for all bands 160m thru 10m.

2 reasons:

1. Best case, we need different core material for the various ranges – (#31 for 160 and 80m, #43 for 40 and 30m, and #61 for 20m and above).

2. We need different amounts of turns in a toroid for the different bands (more for 160, less for 10m).

The very best compromise is the solution proposed by GM3SEK in RSGB's Radcom.

I will attach the file for you and cc you on the reply.

You can also view a picture of one of the chokes that I built, here:

<http://www.dj0ip.de/cmc-test/the-components/the-chokes/>
http://www.dj0ip.de/cmc-test/the-components/the-chokes/

(it is "C4" on that page)

As you see, Ian designed 3 chokes based on very cheap hunks of ferrite available from Farnell:

(Fair-Rite 2643167851 = Farnell 1463420). I purchased mine from Farnell in the UK.

What you do is build and use the one(s) needed for the band(s) you want to use with the antenna.

Simply wire them in series at the junction of the openwire to the coax.

Then, as I said, at the TX use the choke you have already built.

THAT WILL WORK FINE ON ALL BANDS!

Behind that use a matchbox capable of coping with the impedance needed to be matched.

Unfortunately I cannot say if the AT2KD will work on 160. I doubt it.

I'm 98% sure it will be OK on all other bands.

The Model 238 will work on ALL bands no worry!

More below embedded within your comments… >>>>>

The readings on the analyzer do jump around, but only on 80m, ok on the rest 40m, 20m, etc and upwards. Yes it is work in progress,if I fit more of the same ferrites would it stop it at 80m, they are so cheap another 16 is really easy to do, what do you suggest?

>>>>>> If you build the chokes I spoke of above (from GM3SEK) that will stop the jumping.

Here is what I would expect to see:

· Very low impedance on 160m (probably less than 10 Ohms) My reading agree with this

· Close to 70 Ohms on 80m Again my reading are close at 100 ohm

· 2k Ohms on 40m and higher bands No, I am getting 60 ohms, on the end of the coax in the shack though! So ok, It is off the scale at the bottom of the 600 ohm feeder as you say.

>>>>>> This makes no sense to me. A “full wavelength” dipole in free space is around 4k Ohms impedance, but here on planet earth about half that. The only way your readings can be accurate is when the transmission line just happens to be an exact quarter wavelength or ¾ wavelength long on 40m. In that case it would transfer it to low impedance – in which case any matchbox can match it just fine on these bands.

Do you own a matchbox now, or are you waiting to attempt to match it with the new Matchbox? I have a MFJ-962d and I am connecting with coax rather than via the in built 4:1 balun. It matches ok on 40m but struggles on 80m. I have not tried 160m.

>>>>> I doubt that you will be able to match on 160m with your current matchbox. The problem is, that matchbox has variable capacitors with about 300 pF. You need about 500 pF to get a good match on 80m and about 1000pF (sometimes more) for a good match on 160m.

>>>>>What happens when you don’t have this much capacitance is, you sometimes find a match by using a different value of inductance, but then the efficiency sinks like a rock. You end up having a nice space heater for the shack.

>>>>>The beauty of the Model 238 is, it does not even try to have a big enough variable capacitor. Instead it uses a 400 pF variable capacitor, then switches up to 4 additional 400pF fixed capacitors in parallel. This gives you up to 1600pF available. If the antenna is really short, you can even add another 1000pF (comes with the matchbox) externally on the back panel, giving you 2600pF. No other matchbox on the planet offers this… except for home brew matchboxes.

>>>> Here is what I would do:

--FIRST OPTION: buy a used Model 238A or Model 238B. Of course a Model 238C would be great/better, but here in EU they cost quite a lot.

--SECOND OPTION: BUY THE AT2KD and use it on all bands 80 thru 10. I don’t expect it to work on 160. Build yourself a simple S-Match to match it on 160m. You can do that for less than 100 quid. I’ll show you how.

Keith,
For what it's worth, I've had the TenTec 238B for over 2 years now and I am extremely happy with it. I've had various other tuners but none were as good as the 238B. The new 238C has the dual meter which makes it even better yet. What I am very disappointed about is that your cost in the UK is twice as much as in the USA, sounds to me over priced.

Believe me Tony, it’s much cheaper than moving to the states! ;-)

I know, I did that in 2007. Bought a Model 238B and saved about $700 over the European price.

Then I moved back to Europe in 2011.

Each move cost me about $20K, so for $40K, I saved $700 on the tuner. ;-)

Subject: [ten_tec_radio_net] Which ATU?

I am thinking about getting a new ATU and would appreciate some thoughts on the following 2 tuners.

Thanks to Rick DJ0IP / NJOIP for his web site and help getting this far.

The choice has come down to the Ten Tec 238c or the Palstar AT2KD.

In the UK the TT cost over $1,500 ( (see for details - http://wsplc.com/antennas-tuners/antenna-tuners.html?manufacturer=19 ) and ouch! The Palstar cost $800.

My choice, money not being an object would be the TT but can I justify spending nearly double on the TT, is it twice as good or last twice as long?

Any thoughts etc much appreciated.

Guess I made the right move Rick. I immigrated from the Netherlands (ex PA0MIH) to Canada in 1970 and never had a moment regret.

?

Believe me Tony, it's much cheaper than moving to the states!? ;-)
I know, I did that in 2007.? ?Bought a Model 238B and saved about $700 over the European price.
Then I moved back to Europe in 2011.
Each move cost me about $20K, so for $40K, I saved $700 on the tuner. ?;-)

Part of the "twice as much" is the 20% sales tax in Europe, and the $100 it costs to ship it to Europe.

Keith,
For what it's worth, I've had the TenTec 238B for over 2 years now and I am extremely happy with it.? I've had various other tuners but none were as good as the 238B.? The new 238C has the dual meter which makes it even better yet.? What I am very disappointed about is that your cost in the UK is twice as much as in the USA, sounds to me over priced.

Well, ur research should tell you a dipole is a dipole.
It matters not which company makes it.
However, if this is for the TT Net, and you do not wish to make one,
another option is "Buddi Pole".

I'm waiting for Spring to arrive (place laugh track here) so I can raise me tri bander.
(at least with the buddi pole, you can raise it on ground)

"diggin' out heah, in MA.

Ron, I agree that a dipole is a dipole as far as bi directional pattern is concerned. My problem is of a structural one. I'm on top of a 2000' foot mt with the worst icing conditions. The ant will be on my 70' tower to boot.  It has to be tough or it will be a pile of aluminum in the spring.
Look for u tonite on the TT CW Net
Andy, W3LI

A Wednesday net is a great idea. In order to remain active in ham radio, I've taken a part-time security position, afternoons and evenings, Sunday and Monday. At least I hit my 50 check-ins before this started.

We've come a long way with the nets and this forum during the last year. All the naysayers early on... well... so what?

There's never any negativity on our nets or this forum despite being mostly un-moderated and uncontrolled.

I suspect it is quite a bit sturdier than either the Cushcraft or the HyGain, so if anything is going to survive your harsh WX, that’s probably your best bet.

Meter to ft. conversion is dirt simple. I don’t know why so many people shy away from it.
1m = 3.28 ft. (I generally use 3.3 when converting in my head; ball park number)
1 ft. = .3048m (30.48cm; for guestimating I use 30.5cm/ft. )

If you don’t want to do that, there are online conversion calculators:
.• Convert Meters to Feet: http://www.calculateme.com/Length/Meters/ToFeet.htm
.• Convert Feet to Meters: http://www.csgnetwork.com/csgcvtftin2meterscalc.html

ARRL QSL Cards .15 cents if you order 1000.
Not a bad looking QSL Cards.
Check out their website if you need some.

#1 - ARRL Centennial Card 2014

Option #2 - ARRL Founders Card

Option #3 - Gold Centennial Card
I like no.2 with the old man himself.
73, Lloyd N2KPC

# 1569. FS Corsair II

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-02-24 15:48:03 UTC
From: Paul K.
Topic: 1569  Message: 1569
Attachments: 2 described; binary payloads are missing from this source WARC

I am offering my Corsair II for sale.

Corsair II. Model 561, Serial Number 32A10469.

I have had it on the bench and checked all bands for receiver sensitivity and power out put.

I measured the receiver against my ear. I didn't set up a meter and do a complete signal to noise measurement. I used a HP 8640M and tuned for best signal at -120dBm. (.3 Micro volt) Considered if the signal a copyable signal for my ears. Not very scientific, but a swag. At -110dBm (1 Micro Volt) it is solid copy.

I measured the power out put on all bands at lower and upper end with a Bird 43, into a Bird 50 ohm end load. Solid 100 watts all bands. I used the desk mic off my Omni 6 opt 3, to test SSB. All power out responded properly when tuned per book instructions. I also listened on the Omni on 40 meters and 15 meters. Sounded good to my ears.

The rig does not have any of the CW filters, only the 2.8 SSB filter.

Cosmetically it is a 7+. There are some marks on the top, which may be rubbed out. There is very light grey paint over spray on the back left corner of the cover. It looks like someone painted something sitting near the rig and didn't cover the Corsair up. (Not very smart.) It has what I would call the normal wear and tear considering its age. Definitely not banged up, and no evidence of being in a smokers shack. Clean inside.

I did not test the keyer and its memory system, other than to be sure it keyed dots and dash. I have the downloaded book, and a new unfused power cable with the 4 pin connector and a Power Pole connector attached, plus the 2 pins you will need to connect the internal power switch.

I am asking $375.00 Plus Shipping and Insurance. If you choose to buy this rig I will back up the deal with a full refund if you decide within 2 weeks after you receive it that you don't want it.

I operated this rig in the shack for several months on mostly CW, and some SSB. I believe it to be a better sounding receiver than the Omni 6 Opt 3 or my Orion. Just something about these old receivers. A set of CW filters would make this rig sing on CW. If I were younger and into mobile operating this would be a terrific mobile rig.

If you have any questions please call. (970-282-9880) I would like to
see this go to a Ten Tec home for safe keeping and endless enjoyment...
hi hi

Hello again Ron / WB1HGA,

First, I'm not vying for a position here, but if you and John approve it, I would volunteer as CW Net Backup NCS when (for what ever reason) you cannot conduct the Net.

I've ran numerous cw nets in the past but anymore I don't want to become dedicated on a regular basis as QNN.

If you do for see in the future, that you won't be available to run the net you can call me @ 304.638.4835 and give me a heads up.

.....food for thought

Roger / KI8DU

John,
This works for me without a doubt just in case I get a bout or get a case of the gout because I will be out.so its nice to have guys with clout to help us all out.
I want to say Thank You to all of the TEN-TEC Family that have helped with relaying anybody, anytime and anywhere for us all. YOU made this Net what it is and what it is a Family type Net. I know that many people sit thru all of chatter info that we tell the new Hams that check in until the end of the Net just to be there to help if they can like Andy, W3LI in PA who is better than a guard dog to chase a crook back over the side fence with the crook gets closer than three KHz, I mean three feet, HiHi.
I say to all who have a little antenna system in their attics who have also relayed check ins to the TEN-TEC Nets Thank You Too. Yes propagation was with them and they jumped right in to give a hand too. A little bit adds up to a lot.
73,
Lloyd N2KPC

Ray,

Many years ago there was an article in 73 magazine using just that. Connect the shields together at the bottom and ground it to the tuner. At the top connect the shields together but leave it floating. The two center conductors at the top go to each one half of the dipole. At the bottom connect the center conductors to each on the balanced output of the tuner.

I used that set-up for years and it worked great. The advantage is that you can run the dual feed line anyway you wish along metal surfaces etc. Just make sure that you loop the RG-58 over the top of the top center insulator so that the ends face downwards and water proof as best you can. Good Luck es 73.

Tony VE3DWI.

Tony,
This is a copy of what I send John every week.
Just double space everything.
I send any corrections later if needed.
I double check my info on QRZ and I tape the Net if needed like on a rough contact.
That takes me about 2 to 3 1/2 hrs to do after the net then pack everything up and drive 45 min. to my home from the shack.
I put page one, date, and Start 10 meter list then end 10 meter list. Then page two etc.
Corrections are written in red ink so they are easy to find in the future on my paper work.
This is a rough copy, don't pick it apart guys
This is to give you a idea of what works for me because I have to do it long hand.
73,
Lloyd N2KPC.

Careful with the interpretation of “any way you wish”.

You should still try to run the double coax away from the dipole at a right angle.

The double coax is just as susceptible to picking up Common Mode Current as a single coax or unshielded openwire is.

Like always, run your coax at a right angle as far as you can (as far as convenient) away from the antenna.

THEN I agree with what Tony wrote.

Some people think using double coax will shield the openwire feedline from external noises, etc.

Nonsense. In fact it can possibly be worse.

Here’s why:

Common Mode Current (the source of the noise our feedlines pick up) occurs when the current flowing on the two lines of the feedline are not equal and opposite in polarity. With Coax, CMC is only picked up on the outer surface of the shield. This always causes the current flow to be unequal.

With openwire the scenario is slightly different. CMC can flow on both wires. However again it becomes a problem when the current flow is not equal and opposite in direction. When one side of the openwire is closer to the source of the CMC than the other, that side picks up stronger current.

SOLUTION: Twist the openwire about one turn per meter (every 3 ft.) over its entire length.

This assures the current caused by the CMC source is picked up equally strong on both wires.

And since it flows in opposite directions, it cancels itself out.

MY GUESS (I don’t know because I have never tried it), double coax will be to stiff to enable twisting, thus it will be more susceptible t picking up CMC than normal openwire would be. And it is a darn sight more expensive too! I SEE NO REAL ADVANTAGE IN DOUBLE COAX, unless like Tony said, you have to run it across a metal roof…but then you can build stand-offs for normal open wire for that short run.

BTW, there have been two articles published on using double coax.

The original one was the “Spencer Multiband Dipole” published by J.W. Spencer, W4HDX, in the February issue of 73 Magazine in 1984.

The second was a joint publication by John Belrose, VE2CV and Peter Bouliane, VE3KLO, entitled “The Off-Center-Fed Dipole Revisited”, published in the August 1990 issue of QST.

I saw little merit in the Spensor antenna, but the Canadian version had the advantage that the feedline impedance was 190 Ohms. In the modeling I have done together with DJ1AT, we have determined that 180 Ohms is probably the best feedline impedance to use if you want as many bands as possible… except we can’t find anything with that impedance. The solution proposed by Belrose was spot on! (Just a little too heavy for my fiberglass poles). In this case, the double 95 Ohm coax was used intentionally to get to the 190 Ohms.

Double RG-58 will give you 100 Ohms – nothing special. The only reason I can think of to even use such a solution is, you have the coax already and don’t have any openwire available, and you’re in a pinch for time. In general, I would avoid that type of solution and use proper openwire.

Rick,

Off course you are correct as far as running the coax away at right angles. It's always best to do that. If the center insulator is supported by the tower, or otherwise, the weight of the line is not that important. One other thing is to make sure that both lengths of RG58 are of EQUAL length. As far as CMC is concerned, good advice. At the time when I had that antenna, it did the job for me and worked well as an all-band antenna. Made lots of contacts with it. Your advice is always appreciated Rick. 1984!!! heck I must be getting old hi..hi.

From: ron
Topic: 1622  Message: 1622

Ten Tec CW net every Monday night on 7063 +/- 0030 Z (7:30 Eastern Time).

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AK (sent together) means STANDBY.

When do I ck in?

After u hear QNI, and only then; send the last two letters of ur call. NCS will acknowledge by repeating ur last two letters of your call followed by: “AK” This means STANDBY. I REPEAT, STANDBY. This gives others a chance to sign in, and reduces interference.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

keep warm!

Bill, if anybody is illegal, it has to be some of those guys who actually brag about running 10KW during their contests. Some of them run high power, splatter all over the bands and then try to tell you that it is illegal to interfere with "their contest", when you are simply just trying to find the net.

If there was ever a "bull in the china shop", it usually occurs during these contests. I have to give the good guys credit though, who act like gentlemen during their contests.

Bill, don't lose any sleep over this and do not give up, because the majority of the Amateur Radio Operators
are thoughtful and show respect to others.

TODAY Monday 14:05 UTC
Just tune any vhf scanner or 2 meter to 145.800 and you will hear the ISS talking to the school kids, Do not call them, just for the school kids this time.
When you do call another time the you transmits on the uplink 144.490 and listen on the downlink 145.800 Just give your call once SLOWLY
with standard phonetics then wait 30 seconds because 95% miss their report because they double with the ISS.
A discone works very well, but you will hear them great with a rubber duck antenna on you HT. You hear them on any antenna.
73, Lloyd N2KPC

Upcoming ARISS contact with Central Square Middle School Amateur Radio Club, Central Square, NY

An International Space Station school contact has been planned with participants at Central Square Middle School Amateur Radio Club, Central Square, NY on 03 March. The event is scheduled to begin at approximately 14:05 UTC.

The duration of the contact is approximately 9 minutes and 30 seconds. The contact will be direct between NA1SS and KC2ILA. The contact should be audible over the portions of the eastern U.S and adjacent areas. Interested parties are invited to listen in on the 145.80 MHz downlink. The contact is expected to be conducted in English.

The Central Square Middle School (CSMS) has approximately 1000 students in grades 6, 7, and 8. CSMS is actually 3 schools within a school that function on their own. Each school has grades 6, 7, and 8 and is identified as House 1, House 2, or House 3. Students are assigned to a grade-level team within a house.
Students in grades 7 and 8 can participate in interscholastic athletics of many types. There are also many clubs that all grade levels can participate in throughout the year including (to name a few) Leadership (Student Government), Fishing Club, Chess Club and Amateur Radio Club.

Amateur Radio Club, KC2ILA, has been active at CSMS for more than two decades. We acquired our call sign in 2001, but used our club advisor's call sign before that. Over the years we have been involved in various electronic construction projects, KC2ILA is always a presence on the air during School Club Roundup in February, and we are always tracking spacecraft carrying Amateur Radios.

Over the years several students have spoken with astronauts on space shuttles and students at CSMS spoke with 5 of the 7 NASA astronauts and several cosmonauts, who resided on the Mir Space Station. In September 1994 CSMS organized a scheduled contact between astronauts on Space Shuttle Discovery (STS-64) and students from 8 school districts in Central New York. The radios for the contact were located at the Museum of Science and Technology (MoST) in Syracuse, NY.

In the spring of 2013 several club members worked on preparing the application for another scheduled contact, this time with the International Space Station. We are hoping this conversation goes as well as our first scheduled contact!

Participants will ask as many of the following questions as time allows:
1. Are you going to be taking part in the Quantum Entanglement Experiment and if so what equipment will you be using?
2. Can you tell us of any direct, recent benefits that have come from research on the ISS that could not be done on Earth?
3. Are there any experiments being performed for private companies on ISS?
4. Do you think the ECLSS being used on ISS will be similar to the one that will be used when humans travel to Mars? Will it solve our water problem when traveling to Mars?
5. Have any of the algorithms from the NASA SPHERES Competition been used on ISS?
6. Is it hard to control the space station as it orbits Earth?
7. What experience on Earth is most comparable to the feeling of weightlessness?
8. What do you do to prepare for a spacewalk and how long do preparations take?
9. How often do you receive supplies and what sort of items do you get?
10. Has the space station ever been hit by debris and if so is there a way to avoid this?

11. Where does all the waste from ISS go?
12. What occurred to make you want to work on the space station or even be up in space?
13. Is it different or harder to sleep in microgravity?
14. What was your biggest shock when you got to space?
15. Is it crowded on ISS?
16. What do stars look like in space?
17. Does it feel like you are at home when you are on the space station?
18. How do you exercise in space?
19. Are you able to take showers in space?
20. What is your favorite thing to do for fun in space?

Hi John,
I have to agree with you. I think a good majority of the guys are courteous and try not to interfere with others. Unfortunately it is the few who don't care as it is all about them and getting their score up in the contest results. I guess over the past 50+ years as a ham, I've lost the desire to operate in contests. The only one I do now, and it really isn't a contest is the "Straight Key Night" the ARRL runs every New Years Eve.

I always use my old straight key along with one of the boat anchor setups I have here in my shack. This year I used my old Knight T-60 and an HQ-110A. I had some TX troubles so I only made a few contacts but had fun.
Have a great week! See you on the Ten-Tec net next weekend for sure! ;-)
73,
Bill

Hello Ten Tekkies,

Because of this very unusual winter, the storms has done a job on my wire antenna. Usually, for many years, all my home-made antennas withstand the New England winters.

We are suppose to have a somewhat decent end-of-the-week wx with temps in the upper forties. (I'll take it) This will allow some snow melting away (yaaaaa) and be rid of ice.
I will use this time to repair the antenna.
I hope to be on the air again for nx Monday night.

KI8DU (Roger) in WV, will be filling in my place
for tonight.
Let's have a show of support for Roger.

Let's experience a smooth running net.
Please observe the same protocols and exchange.

May the propagation gods be with you.

Hello John,
I am running a corsair II with the matching power supply 961. It has the over voltage and over current protection in the power supply. If I am using an external, 3rd party power supply, I use an airpax circut fast acting circuit breaker. See the attache .pdf file. Hope this is of some help.

# 1658. ARISS contact with Rock Bridge Elementary School, Columbia, Missouri

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-04 21:40:25 UTC
From: <n2kpc@...>
Topic: 1658  Message: 1658

Listen on 145.800 VHF FM Time 14:00 UTC = 9:00 PM Eastern Time
73, Lloyd N2KPC
http://forums.qrz.com/attachment.php?attachmentid=171805&d=1393868895Upcoming ARISS contact with Rock Bridge Elementary School, Columbia, Missouri

An International Space Station school contact has been planned with participants at Rock Bridge Elementary School, Columbia, MO on 05 March. The event is scheduled to begin at approximately 14:00 UTC.

The duration of the contact is approximately 9 minutes and 30 seconds. The contact will be direct between NA1SS and KM0R. The contact should be audible over the middle U.S. and adjacent areas. Interested parties are invited to listen in on the 145.80 MHz downlink. The contact is expected to be conducted in English.

Rock Bridge Elementary School is a K-5 public school operating within the Columbia Public School District. It is located in Columbia, Missouri. The school offers a core curriculum, with emphasis on science, technology, and math. Rock Bridge has a strong belief that in order to prepare students for success in the 21st century, today's learners must be able to think critically and creatively, work collaboratively, and master an ever growing list of skills. The student body is made up of 672 students from all over the Boone County, Missouri area. The school has 24 classroom teachers, 6 special area teachers, 5 teaching assistants in addition to 2 pre-school teachers. The school's mission is to cultivate learners and leaders who are inspired, able, and prepared to make a positive difference in the world.

Participants will ask as many of the following questions as time allows:
1. How big does the moon look from space?
2. Are the foods you eat healthy?
3. What does zero G feel like?
4. What does it feel like to look back at Earth?
5. What do the stars look like from space?
6. How heavy is a space suit?
7. What experiments are you working on?
8. Do you ever worry about floating off into space?
9. What happens when you hit the atmosphere?
10. How many years of training does it take to be an astronaut?

11. What activities do you do in outer space?
12. What's the scariest thing that's ever happened at the Station?
13. Where do you sleep?
14. Can you see any planets from the space station?
15. Is time slower in space?
16. Why isn't Pluto a planet?
17. What does the Earth look like from space?
18. What's your favorite thing about being in space?
19. I read you get taller while in space, what other changes do you notice about your body?

20. How do you train for being weightless?
21. On a scale of 1-10, how would you rate space food?
22. What is your favorite experiment or project you are currently working on?
23. What can people learn from outer space?
24. Do you get to talk to your family while you're in space?

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating countries.
ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning.

Further information on the ARISS program is available on the website http://www.ariss.org/ http://www.ariss.org/ (graciously hosted by the Radio Amateurs of Canada).

# 1662. Massive gas explosion 1700 ft away from W2ZQ Shack in NJ

Yahoo group: ten_tec_radio_net (2007 — 2014)

Topic: 1662  Message: 1662

1700 Feet from where I do the TEN-TEC Nets 55 units damaged, 1 dead.
Don't know if the shack or antennas were damaged yet. 73, Lloyd N2KPC
EWING http://www.nj.com/ewing-- A massive gas explosion at a Ewing condo complex http://www.nj.com/mercer/index.ssf/2014/03/house_explosion_in_ewing_with_multiple_injuries_reported.html this afternoon injured seven utility workers, destroyed at least one unit and touched off a raging fire that destroyed other nearby homes, police said.
The blaze at the South Fork at Ewing complex continues to burn this afternoon as rescue workers conduct a house-to-house search for other possible injuries, Ewing police Lt. Ron Lunetta said this afternoon.
Two workers for a private utility contractor who struck the gas line and five workers for PSE&G who responded to the reported gas leak were injured in the blast, Lunetta said. All seven were taken to area hospitals.
"It’s a pretty horrific scene down there,” Lunetta said.
L.F. D’Amelio, chairman of the department of surgery and director of trauma services at Capital Health, said five people were being were treated at Capital Health Regional Medical Center in Trenton, and two at Capital Health Medical Center – Hopewell. Some are undergoing surgery, he said.
There were no burn victims, D’Amelio said, and none of the injuries were considered life-threatening. He described them as minor to moderate.
He said the injuries included extremity fractures such as fractured legs, as well as shrapnel embedded in victims’ skin.
"The most severe injuries were lower extremity fractures, the tibia and fibula, basically the bones below the knee," he said. "The others were soft tissue injuries, blast injuries of the arms and legs, concussions from the force of the blast itself and then some minor shrapnel injuries and some lacerations also."
Initially hearing that there was a potential mass causality incident, hospital officials mobilized multiple trauma teams in Trenton and the acute surgery team at the Hopewell campus, D'Amelio said.
"When we realized that we had this volume of patients, truthfully for us, this is just Tuesday afternoon in Trenton," he said.
A search dog was visible at the scene this afternoon checking through the debris. Two sources with knowledge of the investigation said that at least one female resident of the condo complex remains unaccounted for.
The two workers for Henkels & McCoy were working on an electrical issue in the condo complex when the line was struck, and called PSE&G to assist with the leak, Lunetta said.
“Obviously it was a gas line," Lunetta said. "At that point, they retreated.”
The explosion occurred at 12:51 p.m. and destroyed the condo unit at 28 Crockett Lane, Lunetta said.
“To my knowledge there are no civilians injured right now," Lunetta said during a press briefing at 3:15 p.m. “We’re doing a house-to-house search. The fire was actually still burning. We’re not able to check everything right now.”
A PSE&G spokeswoman said the injuries to the companies workers were not believed to be life threatening. Henkels & McCoy is an engineering and construction firm that specializes in utility work. There was no answer at the company’s headquarters in Blue Bell, Pa.
Lunetta said there was damage to other condos, but it was still being assessed.

Jamison Fort said he is still trying to find out the status of his home at 24 Crockett Lane. A police officer on the scene “couldn’t tell me for sure. The first two are definitely are gone, but they don’t know the extent of the damage.”

Fort was at work at Foundation Academy in Trenton when a fellow teacher told him about the explosion, so he headed home.

A 10-year-old Bichon Frise dog named Buddy was rescued from a condo on Pioneer Court in the complex. The dog’s owner, Kelly Conrad, said she came home from work in North Brunswick after learning about the explosion and gave her keys to a police officer in the hope he could find her pet. Conrad said the officer told her the garage door was broken, but saw no other damage.

The Blood Council of New Jersey, which is based in Ewing, issued an emergency request for blood donations this afternoon due "to multiple injuries and an immediate need for blood" from local hospitals.

"We are directly supporting the hospitals and affected by the explosion," Anthony R. DeLuccio, spokesman for the Blood Council said. Visit www.GiveBloodNJ.org http://www.givebloodnj.org/for more information.

The W2ZQ Shack is across the street from the water tower that is to the right of the blast zone smoke column.
West Trenton Mercer County Airport on the upper right. Glad Frontier Airlines wasn't overhead on departure or approach. Two weeks ago a New Ham came to the shack who lives there. KC3AHY, Lisa lives one mile away.
Hope all is well the. Prayers please, 55 units badly damaged and a big crater where the 2 units used to be.
73,
Lloyd N2KPC

Lloyd,

Where do you get this information? I visited the ARISS, ARRL and AMSAT websites but have been unsuccessful in finding a link any ware. Is there a link somewhere were we can see a list of future, and possibly scheduled, ARISS school contacts?

When I was still traveling for work, I traveled largely in remote Northern Ontario with few repeaters. I always monitored 145.800 and 145.850 and actually talked twice from the mobile with the astronauts in the ISS. One very notable one was the contact with Richard Garriott on the morning of the day that he was returning back to Earth. I have listened to several school contacts that way too.

73, Tony VE3DWI.

Subject: [ten_tec_radio_net] Corrected Time ARISS contact with Rock Bridge Elementary School, Columbia, Missouri

Listen on 145.800 VHF FM Time 14:00 UTC = 9:00 AM Eastern Time

73, Lloyd N2KPC

Upcoming ARISS contact with Rock Bridge Elementary School, Columbia, Missouri

An International Space Station school contact has been planned with participants at Rock Bridge Elementary School, Columbia, MO on 05 March. The event is scheduled to begin at approximately 14:00 UTC.

The duration of the contact is approximately 9 minutes and 30 seconds. The contact will be direct between NA1SS and KM0R. The contact should be audible over the middle U.S. and adjacent areas. Interested parties are invited to listen in on the 145.80 MHz downlink. The contact is expected to be conducted in English.

Rock Bridge Elementary School is a K-5 public school operating within the Columbia Public School District. It is located in Columbia, Missouri. The school offers a core curriculum, with emphasis on science, technology, and math. Rock Bridge has a strong belief that in order to prepare students for success in the 21st century, today's learners must be able to think critically and creatively, work collaboratively, and master an ever growing list of skills. The student body is made up of 672 students from all over the Boone County, Missouri area. The school has 24 classroom teachers, 6 special area teachers, 5 teaching assistants in addition to 2 pre-school teachers. The school's mission is to cultivate learners and leaders who are inspired, able, and prepared to make a positive difference in

the world.

Participants will ask as many of the following questions as time allows:
1. How big does the moon look from space?
2. Are the foods you eat healthy?
3. What does zero G feel like?
4. What does it feel like to look back at Earth?
5. What do the stars look like from space?
6. How heavy is a space suit?
7. What experiments are you working on?
8. Do you ever worry about floating off into space?
9. What happens when you hit the atmosphere?
10. How many years of training does it take to be an astronaut?

11. What activities do you do in outer space?
12. What's the scariest thing that's ever happened at the Station?
13. Where do you sleep?
14. Can you see any planets from the space station?
15. Is time slower in space?
16. Why isn't Pluto a planet?
17. What does the Earth look like from space?
18. What's your favorite thing about being in space?
19. I read you get taller while in space, what other changes do you notice about your body?
20. How do you train for being weightless?
21. On a scale of 1-10, how would you rate space food?
22. What is your favorite experiment or project you are currently working on?
23. What can people learn from outer space?
24. Do you get to talk to your family while you're in space?

W2ZQ Shack was not damaged but 20 homes have to be torn down right away because of the blast.
35 have to be check by inspectors.
AD2DX Joe drove by the scene 15 minutes afterwards.
Thanks to Joe for the info.
73,
Lloyd N2KPC

Upcoming ARISS Contact Schedule as of 2014-03-05 19:30 UTC

Quick list of scheduled contacts and events:

Rock Bridge Elementary School, Columbia, MO, direct via KMØR
Contact was successful: Wed 2014-03-05 14:00:13 UTC 33 deg (***)

H. J. Cambie Secondary, Richmond, British Columbia, Canada, direct via VE7RAR
Contact is a go for: Thu 2014-03-13 17:04:41 UTC 54 deg

Warren Consolidated Schools, Warren, MI, direct via W8HP
Contact is a go for: Fri 2014-03-14 11:30:59 UTC 50 deg (***) New time

Central Square Middle School Amateur Radio Club, Central Square, NY, direct via KC2ILA
Contact was unsuccessful: Mon 2014-03-03 14:05:15 UTC 31 deg
Contact was unsuccessful for a second attempt at Mon 2014-03-03 15:40:35 UTC 41 deg
ARISS is attempting to determine what happened.

Space experiments "about Gagarin FROM SPACE"
Secondary school № 2 Obojan Kursk region, direct via RD3WAY
Contact is a go for 2014-03-04 10:20 UTC
ARISS has not received word on whether this contact was successful or not.

Space Experiments "on Gagarin of the Cosmos", Gymnasium № 1, Yuzhno-Sakhalinsk, Russia, direct via RØFM
Contact is a go for Sat 2014-02-22 09:15 UTC

ARISS has not received word on whether this contact was successful or not.

Space Experiments "on Gagarin of the Cosmos", Polytechnic College of number 42, Russia, direct via UB3AFD
Contact is a go for Sat 2014-02-22 13:40 UTC
ARISS has not received word on whether this contact was successful or not.

Space experiments "about Gagarin FROM SPACE"
Members of the Radio USATU students who are active members of the regional organization of the Union of Russian stations in the Republic of Bashkortostan, direct via RZ9WWB
Contact is a go for 2014-03-01 09:40 UTC
ARISS has not received word on whether this contact was successful or not.

Space experiments "about Gagarin FROM SPACE"
Children and Youth Centre "Galaxy" of Kaluga, direct via RK3X
Contact is a go for 2014-03-01 11:12 UTC
ARISS has not received word on whether this contact was successful or not.

Space experiments "about Gagarin FROM SPACE"
Centre Tourism and Youth Policy Ruzaevo Municipal District, Republic of Mordovia, direct via UB3UAD
Contact is a go for 2014-03-02 10:24 UTC
ARISS has not received word on whether this contact was successful or not.

Space experiments "about Gagarin FROM SPACE"
Center of Space Communications, St. Petersburg, who are winners of the contest "Ask your question astronaut.", direct via RA1AJN
Contact is a go for 2014-03-03 09:33 UTC
ARISS has not received word on whether this contact was successful or not.

Space experiments "about Gagarin FROM SPACE"
Secondary school № 50 YA Gagarin Kursk, direct via RW3W
Contact is a go for 2014-03-03 11:09 UTC
ARISS has not received word on whether this contact was successful or not.

I have to apologize for the late postings of the upcoming Russian contacts and lack of updates to the previously posted. Often times I receive updates just hours ahead of the scheduled time and many times after the fact. Also I tend to get the information untranslated, so please excuse the rough translations.

**********
ARISS is requesting listener reports for the above contacts. Due to issues with the Kenwood radio that are not fully understood at present, the Ericsson radio is going to be used for these contacts. ARISS thanks everyone in advance for their assistance. Feel free to send your reports to aj9n at amsat.org http://amsat.org/mailman/listinfo/sarex or aj9n at aol.com. http://amsat.org/mailman/listinfo/sarex

**********
***

Several of you have sent me emails asking about the RAC ARISS website and not being able to get in. That has now been changed to
http://www.ariss.org/ http://www.ariss.org/

Note that there are links to other ARISS websites from this site.
http://www.ariss.org/other-ariss-websites.html
http://www.ariss.org/other-ariss-websites.html

**********
Looking for something new to do? How about receiving DATV from the ISS?
If interested, then please go to the ARISS-EU website for complete details. Look for the buttons indicating Ham Video.

http://www.ariss-eu.org/ http://www.ariss-eu.org/
**********
ARISS congratulations the following mentors who have now mentored over 100 schools:

Gaston ON4WF with 117
Francesco IKØWGF with 101
Satoshi 7M3TJZ with 101

**********
The webpages listed below were all reviewed for accuracy. Out of date webpages were removed and new ones have been added. If there are additional ARISS websites I need to know about, please let me know.

Note, all times are approximate. It is recommended that you do your own orbital prediction or start listening about 10 minutes before the listed time.
All dates and times listed follow International Standard ISO 8061 date and time format YYYY-MM-DD HH:MM:SS
The complete schedule page has been updated as of 2014-03-05 19:30 UTC. (***)

Here you will find a listing of all scheduled school contacts, and questions, other ISS related websites, IRLP and Echolink websites, and instructions for any contact that may be streamed live.
http://www.amsat.org/amsat/ariss/news/arissnews.rtf
http://www.amsat.org/amsat/ariss/news/arissnews.rtf

Total number of ARISS ISS to earth school events is 891. (***)
Each school counts as 1 event.
Total number of ARISS ISS to earth school contacts is 870. (***)
Each contact may have multiple schools sharing the same time slot.
Total number of ARISS supported terrestrial contacts is 46.

A complete year by year breakdown of the contacts may be found in the file.
http://www.amsat.org/amsat/ariss/news/arissnews.rtf

http://www.amsat.org/amsat/ariss/news/arissnews.rtf

Please feel free to contact me if more detailed statistics are needed.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++++
+++
US Hams, don't forget that there is a new process for US school proposals.
For US schools to have an ARISS contact, they must fill out a proposal,
submit it to NASA, and see if they are approved or not. Once a school is
approved and put on the list, an ARISS mentor will be assigned to assist the
school.

NASA will have two open windows a year for schools to submit a proposal.
The window for contacts during the second half of 2014 has already closed.
Look for the window for first half 2015 contacts later this year. You
must go through NASA to get the proposal material. Contact Teaching From
Space, a NASA Education office, at JSC-TFS-ARISS at mail.nasa.gov
http://amsat.org/mailman/listinfo/sarex or by calling
them at (281) 244-2320.

The following US states and entities have never had an ARISS contact:
Arkansas, Delaware, North Dakota, Rhode Island, South Dakota, Vermont, West
Virginia, Wyoming, American Samoa, Guam, Northern Marianas Islands, and the
Virgin Islands. (***)

Downlink 145.800 MHz Packet Columbus 437.550 MHz ** Svesda 145.825 MHz * In Region 2
(Americas) and in Region 3 (Asia, Australia, Pacific) the Voice Uplink frequency is 144.490
MHz ** The amateur radio station located in the Columbus module is currently operational
with the UHF Ericsson transceiver and packet system using the frequency of 437.550 MHz.
To utilize the the packet system, operators need to set the UNPROTO path to ARISS (the id
is RS0ISS) for digi relay or they may connect to the BBS using the callsign RS0ISS-1.
The packet beacon is set for 2 minute intervals so it may not appear to be active over many
parts of the world but keep listening and mind the Doppler shift (+ or – 10 KHz).

This may come as old news to sum,..

I am so shocked of the news of her passing. She had a great passion and love for CW. Her contributions to the hobby were limitless.

Condolences to the family.

Here is a link to the Fist club page with more info.

Yes, but is S U R E would be nice if we could find a new “Subject” when we change topics. I think we’ve mis-used this thread for at least 9 different topics.

Maybe we should create a thread subject called “Misc. BS” and replace this one with it! ;-)

Is it not wonderful the things we can learn at a Ham Group site. As the saying goes "a day without learning something is a day wasted". Don't know who the author is / was but he was right in my book.

Les, thank you for the kind words. You and the other members of the TEN-TEC nets make this all possible.

You and the hundredths of other people are the players, while the Net Control Operators are the cheerleaders!

Thank you for your support.

C U on the TEN-TEC Nets Sunday 3-9-2014
Listen to the TEN-TEC 40 and 20 meter SSB on QRZ.
Just type in John's callsign KC2QMA and click on the blue arrow with the blue circle to live stream the TEN-TEC SSB Nets on your computer.
For the new members of the TEN-TEC Family check out the nice pictures on this site under photos.
Just click on the album photo to see all of the photos in it. Then click again to enlarge that picture to full screen size and to see the text captions by moving your mouse to the bottom left of the picture.
Feel free to put your own pictures to share with us all too.
Maybe a picture of your portable RV, mobile, Field Day setup, Antenna Farm no matter how big or small.
Maybe your shortwave station that you listen to the TEN-TEC Nets as a SWL'er.
It would be nice to see a picture of you too with your radio shack.
My Wife Gaye, KB2YOA and myself Lloyd, N2KPC Welcome you along with everybody else on the TEN-TEC Nets.
Please if you can come to the 15th Annual TEN-TEC factory hamfest on the last Friday and Saturday of September at Ten-Tec, Inc., 1185 Dolly Parton Parkway, Sevierville, TN 37862.
TEN-TEC is located 2.5 miles east of downtown Sevierville on highway 411 north, across the street from Sevier County High School. Watch for stop light #17.9 on Dolly Parton Parkway.
So make your vacation a nice one and get to meet some of the TEN-TEC Family that you talk to and hear on the air.
Also I will be at Dayton Hamfest helping out at the TEN-TEC booths so stop by and say hello if your coming to Dayton.
73, Lloyd N2KPC

10 meter SSB net, Sunday 1PM Eastern Time on 28.440. Lloyd N2KPC, Net Control.
Primary Backup Net Control will be: Andy W3LI in PA.
Secondary Backup Net Control will be: Mike W3TS in PA.

40 meter SSB net, Sunday 1:30PM Eastern Time on 7.263. John K3UR, Net Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Secondary Backup Net Control will be: Ted N8TJE in OH.

20 metet SSB net, Sunday 3PM Eastern Time on 14.325. John K3UR, Net Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Seconday Backup Net Control will be: Tony VE3DWI in Canada.

40 meter CW net, Monday 7:30PM Eastern Time on 7.063. Ron WBIHGA, Net Control.
Primary Backup Net Control will be: Roger KI8DU in WV.
Seconday Backup Net Control will be Andy W3LI in PA.

40 meter SSB net, Wednesday 2PM Eastern Time on 7.263. John K3UR, Net Control.
Primary Backup Net Control will be: Ted N8TJE in OH.
Seconday Backup Net Control will be: Tony VE3DWI

73, Lloyd N2KPC.

Not in Arizona, thank goodness. The last thing we need in southern Arizona is another hour of sun on summer evenings. We keep that hour in the morning where it belongs.

Only government would cut a foot off the end of a rope, tie it to the other end and then claim we now had a longer rope.

Topic: 980  Message: 1701

Hello Ten Tekkies,

It’s that time again. The CW net begins at 00:30 UTC 7063 +/-.

Once again, I ask Roger KI8DU to fill in for me.

I have yet to solve my antenna issues for 40 meters.

Aging (me) is part of the problem. I realize I cannot do what I used to do.
I had a minor accident (while on the ground). Sprained my right hand fingers.
Darn that hurts! I am arranging for help from local club members.
I also hope the weather will become more “normal” so we can work
on the antenna.

I will be listening though.

Bill, I heard you yesterday on 28.440 MHz. but signals were way down from what they usually are between AZ and FL and it was obvious you were not hearing me. I was also looking for a relay but had no joy.

And FWIW, I add my voice to the growing list of people who think that daylight "saving" time has become rather irrelevant in today's world. They should just pick a time (standard or daylight saving) and stay with it the whole year instead of putting people through this time change twice a year. I think AZ has it right in that regard!

The only downside to NOT changing your clocks is, if you have standard time the whole year then it starts to get light at about 3:45 AM around the summer solstice, and if you have daylight time the whole year then the kids are going to school in the dark around the winter solstice.

I too heard Bill and a few others on 28.440 but the contesters were pounding in such that I didn't even try a call.

The Tennessee legislature is about to vote on whether to keep or disband using Daylight Savings Time. Personally and as my friend does, I consider it Daylight Wasting Time. Personally I would prefer those business and organizations that have an issue with the daylight hours be the ones to adjust their schedules as opposed to imposing the change on all of the citizens. Thus as was said "one can please part of he people part of the time but not all of the people all of the time".

As the old Indian Chief said; "only the white man thinks he can cut 12" off of one end of his blanket and sew it on the other end and have a longer blanket".

Subject: [ten_tec_radio_net] RE: Relay

Bill, I heard you yesterday on 28.440 MHz. but signals were way down from what they usually are between AZ and FL and it was obvious you were not hearing me. I was also looking for a relay but had no joy.

And FWIW, I add my voice to the growing list of people who think that daylight "saving" time has become rather irrelevant in today's world. They should just pick a time (standard or daylight saving) and stay with it the whole year instead of putting people through this time change twice a year. I think AZ has it right in that regard!

The only downside to NOT changing your clocks is, if you have standard time the whole year then it starts to get light at about 3:45 AM around the summer solstice, and if you have daylight time the whole year then the kids are going to school in the dark around the winter solstice.

I too heard Bill say zero delta just once with a 5x5 signal and that is one reason he is in my log.
The second reason is that his full call honored my log sheet relayed to me by another ham.
The band was dropping in and out fast and furious in a second.
73,
Lloyd N2KPC in a dinner somewhere in NJ.

Sorry I missed the net.

I read yesterday's e-mail that the net was going to be at 00:30 hrs and figured it was confirming the time due to DST change over the weekend.

I just got down here to the shack for the net at about 8:40 (unfortunately better late than never!) and it seemed awfully quiet.

Then I found this thread that it was still at 7:30 EDT (23:30 GMT due to the change in DST).  I guess I should check e-mail more often!

Hopefully the band will be good next week for us in Michigan and I'll be listening next week.

Till then,

73,
Dave / K8QH.

# 1737. W2ZQ Delaware Valley Radio Association votes unanimously for a OMNI 7

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-13 05:19:01 UTC
From: <n2kpc@...>
Topic: 1737  Message: 1737

Gaye, my Wife and I just came from the W2ZQ DVRA Club meeting and the club voted unanimously http://www.google.com/url?sa=t&rct=j&q=&esrc=s&source=web&cd=3&cad=rja&uact=8&ved=0CDgQFjAC&url=http%3A%2F%2Fwww.thefreedictionary.com%2Funanimously&ei=ZhwhU_eNNOfx0gHax4HwBA&usg=AFQjCNHatD_MGpdOV7z4fACeqGen1glBIA&sig2=fBLJKi0FT7KuRc8n6mOGJA&bvm=bv.62922401,d.dmQ to purchase a Omni 7.
AD2DX Joe and I are razing the funds. We got about half so far. Not bad for a small old growing Club.
W2ZQ Club has been very supportive towards the TEN-TEC Nets and it is where I do the TEN-TEC Nets from in West Trenton, NJ 08628-0024 USA.
Delaware Valley Radio Association take a bow and Thank You for all you do for the TEN-TEC Nets and us.
They go out of their way to help the TEN-TEC Family to promote Amatuer Radio all the time.
They are a non-profit club too, hint. So you will hear yet another OMNI 7 on the air throwing a great signal thru it's 14 element Force 12 Yagi for the 10 and 20 meter TEN-TEC Nets and a 2 element 40 meter Force 12 Yagi
for the 40 TEN-TEC Nets so you can check in.
W2ZQ http://www.qrz.com/atlas?dxcc=291 USA http://www.qrz.com/atlas?dxcc=291
DELAWARE VALLEY RADIO ASSOCIATION INC, W2ZQ
PO BOX 7024
West Trenton, NJ 08628
USA
So look around you and find a Club to make strong again or start your own with some radio friends.
I did it and you can too. Maybe at a YMCA, Church, Scouts in your area, Retirement Home and most of all a Grade School or College or just a couple of friends.
73,
Lloyd N2KPC

Good Morning to the net;
I want to take time to thank everyone who takes part in the net activities. A special thanks for John and Lloyd. John for having started such a great net and Lloyd for taking time to rotate that big antenna system and listen for us. It was a surprise to receive such a large box for a 50 check in certificate. But then finding the gift included was a bigger treat. I am not a coffee drinker, but the wife saw that and it sure made her day! If she has a good day, so do I. LOL I also want to take the time to thank the Relay stations out there that also help. I know there would be times I would not have been able to check in with out them being available. Again it's a special net with a lot of great people making it work.

As Lloyd mentioned, we are almost halfway towards our goal of raising the money to purchase a TenTec Omni VII radio for the W2ZQ club station. At the club station, Lloyd is instrumental in training club hams and non-club hams/visitors on how to use the TenTec Eagle. He also toggles between the Eagle and other brand radios to demo how big the Eagle's ears are compared to the competition. To that end, the Omni VII will be available for club member use, and to allow users to remote into the W2ZQ club shack to run the Omni VII from their homes. I certainly will be trying that as well.

At the club shack, we also run soldering classes to assist new hams on how to solder printed circuit boards, and I provide them with some basic electronics knowledge. We have also trained hams on how to solder PL-259's, and how to seal them with adhesive-lined shrink sleeve tubing.

It will be a superb edition to the W2ZQ club shack when we raise the rest of the money needed to purchase the radio. The W2ZQ club is a non-profit 501c3 organization, that appreciates any donations. If anyone is able to help with this cause, please feel free to contact either Lloyd or myself.
Thanks and 73.

?

Hello Lloyd,

I've never been able to hear you on any of the 10 Meter Nets, the same is true with the other locals here in WV.

Do you have other relay stations further West/North/South calling for Checkins ? You probably do, but WV would love to get Checked in on your Net.

Thanks;

Roger / KI8DU in WV

Hi Roger,
I always ask for relays for the Hams in other areas during the 10 meter net like AI0D, Bill in AZ or a TX, CO station etc.
Stay on for a while starting at 1:00PM because I am use a 14 element Force 12 Yagi on 10 and 20 meters and will call for you time to time .
Can't pick the relays ahead because of propagation to and from NJ on 10 meters that changes sometime very quickly during the and everywhere else too.
We will do our best.
73 and thank you for trying.
Lloyd N2KPC NCS

# 1752. Monday night CW net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-16 14:27:25 UTC
From: ron
Topic: 1752  Message: 1752

Ten Tec CW net every Monday night on 7063 +/- 0030 Z (7:30 Eastern Time).

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AK (sent together) means STANDBY.

When do I ck in?

After u hear QNI, and only then; send the last two letters of ur call. NCS will acknowledge by repeating ur last two letters of your call followed by: “AK” This means STANDBY. I REPEAT, STANDBY. This gives others a chance to sign in, and reduces interference.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

keep warm!

73

Ron, wb1hga

Hello Ben,
Just wait until you hit 50 Check-ins. I found Document Frames at the local Dollar General at $2.00 each. We purchased enough for the entire Shrine to KJ4WS. The Certificates are my Pride and Joy. Also. Included on my wall are several FEMA training certificates along with Energetic Materials Research ( How to disarm nasty little packages ) Firefighter I and II and Hazardous Materials Technician at Operations Level. Plus others dealing with the Army and various other Nets. But, my Greatest Pride is in those 3 from Ten Tec. John, and the whole crew at Ten Tec make me Proud to be a Ham. And I believe that this fine group, is composed of only the Best of the Best Hams in the World. As for me, can't wait to hit 100 and beyond. The 50 or Gold Certificate is nice and we guess that the 100 will be Platinum. And that Goodson Brothers Coffee sure tastes good!
73 to you Ben, and the Group from Wade KJ4WS

From: ron
Topic: 1193  Message: 1770

Hello Ten Tekkies,

We had 8 ck-ins including a EA trying to ck in and a N8 getting buried in foreign station(s) QRM.
I could not copy (N8) his signal at all. I moved down a bit in frequency.
After moving, we were doing well until we got QRM'd on top of us.
There would have been more ck-ins if not for this (second) intentional qrm.
I thought this is a gentleman's hobby. I am dissappointed.
This doesn't help the rest of us who want to participate in our net.

Regardless, we will return nx week, same time and frequency.
Have a good week and above all, keep the faith.

Ron, do not get discouraged with the results. The intentional interference also happens on the 3 TEN-TEC nets that I run each week. I have had to move frequencies on many occasions.

I believe that "what goes around, comes around" and as long as we do our best, the people who delight in indulging in their indecorous behavior will eventually be caught up with.

Keep up the good work.

I wish to Thank Andy W3LI for his hard work and time to the TEN=TEC Nets and me.
Andy is in PA and hangs in there thru the whole net when he can and relays anytime he can.
He is the best Guard Dog you could ever have and eats LIDS for a snack, HiHi.
Maybe we can clone him for Ron's CW Net and send the other one to MA on Mondays, HiHi.
Anyway Thank You Andy.
I get a lot of email about the TEN-TEC Nets from all over the world about how they enjoy listening to the
TEN-TEC Family on the air and that makes me proud of all you who take the time to checkin.
Don't worry about the LIDS they fade away soon enough because good will come thru from above.
K3UR John has asked ne to promote the TEN-TEC Nets and I am honored to do so because You all do a great job and give a hoot about our amateur radio hobbie.
You see I am the PR guy and glad to do so because of all of you who kindly make it so nice to check you in to the nets. I along with the other net controls enjoy have you all there too. We would not do it if we didn't.
I will not let anybody change that, LIDS included.
So W3LI take a bow.
To the new HAMS on the TEN-TEC Nets know this, The TEN-TEC GROUP FAMILY IS WATCHING OUT FOR YOU because this is one Net that cares. AMEN.
73,
Lloyd N2KPC .-.-.-

John / K3UR

Its my understanding that I was Checked-in Yesterday. There must have been some QRN/QRM going on or something as I was at my sisters house all afternoon.

So if I did get Credit for yesterdays Net, please remove that Check-in Credit from Wednesdays Roster.

Thanks;

Roger / KI8DU in WV

Roger, your callsign was relayed to me and that is why you were listed as a checkin. I want to thank you for your honesty.

I have the option of giving out bonus points for certain activities that take place during our nets.

In the light of your willingness to take charge of the TEN-TEC 40 meter CW net recently and the fact that you were honest about the net yesterday (Wednesday), I am giving you the ckeckin credit.

An older wise man told me many years ago that, "honesty is the best policy".
Thanks again for supporting the TEN-TEC Nets.

# 1786. TEN-TEC NETS SUNDAY 3-23-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-22 02:28:17 UTC
From: <n2kpc@...>
Topic: 1786  Message: 1786

C U THERE,
10 meter SSB net, Sunday 1PM Eastern Time on 28.440. Lloyd N2KPC, Net Control.
Primary Backup Net Control will be: Andy W3LI in PA.
Secondary Backup Net Control will be: Mike W3TS in PA.

40 meter SSB net, Sunday 1:30PM Eastern Time on 7.263. John K3UR, Net Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Secondary Backup Net Control will be: Ted N8TJE in OH.

20 metet SSB net, Sunday 3PM Eastern Time on 14.325. John K3UR, Net Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Seconday Backup Net Control will be: Tony VE3DWI in Canada.

40 meter CW net, Monday 7:30PM Eastern Time on 7.063. Ron WBIHGA, Net Control.
Primary Backup Net Control will be: Roger KI8DU in WV.

40 meter SSB net, Wednesday 2PM Eastern Time on 7.263. John K3UR, Net Control.
Primary Backup Net Control will be: Ted N8TJE in OH.
Seconday Backup Net Control will be: Tony VE3DWI

73, Lloyd N2KPC

# 1788. SPRING HAS SPRUNG!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-22 15:06:16 UTC
From: John Occhipinti
Topic: 1788  Message: 1788

Hello to all of the dear members of the TEN-TEC nets. I just wrote a short poem to welcome in Springtime.

Spring has sprung so do not fear,
five TEN-TEC nets are here,
the TEN-TEC members truly care,
they come from far and near,
they enjoy spreading lots of cheer,
when they key up their radio gear,
many will show great style and flair,
greetings come from everywhere,
young and old will soon appear,
these people are so dear,
respect is what people want to hear,
Spring is a beautiful time of year.

# 1789. TEN-TEC OMNI DAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-22 18:20:16 UTC
From: John Occhipinti
Topic: 1789  Message: 1789

I would like to hear all of the various Omni radios to check into the nets this weekend. This is meant for the many people that have several different TEN-TEC radios.

All other TEN-TEC models and other brand radios are welcome to check into the nets, as has been the policy from the beginning.

Thank you for your support.

You by chance don't have the VOX on do you? That could be keying things and you're not pressing the PTT. Also if you have a key or paddle plugged in, closing the contact will put the radio/amp in transmit.

No Bob dont have the VOX on. Its puzzling,I'll try to put it in order.
When the Omni 7 is tuned up I can transmit and everything is ok
but as soon as I have the amp on operate and I key the mike and modulate
the amp will start to pulse and it shows that it is putting out RF,when I
quit talking
into the mike the amp will remain pulsing and show output,I tried to lower
the power to around 18 watts the amp will quit pulsing.It will not pulse
with the amp on standby or off,and I found that this only occurs on 20
meters,regardless
of antennas I use...Thinking that maybe a choke went bad and increased the
SWR
But not the case.Very strange,I never had this kind of a problem or heard
of such.

Does it occur with the amp on a dummy load? I bet it doesn't. I suspect you have RF getting into the audio.

Check all connectors, jumpers and such. Bet you'll find one loose or not tight. My comment earlier, finger tight with the quality of PL-259 connectors in todays market is not adequate. I always snug mine with a pair of 4" Channel Lock pliers.

Yes make sure the PL-259 is properly seated and not like this >< if so, all it takes is a little bump to twist one and you end up with a loose connector. Been there done it.

Topic: 1796  Message: 1804

From my earlier post to another group.

<snip>
Advice to all:
Never trust a PL-259 which is finger tight. I always have a pair of Channel Lock pliers at the desk and always snug the connectors. I find that the new breed of connectors actually looks better than they are, thus the need to make sure they are VERY tight to have a good solid connection.

If you have:
RF in the audio.....snug the connectors
SWR that varies.....snug the connectors
Noise on receive.....snug the connectors
Power output that varies.....snug the connectors
and there's more.....snug the connectors

<snip>

the amp will start to pulse and it shows that it is putting out RF,when I quit talking

into the mike the amp will remain pulsing and show output,I tried to lower

the power to around 18 watts the amp will quit pulsing.It will not pulse with the amp on standby or off,and I found that this only occurs on 20 meters,regardless

of antennas I use...Thinking that maybe a choke went bad and increased the SWR

But not the case.Very strange,I never had this kind of a problem or heard of such.

John sorry,two items

Number one you dropped out where I cannot

copy you at all.and number two my amp is acting

strange...The amp is pulsing without me pushing the PTT,its showing the output,grid,and plate,pulsing at will. If your reading this Bob K4TAX Help''Never had this happen,I have a AL-80-B 75 watts of drive.

This just happened on 20 meters,do you think its the radio or amp...

Hi Bob and Tony

Did my best and no joy however I'll try the outside pl-259 coming
into the house.....Found one other thing is that the power
supply is also doing the same thing,is that normal.Amp meter on the Astron
35-M

Well Bob
I'm going to take a break tonight and get a fresh start tomorrow,I'll do every connection again,so for now Thank you and Tony for your help maybe you'll come up with someting else,but I think your right about the connection,it might take a little more time. I will keep you informed.

Topic: 1796  Message: 1808

If there is RF getting into the audio, then the Omni VII puts out a bit more power as a result of this. With more power output the amp meter increases as it should. Then the drive to the amp increases which then produces more RF which then puts more RF into the audio. With all of this you must have a nasty sounding signal on SSB.

And believe me, I hear lot of really bad SSB audio on the bands these days. Brand or model of radio has little to do with this issue. As I participate in several nets, I hear a lot of radios and I find that most of the issues are not from Tentec radios either. Bad mikes, poor choice of mike, poor quality cables and connectors, external equipment being connected incorrectly or poorly connected are largely contributing factors. Frankly, I find that a good mike connected direct to the radio is absolutely the best configuration. Add anything else in the path and the signal quality usually degrades. Or it just sounds different but usually not better.

Conclusion, if the radio, the amp and power supply are performing correctly on the dummy load, then it is most likely something connected to the amp. I.E. defective antenna, external tuner, SWR/PWR meter, lightning protection system. If it is a cable issue associated with the antenna, which of course radiates RF, that gets back into the cables and thus into the audio. If you have a high SWR then I'd say that needs to be seriously addressed. Any SWR of less than 3:1 is considered OK and should not cause issues. At the same time, it is a good practice to have a common mode choke on the output of the radio and another on the output of the amp. I do and have no RFI issues, any band, any power.

Make sure you have a solid ground between the Omni VII ground terminal on the back and the ground terminal on the Astron supply. Now if your Astron is like mine, and I have 3 of them, the negative is not connected to ground at the supply. You could have RF getting into the supply as well.

I know there have been discussions as to the DC negative being connected to ground with some thinking this being correct and some thinking it is not being correct. I've just been through a long diatribe of info and tests on the supplies to satisfy another persons issues. I firmly believe that the DC negative must be connected to chassis ground and the AC ground, green wire, and this should be connected at the same point in the supply. And I've found that although the green wire appears connected, it has been found to be insulated via the chassis paint. Do not assume, take it apart, clean it, remove some of the paint around the connection point and put it back together correctly.

On the other hand, I no longer use linear supplies for my stations. I use SS-30M supplies and I have added a ground terminal to the supply and connected the DC negative to the ground terminal inside the supply. My linear supplies are used for general bench testing and charging batteries and providing DC for a pump that I have in the fish pond.

Let me know how I can help.

No Bob dont have the VOX on. Its puzzling,I'll try to put it in order.

When the Omni 7 is tuned up I can transmit and everything is ok

but as soon as I have the amp on operate and I key the mike and modulate

the amp will start to pulse and it shows that it is putting out RF,when I quit talking

into the mike the amp will remain pulsing and show output,I tried to lower

the power to around 18 watts the amp will quit pulsing.It will not pulse with the amp on standby or off,and I found that this only occurs on 20 meters,regardless

# 1810. TEN-TEC SSB NET HAD 31 CHECKINS 3-23-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-24 04:59:28 UTC
From: <n2kpc@...>
Topic: 1810  Message: 1810

A wonderful net that was made possible by everybody helping to relay because of propagation dead spots.
Team work was in play and it worked great.
NJ-12, TX-5, PA-3, CN-3, AZ-2, LA-1, IL-1, TN-1, WV-1, KY-1, MA-1.
I believe that a net does not work better than what took place today because of all of you that checked in.
All three TEN-TEC Nets made me proud of the TEN-TEC Family because I had "New Hams" in the W2ZQ Club Radio Shack during all three nets and they will be back and said they enjoyed the TEN-TEC SSB Nets today, all day.
Many Hams sent me emails and called me during and after the nets informing me that they found the TEN-TEC Nets interesting and liked the way the nets went. These are new hams, what more could you want.
So take a bow TEN-TEC Family, you all made it possible yet once again.
You are bring into the Amateur Radio Family new Hams to TEN-TEC Family that will be there for the long run.
They will be our replacements down the road sooner or later. Will let God take care of that one.
KC2QMA, John Thank You once again for the live steam, it really helped peak the interest once again..
Thank You K3UR, John for your hard work and time once again too.
Thank You Jim Wharton, NO4A President of TEN-TEC, for all you do.
Thank You Stan Brock, WD0GBS, Sale of TEN-TEC for all you do too.
They really work hard to help us all.
So from KB2YOA, Gaye and myself N2KPC, Lloyd Thank You once again, 73 and may God Bless You and Yours.

# 1811. CMC

From: Bob McGraw - K4TAX
Topic: 1811  Message: 1812

I have had very good succes with products purchased from The Wireman being model 8232. This is the assembled ready-to-use product.

For another project I purchased 2 kits being model 8332 and made one choke using all the beads from the two kits. These have to be assembled.

These CMC's are basically a 3 ft coax jumper with a PL-259 on each end. The coax has some 50 +/- beads on the outside and is covered with heat shrink insulation. The coax is very good quality and will handle legal limit.

# 1813. WELCOME NEW MEMBERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-24 16:03:52 UTC
From: John Occhipinti
Topic: 695  Message: 1813

I want to welcome the new members to the ten_tec_radio_net Group. We are an ELITE group of people who support the TEN-TEC nets.

This past week has seen several people unsubscribe from the ten_tec_radio_net Group, for reasons unknown. As Group Owner, I receive notices everytime someone subscribes and when someone unsubscribes.

We do our best to run the TEN-TEC Nets each week and have gone the extra mile to honor various requests.

Sometimes personalities clash and usually for the most insignificant reasons.

I formed the ten_tec_radio_net Group last year March 20, 2013, in order to have a place for "team players" to congregate as a family and to be true
ambassadors for Amateur Radio.

I want to thank all those who have supported my efforts here, as I took the initiative to re-start the TEN-TEC Nets in April 2012, after several years of no TEN-TEC Nets.

We have expanded from one net in 2012 to five nets, with your help, dedication and support and I truly appreciate each one of you.

John D. Occhipinti, K3UR

# 1818. Re: [ten_tec_radio_net] CMC

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-03-25 02:50:12 UTC
From: Benjamin H. McMath, III
Topic: 1811  Message: 1818

Y'all, I was watching this thread and it brought to mind a weird little occurrence I had recently.....

I was working 10M (28.440) the other night on my Omni 7 and got a call on the 2M rig.

Scenario:
The O7 is powered by an Ameritron 30A PS plugged into a buffered power distribution system (Monster Power HTS 1600).
My antenna is a G5RV Pro Junior at the end of 90' of RG-213 with nine 5" turns at the radio for a "pseudo" current balun.
The Yaesu 2M radio is powered by an old Tripp Lite 10A PS plugged into the same distro system.

I answered the call with my 4W HT and my radio IMMEDIATELY SHUT DOWN!! Reset the PS, tried again, and BOOM... O7 shut down again! Head-scratchin' began in earnest! The 50W 2M radio didn't cause the radio to shut down, I suppose because the antenna is about 60' away. ONLY the 4W HT into a rubber ducky 5 feet away from the radio caused a shutdown!

To make a long story short, the solution was to wind 'most' of the Ameritron PS's 110V power cable around a piece of 1" re-bar (about 6 inches long) as a temporary choke!

Yes, I did unplug the antenna coax from the O7 (and unplugged the mic switch so as to NOT INADVERTENTLY TRANSMIT) to eliminate that avenue. Tried moving a bunch of stuff around to no avail. Brainstorming and experimentation took about four hours!

Bottom line is....sometimes the smallest things can cause a problem! And, hunting them down can be a real treat!

Hope you get your issue resolved quickly.

73 and good luck!

Ben McMath, W5SOF on the Redneck Riviera

BTW, I recommend The Wireman stuff too!

Hello Ten Tekkies,

Last night we had 15 ck-ins. The band was much better than last week.
We almost went international. I heard F1 calling but no joy.

Nx week, I plan on setting a minute aside to listen for any DX stations
wishing to ck into our Ten Tec CW Net.

Those who logged in, give yourselves a round of applause. Your participation
makes this all possible.

From: ron
Topic: 1110  Message: 1835

It’s that time again to participate and earn credits toward Ten Tec certificates.
You receive the certificates after 10 credits (ck-ins), 25, 50 and 100.
It’s also fun for all who wish to participate. Pro or newcomer, dust off the paddles/key and check in.
No breakneck speeds here. Send at your pace up to 13 WPM. This is a slow speed net.

We meet every Monday nights at 7:30 Eastern time (0130 Z) on 7063 +/-.

Because some DX stations tried to check in last 2 weeks, I am setting aside a minute during the net
for this. I will be calling “CQ DX de Ten Tec Net”. Please, during this time do not transmit unless you are the DX station. Let’s give them a chance too.

The exchange is:
call, name, state (only), RST and radio. Nothing else is required.

After I call CQ and send QNI, please send last 2 letters of your call. You will then be called from a list.

see you there ....

Ron, wb1hga

Date: 2014-03-31 17:56:45 UTC
From: <bobmichaux@...>
Topic: 1843  Message: 1843

hello friends Tentec
European Tentec SSB control.
I do my best, but worry you do not hear me I am assailed Italian station and DL happens I am very strong on Wednesday night at 20 h 00
I use the QRG of 3650 or 3685 I have a lot of QRM 20 h 00 TU and I do not hear stations calling me.

For your information I will change the day for european Tentec SSB Net I tried on Thursday night qrg of 3633 kHz which is much quieter from 19 h 00 GMT - 21 h 00 local in Europe.

I will also build a Delta Loop optimized for 80 m, I'm testing but I have no amp.
current traffic condition: Tentec Orion II - 100 WTTS and G5RV antenna, which is not the top hi
I hope that soon you will hear me correctly

WELL, THIS IS A BUMMER, I CANNOT HEAR ANYTHING ON EITHER FREQ.
I CANNOT STAY LONGER THAN 1:45 (I HAVE A PART TIME JOB AS CROSS GUARD)
AND I AM SAD ANOTHER WEEK W/O ANY CONTACT.
THANK YOU JOHN FOR BEGINNING AT 1:30. I HAD HOPE TO HAVE A CHANCE
TO CONNECT TODAY.

Topic: 1864  Message: 1864

WB1EXV PHILIP R. DUNN SK ON 3-24-2014
Phil was a very kind net control for the Maine Potato Net who love ham radio and showed it. He honored us with 4 checkins to the TEN-TEC Nets and was there as a net control every night at 7:00PM 365 days a year on 3958.
I just talked with his Wife and she said that " He loved the net and enjoyed it very much." It is really what each of us do that counts and he spoke of the TEN-TEC Nets often letting Hams know that we were on the air. He said it was nice of some of the folks from the TEN-TEC Nets to check in to his. KC2QMA John check in from TN and K2XU John from NJ checks in often as a new Potato.
Prayers for his family.
Thank You,
Lloyd N2KPC

# 1866. Scorpions on the TEN-TEC Nets

Yahoo group: ten_tec_radio_net (2007 — 2014)

From: <n2kpc@...>
Topic: 1866  Message: 1866

I Posted a email on the Scorpion Antenna Yahoo group letting them know about us.
I hope to hear some of them check in with the TEN-TEC Family.
K2JZO John and myself are using the Scorpion antennas mobile and the pictures are now up on our site.
Here is my post to them.

Hello,
Well I tried every antenna that I could find and I am most pleased with Scorpion best of all.
I have worked them from NJ to BC, CN.
I use the TEN-TEC Eagle with my scorpion shorty to copy digi modes thru out the hf bands from wefax to shortwave and utility station too.
Anyway, If you would like to hear your Scorpions on the air live on QRZ on 40 and 20 meters Sundays I have included the TEN-TEC Net schedule below.
Just type in KC2QMA John on QRZ and you can hear the net live from TN. with a 30-45 second delay.
Click on the blue circle to hear it.
Many mobiles from all over check in and anyone with any radio is welcome.
If you go to YAHOO TEN_TEC_RADIO_NET and look at the photos feel free to post your Scorpion pics there if you would like.

Hi Paul,
In New Jersey USA the 10 Meter net is at 1:00PM Eastern Day Light time = 13:00 local time = 17:00 UTC
10 Meter TEN-TEC SSB Net 17:00 UTC
40 Meter TEN-TEC SSB Net 17:30 UTC
20 Meter TEN-TEC SSB Net 19:00 UTC

I am Net Control for the 10 meter net at 17:00 UTC
K3UR John is Net Control for the 40 meter net.
When I finish the 10 meter net I take over the 40 meter net from John because I am North USA.
K3UR John is in the South USA so I can work stations that he can not.
At that time K3UR goes to the 20 meter net and when I finish the 40 meter net I take over the 20 meter net.
I will call out by beam headings on all three net because I am using a 14 element Force 12 yagi
on 10 and 20 meters.
On 40 meters I am using a 2 element Force 12 40 meter yagi stacked above the 10-15-20 yagi.
Also depending on propagation several relay stations help on the nets too.
I do the nets from the W2ZQ Club Station in West Trenton, New Jersey USA
FN20OG.
I am at the W2QZ Club Station now and will spend the night here in my RV so that I won,t miss the TEN-TEC Nets, HiHi.
It is a 45 minute drive North from my QTH in Mount Holly, New Jersey, USA FM29OX.
1:00 PM Eastern Daylight time=13:00 (24 Local time) = 17:00 UTC Sunday on the posted TEN-TEC Nets.

Topic: 1873  Message: 1873

I want to personally welcome the 4 people who joined the elite ten_tec_radio_net Group this past week. I have been asked by many people why I have chosen the word "elite" to describe our Group and my definition is, "Amateur Radio Operators who are very skillful, talented and most influential, by continuing to display high quality in their modus operandi and being the best they can be".

Now to put the icing on the cake....

When you are elite, you can compete, and congregate with the best,
when you are elite, you're considered complete, when you are compared to the rest; when you are elite, it's hard to be beat, by showing high quality,
when you are elite, you can laugh at defeat, keep being the best you can be.

Thanks to everyone for your support.

Topic: 1874  Message: 1874

It’s that time again to participate and earn credits toward Ten Tec certificates.
You receive the certificates after 10 credits (ck-ins), 25, 50 and 100.
It’s also fun for all who wish to participate. Pro or newcomer, dust off the paddles/key and check in.
No breakneck speeds here. Send at your pace up to 13 WPM. This is a slow speed net.

We meet every Monday nights at 7:30 Eastern time (0130 Z) on 7063 +/-.

Because some DX stations tried to check in last 2 weeks, I am setting aside a minute during the net
for this. I will be calling “CQ DX de Ten Tec Net”. Please, during this time do not transmit unless you are the DX station. Let’s give them a chance too.

The exchange is:
call, name, state (only), RST and radio. Nothing else is required.

After I call CQ and send QNI, please send last 2 letters of your call. You will then be called from a list.

see you there ....

# 1876. TEN-TEC 10 METER SSB NET 4-6-2014 HAD 26 CHECKINS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-04-08 02:16:36 UTC
From: <n2kpc@...>
Topic: 1876  Message: 1876

NJ-12, TX-4, CN-3, PA-2, AZ-1, KY-1, TN-1, NY-1. MEXICO-1

XF1 / N7RSS/ MM TERRY MEXICO SEA OF CORTEX, PACIFIC OCEAN, 44 FT. SAILBOAT
Here is Terry's QRZ info.

My summer time home is Langley, WA but I have little opportunity to enjoy ham radio from this location.
I winter on my boat in Mexico and this is where I make most of my contacts; from my ship board radio. I travel typically as far north as midway up into the Sea of Cortez (as far north as Sta Rosalia on the Baja side, Guaymas on the mainland side). And as far south as Manzanillo or Zihuatanejo.
My wife and I leave the boat out of the water in Guaymas, Sonora for the hurricane season (summer), launch in the fall (November/December time frame), and head south for the Winter. We start working our way back north again in the Spring and pull the boat in May or June.
I love the great signal reports I get. While my station is modest (IC706) and I run barefoot, the Pacific Ocean makes a great ground plane. Thanks to all of of you that have patiently waded through pileups to work me.
==========
About the boat
She is a 1979 Kelly Peterson 44 which I purchased in 2000. After I bought her, I immediately pulled her from the water as she was in such bad shape I was afraid she would sink at the mooring. Over the course of 3 years I completely reworked her including a new engine and shaft, running rigging, standing rigging, all plumbing and all electrical. I replaced the windlass, the refrigeration, every inch of wire and every hose.
She is a cutter rigged sloop, meaning she has 1 mast (and consequently 1 mainsail) and 2 head sails (jib and staysail). I also carry a spinnaker and storm canvas (trysail and storm staysail). For auxilary propulsion I have 72 HP marinized Toyota engine. She carries 110 gallons of diesel (for a range of about 600 miles under power), 135 gallons of water (good for about 6 weeks if we scrimp) and dsiplaces 30,000# empty. She has a skeg hung rudder and a long fin keel.
Below deck accomodations include 2 cabins, 2 heads (1 with shower), galley with propane oven and stove, refrigeration and a saloon (living area). There is a navigation station with radar, AIS receiver, chart plotter, VHF radio and SSB radio.
My most challenging sail was bringing her down the Pacific coast from Washington state. While off the coast of Oregon we saw sustained winds of over 40 knots and seas of 20' for several days. While for accomplished offshore sailors, there is nothing particularly unique is this passage, it was new to me and proved how incredibly strong and capable this boat is.
73,
Lloyd N2KPC Net Control Station

Good Morning, Jim,

The 100 Checkin certificate arrived in Tuesday's mail. I am honored to receive it as it does represent to me an ongoing participation with Ten-Tec in promoting excellence in radio performance. I have already benefited from the information shared on the nets and greatly enjoy net activity itself, a great bunch of people! Thank you for the certificate and thank you for the fine products and service from Te-Tec.

Sincerely,
Ed, WA9GQK

https://us-mg6.mail.yahoo.com/neo/launch?.rand=fsmsnnp358o2t# For your info, 73, Lloyd N2KPC
You can get this sent by email from the ARRL by being a member.
You can also have a email by checking a box on their Website that will have your call sign followed
by ARRL.NET. Mine is n2kpc@arrl.net
A good idea so that if you need to send a email or receive a email the other ham just needs your call sign
and just asks "are you good at the ARRL email ?" and your good to go.

Today at 3:29 PM
SB PROP @ ARL $ARLP015
ARLP015 Propagation de K7RA

ZCZC AP15
QST de W1AW
Propagation Forecast Bulletin 15 ARLP015
From Tad Cook, K7RA
Seattle, WA April 11, 2014
To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de K7RA

Average daily solar flux weakened over the past seven days, and so did the outlook for the near term, at least until Thursday, April 10. Average daily solar flux declined from 149 to 142.2, while average daily sunspot numbers remained about the same, moving from 130.4 to 129.3

From the NOAA/USAF 45 day forecast, predicted solar flux is 140 on April 11-12, 145 on April 13-15, 150 on April 16-18, 140 on April 19, 135 on April 20-23, 130 on April 24-27, 125 on April 28 through May 3, and 140 on May 4-6.

In yesterday's ARRL Letter we reported the prediction from Wednesday, April 9 showed an average daily solar flux of 133.3 over April 10-15. But just two days earlier, on Monday April 7 the predicted average for the same period was 142.5, and back on March 30 the prediction for April 10-15 showed an average solar flux of 145.8. The predicted solar flux for April 10 was 150 on March 30, 140 on April 7 and 130 on April 9, which indicated a progressively pessimistic outlook.

However, the April 10 prediction showed higher values. For April 11-18, average solar flux is predicted at 145.6, ten points higher than the prediction for the same eight days on April 9, which was

135.6.

Predicted planetary A index is 5 on April 11, 8 on April 12, then 12 on April 13, 8 on April 14-15, 5 on April 16-18, 8 on April 19, then 5 on April 20 through May 5, and 8 on May 6-7.

OK1HH predicts a quiet geomagnetic field on April 11-13, mostly quiet April 14, quiet to unsettled April 15-16, quiet to active April 17, quiet April 18, mostly quiet April 19-20, quiet to active April 21, quiet to unsettled April 22, mostly quiet April 23, quiet on April 24, mostly quiet April 25-26, quiet April 27, mostly quiet April 28, quiet on April 29, mostly quiet April 30, quiet May 1-2, mostly quiet May 3, quiet to unsettled May 4, quiet May 5, quiet to unsettled May 6, and back to quiet again on May 7-8.

A week ago (but too late for this bulletin) NASA released their monthly Solar Cycle prediction, little changed from the March version:

http://solarscience.msfc.nasa.gov/predict.shtml
http://solarscience.msfc.nasa.gov/predict.shtml

The forecast begins, "The current prediction for Sunspot Cycle 24 gives a smoothed sunspot number maximum of about 70 in the late summer of 2013. The smoothed sunspot number reached 73.1 in September 2013, so the official maximum will be at least this high."

The March forecast said "The current prediction for Sunspot Cycle 24 gives a smoothed sunspot number maximum of about 69 in the late summer of 2013. The smoothed sunspot number reached 68.9 in August 2013, so the official maximum will be at least this high."

These are smoothed numbers, averaged over a year, so that is why the numbers from the end of last summer changed, because recent higher activity is now averaged in.

Here is an interesting article, "Small Groups, Big Flares" from Belgium's Solar Influences Data Center:

http://sidc.oma.be/news/245/welcome.html http://sidc.oma.be/news/245/welcome.html

Wayne Starnes, KU4V of Cary, North Carolina sent an email concerning the radio blackout mentioned in last week's bulletin:

"Yes I also experienced the blackout during the CQ WPX, but do not actually recall the time it happened. I was running on 10M as I recall and BOOM 20+ atmospheric noise on the band! I then checked 10m-160m and it was the same intensity on every band. I have never heard anything like it.

"Then, after a few minutes, it stopped and the bands seemed to be in better shape actually.

"Then, Sunday 30-Mar at 1503 UTC while running 10m, YB2DX calls me, very weak but we made it. At 1522 UTC YC0IEM calls me, again very weak but we made it. At 1547 UTC 4Z5ML called.

"After the contest, 31-Mar after 0200 I worked the TX5 guys on 10 and 15.

"Amazing and interesting propagation this past weekend."

Chris Wreck, K2HVE of Bayonne, New Jersey wrote: "Yes! It was the same at my station, K2HVE. I am located in Hudson County, 1.5 miles SW of the Statue of Liberty and 2.5 miles SW of WTC in lower Manhattan. I was on 20 meters during the CQ WPX Contest on Saturday 29 March working EU and Russian stations one after another when around 1750 UTC the whole band was wiped out. Nothing but noise at an S3 level. It was like somebody pulled my antenna wire out. I began checking antenna connections on my IC-7600 and found nothing.

"Very shortly a NOAA SWPC alert came through noting the solar flare. The disturbance lasted about 30-45 minutes, then slowly the US Stations came back up and shortly after the EU Stations. In an hour it was like nothing had ever happened. In all the years I never had anything so sudden happen at my QTH regarding Ole' Sol."

Jon Jones, N0JK sent a correction concerning working long path on 6-meters.

"Fred, KH7Y made the first 6 meter Hawaii to Europe TPL (trans-polar longpath) contact of solar cycle 24 with IT9 on February 28. But it was TPL going southeast of Hawaii. It took place in the early afternoon HST (Hawaii Standard Time).

"I think I made the first Hawaii to Europe TPL contact of Solar Cycle 24 going southwest of Hawaii March 30 with S57RR. It was around midnight HST for me."

Jon also reported, on April 10: "During the last week many contacts were made in the afternoon from the Gulf Coast and southern parts of the Midwest to CX, LU and PY in South America on 6 meters. A few fortunate hams in AR, MO and OK worked the Falkland Islands. The propagation mode is 'afternoon TEP.' This link has information about this propagation mode:

"http://home.iprimus.com.au/toddemslie/aTEP-Harrison.htm
http://home.iprimus.com.au/toddemslie/aTEP-Harrison.htm

"Not much to report since arriving home (to Kansas) from Hawaii. I heard CE4WJK working CO2QU on April 6 at 2100 UTC on 50.140 MHz.

"Today April 10 heard the K5AB/b 50.060 MHz on Es at 2350 UTC."

Thanks, Jon!

Scott Craig's Solar Data Plot Utility has an updated data file, useful if you are just starting out with the program. Otherwise you update it auto-magically weekly with this bulletin.

You can find it at http://www.craigcentral.com/sol.asp http://www.craigcentral.com/sol.asp.

This program runs on Microsoft Windows, but I've never been able to use it on Windows 7 computers, so I've used a virtual XP mode or just my old XP machine. Now I see Microsoft has ended support for XP.

This weekend is the Japan International DX CW Contest. See details at http://jidx.org/ http://jidx.org/.

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net. mailto:k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at http://arrl.org/propagation-of-rf-signals. http://arrl.org/propagation-of-rf-signals.For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. http://arrl.org/the-sun-the-earth-the-ionosphere.An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. http://arrl.org/w1aw-bulletins-archive-propagation.More good information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for April 3 through 9 were 137, 174, 172, 127, 106, 94, and 95, with a mean of 129.3. 10.7 cm flux was 153, 156.9, 142.1, 140.9, 139.9, 132, and 130.6, with a mean of 142.2. Estimated planetary A indices were 6, 6, 14, 5, 11, 5, and 5, with a mean of 7.4. Estimated mid-latitude A indices were 7, 5, 11, 3, 10, 4, and 5, with a mean of 6.4.

Hi all,

Don't mean to insult anyone's intelligence but just a note of caution. If you need to know the true UTC, or Zulu, time listen to WWV Fort Collins Colorado, or other time stations. Be aware that some, if not most, international time clocks on our Cell Phones, I-Pads or Tablets show London England with summer time which is one hour different from UTC. I got caught with that one once.

73, Tony VE3DWI.

From: ron
Topic: 1153  Message: 1906

Ten Tec CW net every Monday night on 7063 +/- 7:30 Eastern Time.

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AK (sent together) means STANDBY.

When do I ck in?

After u hear QNI, send the last two letters of ur call. This gives others a chance to sign in, and reduces interference. I may, because of doubling and tripling, get your last 2 letters incorrect. Please, send ur call once.

If I didn’t get you, be patient as I will call for a new list later.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

Thank goodness, Spring is coming!

73

It would be nice to see the brands of radios being used. Thus one could get an idea of the popularity, in terms of numbers, of the various models and brands. Of course many ops have different brands and models they use from time to time thus the matrix would get a bit complex. Still it would be nice to disclose the various brands and models.

I participate in a couple of traffic nets on a regular basis. Two of the NCS's across the state are using Tentec radios. Myself and those two NCS's have little difficulty in copy of most all of the stations. It is noted that most of the other NCS stations, using non-Tentec radios, frequently need a relay for many of the check ins. This makes one wonder if the Tentec radios are really that much better than many of the other brands.

I know for a fact, consistently the transmit audio of the stations both NCS and others that use Tentec radios, seems to have better to much better audio quality.

# 1937. RADIO'S WITH BEST RECEIVERS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-04-17 18:27:23 UTC
From: John Occhipinti
Topic: 1937  Message: 1937

I would like to add my 2 cents to the conversation about which radio has the best receiver. This is just like asking which car can get you faster to a specific location. Or, which gun can shoot straighter and shoot farther.

When we talk about radios and the receiving capabilities they have, let us not forget one of the most important factors that must be considered and this is the antenna.

Some people have antenna restrictions where they live and are limited to having a wire in their attic. Others have to hide their antennas on a flag pole and these are compromise antennas.

Others must use a vertical antenna, which is better, but will not do justice to the very best receiving radio's on the market.

Compare these less than desirable antennas with a directional beam and full loop wire antennas and it is like night and day as far as reception is concerned.

We are not done yet. We must look at "roofing filters" and other filter capabilities built into the radio. What kind of adjacent channel rejection does it have?

On my Orion II and Omni VII, I can reduce the RF Gain down to 30 percent and still hear weaker signals.

Another factor that allows me to hear weaker signals when I run the 40 meter and 20 meter TEN-TEC SSB Nets, is that I use Earbuds (good headphones will also give you a big advantage).

Others here have other opinions on the radio's receiving capabilities and I welcome them to post them here. Thank you for keeping this reflector active and a source for valuable information.

Clayton et al:

I've always been amused and at the same time not clear on the typical level of Tentec bashing, both on the reflectors and on the air. Oh sure there are some skeletons in the TT closet of products, but darn it, every company has their glass eggs in their proverbial baskets as well. Frankly I don't see any company providing any notable difference in terms of better products.

On the other hand, what I do see is the ham community favoring products with lots of features, otherwise known as "whistles and bells". Since I believe the ham community in general does not have or does it exercise the ability to recognize performance vs. glitz and glamour, those models with slick advertising seem to be at the winning edge. Plus it is my understanding the larger companies are much more prone to provide equipment for DX Expeditions in favor of receiving endorsements for the same.

I guess it is the marketing style and not the product performance that wins.

# 1940. A very Bad Joke

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-04-18 01:59:12 UTC
From: Bob McGraw - K4TAX
Topic: 1940  Message: 1940

Some months ago a dear friend of mine along with myself decided to engage in a project to find out if indeed a group of hams that we both frequent on the air were really honest and truthful, knowledgeable and skillful.

For the project, we each put new radios on the air and used them with the groups for about 3 weeks each. Initially we disclosed the brand and model of the new radios. I frankly was amazed at the positive comments about my signal quality and even in some cases the signal strength was vastly improved although the old radio was 100 watts and the antenna a dipole. The new radio was 100 watts and used the same dipole antenna. We gladly accepted the complements, acknowledging the comments as we were making radio adjustments and asking for opinions.

After three weeks we disclosed that we had to go back to our original radios as the new radios were now being used by another group. From that point our signal reports went down, the audio quality was reported as not being as good as the new radios. The older radios were reported to be often "off frequency" and often noted to drift. There were other comments that followed along the same venue.

Well after a couple of weeks using the "old radios" there were questions about the where-a-bouts of the new radios and when we would get them back and have them on the air again. Finally at the same given time, we had to let the "cat out of the bag" and disclosed that for the past 5 weeks we have been using the same radio, the same mike and the same antenna for the rouse. The silence on the other end was absolutely amazing.

I suppose it goes to show, it isn't what is being heard on the air, but what is said that forms the opinions. I suppose one can say "friends through thick and thin" and then there are those that are only around during "thick". Yep, as in basket ball, they had been faked out of their shoes and many weren't too happy about it either.

Yep, I must admit it was a BAD JOKE as some of the fellows were so embarrassed they now refuse to speak to either of us. I regret that point in itself.

73
Bob, K4TAX

P.S. - The radio of choice is the Tentec Omni VII with the Tentec 707 mike.

Y I USE A TEN-TEC RADIO.
In 1990 I bought a TEC-TEC 544 Triton as a new Ham. I had station ask me "what radio are you using?
You have great audio" After several times of this happing I was amazed and this still happens to this day. Maybe this story is why I bought another one for a pair which I still use to this day.
I was at Hamtronics in PA one day in 1985 before I was a Ham and a dark sedan town car pulled up with FL plates and the driver got out and asked me if they sold shortwave radios there and since it was my first time there I did not know.
After we came out of the store because they didn't have what we wanted the driver ask where else might have them. I asked where are you headed for, and He said FL.
I said go to Mike's Electronics in Fort Lauderdale, FL and see the owner Mike Spivak.
I said He well take care of you and stands by what he sells. Like TEN-TEC DOES.
I said I listen to Radio Canada all the time with Mr. McFarland as the host.
Then the door opened and the Great One got out with his Wife Marilyn and I had in the middle of a parking lot a great eye to eye qso with Jackie Gleason for over one hour about shortwave radio programs, what kind of antennas to use and what host we liked the best on what shortwave show.
Jackie said he had a elaborate listening station on the second floor of his house destroyed by fire some years back and wanted to put in another one.
You never know who is listening, and I enjoyed a shortwave listener who loved radio most of all and said so.
Jackie bought two IC-71 receivers from Mike because he wanted a back up in case one failed because he didn't want to miss a radio show. Later in early 1986 he bought a pair of IC-7000 VHF/UHF receivers and a pair of Sony ICF-2010 portables. A lot more radios made it into his fourteen room estate with a world band antenna on top of his house.
He added a 16 element scanner antenna as well. That info came from Reporter Angie Cannon with the Miami Herald just before his death in June 24, 1987.
So there you have it, a Short Wave Listener in a 20 by 20 foot library tuning in the world, The Great One, Jackie Gleason. And Away We Go..

It would be nice to see the brands of radios being used. Thus one could get an idea of the popularity, in terms of numbers, of the various models and brands. Of course many ops have different brands and models they use from time to time thus the matrix would get a bit complex. Still it would be nice to disclose the various brands and models.

From: John Occhipinti
Topic: 1947  Message: 1947

We need to give John K3UR a liitle more work and therefore a TEN-TEC Special Event Holiday Net will be held tomorrow, Saturday at 1:30PM Eastern Time on 14.325. Everyone checking into this net will receive a bonus checkin credit from John K3UR. I am sure he will agree to this generous action.

So, just check in with John, K3UR and you will receive credit for 2 checkins. The very first person that John hears on 14.325 will receive an additional bonus checkin credit, for a total of 3 checkin credits.

We have been having many new people check into our nets with other radios and a great deal of them compliment the operators who are using TEN-TEC radios. This is only half of the pie. The great receive capabilities of the TEN-TEC radios complete the icing on the cake, or should I say the pie!

We are asking Andy W3LI in PA and Tony VE3DWI in Canada to track all those using non TEC-TEC radios tomorrow.

These 2 "giants" were a tremendous help to John K3UR this past week when 55 people checked into the 20 meter net on Wednesday.

John will be looking for Lloyd, N2KPC in NJ for his assistance also and hopes that John KC2QMA in TN will stream the live audio over the internet.

Let's hope that John K3UR agrees with all of this and runs the net tomorrow. If you think this is a good idea, send John a little note. Thank you.

# 1951. Common Mode Choke

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-04-19 12:22:26 UTC
From: Mark Erbaugh
Topic: 1951  Message: 1951

We were discussing common mode chokes at the radio club meeting last week. Another ham has a vertical with raised radials and says that the CMC has drastically quited his antenna. My verticals are ground mounted with radials and the feedline just below the sod. The other ham thought that a CMC isn't necessary with ground mounted verticals.

Utter NONESENSE.

Common mode current is always present in all antennas; but luckily it is often at a level low enough to do no damage.

Also, there are HUGE differences in the different circuit designs for common mode chokes.

The most common one is the W2DU (ferrite beads over coax) and in most cases it will suffice, but for nasty cases it won’t.

In that case you should use a Guanella choke.

If you really want an effective choke, you can’t do it all with just one choke.

You need two, better 3 different ones to cover the entire hf spectrum.

But as I said, that is only when you have real bad trouble with common mode current.

In general, I view any feedline in the presence of any antenna will have current, a.k.a. CMC, induced into the feedline the result of the antenna radiating RF.

I think the law of physics states "any conductor in the presence of an electrometric field will have a current induced in said conductor in proportion to the strength of the field". Something like that.

As Rick stated, most of the time CMC is not an issue although it always exists. I've found the MFJ RF amp meter that can clamp around a coax feedline will show the amount of current that is flowing on the outside of the feedline.

Ron / WB1HGA,

Just wanted to say thanks again, for posting the Check-in List. Its nice to see who all participated. It also lets everyone to check to see if there are any typo's or errors or any exclusions.

Thanks for all of your efforts.

IMHO... The Net has already proven itself existence and is a pertinent part of the Ten Tec Net family.

Happy Easter

73

Thanks Roger for the kind words.
I originally started this net early last year but it lasted for a few weeks.
I restarted the net at end of summer and I am happy its still running.

Hi Everybody,
Hope your Easter was a safe travel to and from love ones.
I spent Friday night at the W2ZQ and was working on my EME Antennas and on a portable tower at 4:30 am
Sat..
So I didn't see the change in the times before I left the W2QZ Shack at 5:00 am.
When I came back to work the 20 meter net I found a stalled freight train which made me 10 minutes late.
No matter how hard I tried to move that train it would not move, HiHi.
Anyway, I did start the 10 meter net and let John know I was there on 40 meters and would return to forty, then go to 20 then I posted that I would go back to 10.for a second try after I finished on 20 after I checked with John, K3UR.
I am sure that we will have all our Easter Ducks in a row next year quacking right along.
I had four Hams call the W2ZQ and one on the air looking for the 10 meter net Sunday and everybody wished everybody a Happy Easter and said "I see you next week".
Just a bump in the road that will be fixed as we go along. The Drive is nice.
C U next Sunday, looking forward to it.

# 2002. 64,000 dollar question. 4 years ago

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-04-23 03:07:47 UTC
From: <n2kpc@...>
Topic: 2002  Message: 2002

64,000 dollar question. I have often wondered what people were doing on Sunday afternoons, while there were no TEN-TEC nets for 4 years? Asked John, K3UR.

Four Years ago My Wife, Gaye KB2YOA and myself, Lloyd N2KPC would drive to Toms River, NJ on Thursday night to setup up a TEN-TEC Radio with a SPI-RO D-56 10-80 meter dipole running from the flagpole to a shed and demo the TEN-TEC Radio every night for a period of six and one half at the NJ2AR Club JSARS from 5:00 PM to 11:30 and sometimes until 2:00 AM.
Then since I had a 4 day until a few months ago we went surf fishing and bird watching and worked DX with
our TEN-TEC Radio on the beach Friday, Saturday and Sunday on Island Beach State Park and the Gas was under $2.75 a gallon.
No TEN-TEC Nets to do, No Log checkins to do, Few New Radio Friends, No TEN-TEC Family, No Have a Blessed day in emails and on the air on a regular basis. But Jim Wharton and Stan Brock where there help Hams, My Wife and I were telling folks about how We like the TEN-TEC Radios, Service, and what A great Hamfest too.

Well now lets see four years to now..... Look at all the New TEN-TEC People on the air on one frequency creating havoc by trying to check in to a 10 meter net, Then they do it again on 40 meters in another pile up.
Then they DO IT AGAIN on 20 meter. Then they have the nerve to do it again on CW no less on Monday night. And to top that they do it again on Wednesday Afternoon to interrupt some Ham named John in Ga trying to take a nap. Then EU gets into the act by speaking lingo I can't copy talking about TEN-TEC stuff.

Then some guy in TN sends you a large ticket in the mail if you do it 10, 25, 50 and 100 times and if you check in 100 times you get a big box in the mail from that guy in TN. Who does he think he is sending you something that's good for you?

Then there is a guy in NJ with 21 Club Members of which 17 regularly check in to THE TEN-TEC Nets who are saving up for a TEN-TEC Omni 7 to help with the Havoc on these nets, They got to be out of their minds. So now We spent our time with them in West Trenton, NJ USA
God Bless the TEN-TEC Family each and everyone of you.
That should answer K3UR, John's 64000 dollar question

73,
Gaye, KB2YOA and Lloyd, N2KPC

Well you can't stop progress and I wish them all the luck in the world.
I wished I had not locked in my vacation time , advance motels and the same for my Wife for the whole week because our cut off time for setting dates for vacation was 2 weeks ago. our loss this year 2014.
but there always 2015.
Hopefully, the new site will have a Antenna Farm, Hamfest Site, Heated Pool, RV Hookup, AC, Jacuzzi,
Three Flagpoles out front US, TN, TEN-TEC Flags flying out stretched from the breeze from the runways with the
Warbirds warming up on the TEN-TEC airport parking site next to the Bird Feeders at the new Nature Center with the Bass Lake next to the Bass Boat ramp at Lake TEN-TEC with the snake proof swimming site.
Oh Yeah, I almost forgot the Music Center with the K3UR Parking Spot out front.
The tough one is to find a street name to top Dolly Parton Pkwy, That why We are lucky to have JW at the helm because it is really hard to find a high hill for the antenna farm with a runway and a large lake right next to one another with a street name to match. Maybe some thing with TEN-TEC in it for the street name, airport, lake, rv park, and nature center.
Don't forget the Music Center with the Big O in the name of course for the first song written about TEN-TEC by the big O.

73,
Lloyd N2KPC I was going to sign it Andy, W3LI but I didn't want him to get blamed for this, HiHi.

I have 12 amp my Scout.
Also, keep transmission short when using those modes.
The Scout is not 100 percent duty cycle.
It also helps keep the RF output low too.
I had small dc fan in rear whenever I used the Scout for digital modes.

The 555 is a lot of fun playing radio.

Hamfest or not, the wife and I will be camping at Elkmont in the Smokies. I'll be operating the Eagle on multiple bands from the camper. Schedule made, money paid, we'll be there. And will miss seeing many of you folks.

Until next year.

WOW! My first year of retirement and the fest was on my list. I have a sister and her family in Knoxville and my oldest son Scott, K3GOL also in Knoxville so this was going to be a family week ,which includes the TenTec folks and the net folks as well, K3UR, N2KPC and many others.
Hope the move goes off without a hitch. Good luck Jim and the best in the future.
Andy, W3LI

Lloyd, I have already written a song for the TEN-TEC Hamfest, when the new facility opens. The name of the song is "I'm Turning My Beam".

I will give you a teaser on some of the words.

I'm turning my beam, I want you all on my team,
together we can all fulfill our dream,
just like peaches and cream and cherry supreme,
the desert is coming when I turn my beam.

You will have to wait for the TEN-TEC Hamfest, unless I decide to upload it on SoundCloud. I'll see you in Sevierville next year.

Andy, I will give you a hint. I was a teenager in the 50's and my former music affiliations inspired me to make the music with a similar sound.

Of course this is a sound you never heard before. So, nothing was borrowed or copied.

This is why we call it an Original Song.

I will talk to you on Sunday when I return back home.

Space Weather News for April 25, 2014
http://spaceweather.com http://spaceweather.com/

X-FLARE: On April 25th, an active region near the sun's western limb erupted, producing an impulsive X-class solar flare. A pulse of extreme UV radiation from the flare ionized Earth's upper atmosphere and caused a shortwave radio blackout on the dayside of Earth. However, a CME hurled into space by the explosion will miss our planet. Check http://spaceweather.com http://spaceweather.com/for updates.

SOLAR FLARE ALERTS: Would you like a call the next time the sun erupts? X-flare alerts are available from http://spaceweathertext.com http://spaceweathertext.com/(text) and http://spaceweatherphone.com http://spaceweatherphone.com/(voice).

Indianapolis Students to Connect Live with International Space Station Crew

Students and educators from Butler University in Indianapolis will at gather at Children's Museum Indianapolis for a live conversation with astronauts currently aboard the International Space Station.
NASA astronauts Rick Mastracchio and Steve Swanson, and Japan Aerospace Exploration Agency astronaut Koichi Wakata, will talk with the students at 10:20 a.m. EDT Tuesday, April 29, about life and work in space. The event will be broadcast live on NASA Television and the agency's website.
Media interested in covering the event should contact Becky Wolfe at 317-334-4618 or beckyw@childrensmuseum.org mailto:beckyw@childrensmuseum.org. Children’s Museum is located at 3000 N. Meridian Street in Indianapolis.
Educators have been preparing their students for the conversation with the crew by incorporating NASA activities in their classrooms. This in-flight education downlink is one in a series designed to improve science, technology, engineering and math, teaching and learning. It is an integral component of NASA's Teaching From Space education program, which promotes learning opportunities and builds partnerships with the education community using the unique environment of space and NASA's human spaceflight program.
For NASA TV streaming video, schedules and downlink information, visit:
http://www.nasa.gov/nasatv http://www.nasa.gov/nasatv
For information about NASA's education programs, visit:
http://www.nasa.gov/education http://www.nasa.gov/education

For information about the International Space Station, visit:

Michael et al:

We usually make 2 trips per year to the Elkmont Campground. I take the Eagle and have it configured with a mobile antenna on the travel trailer. And sometimes I just hurl a wire up in the trees and let the internal tuner do its job.

From Elkmont it is about a 30 minute ride to TenTec. I'll miss them not having a hamfest this year, but the wife and I will still be camping in the area as planned.

I've had birdies for a long time. One of them being on 10 mtr 28.440. Took a good long while to find the source....

Tracked it down to being my Eithernet Cable. As long as its plugged into my computer, I get spontaneous birdies all around certain bands/frequencies.

So in retrospect, if I want to listen for Lloyd on Sundays 10 mtr Net, I have to disconnect my internet conection.

For those who need more than 24 hours notice, I am changing the Band for Wednesday's TEN-TEC Net. This, as all decisions I make is being done with the requests and input from many of our net members.

I will talk to many of you tomorrow.

Couldn't hear anyone on 28440, except for the "birdie". Mobile NW of Chicago, birdie is not local.

John was S3 on 40 and S0 on 20, very poor conditions. Lloyd and Andy were S9 plus on 20, I'll let you two know when I'm going to Secaucus in the next month or so, maybe we can get together.

Thanks John, Lloyd and all the relays for all the work you put into the nets, John, look for you Wed on 14325.

The TEN-TEC 10 Meter SSB Net had 10 Check ins NJ-9, PA-1.
The W2ZQ DVRA Club Shack had the pleasure of a visit from Phil "Andy" W3LI from Long Pond, PA.
Also my Wife Gaye KB2YOA had a Sunday off from work and was able to make the drive to West Trenton to
meet Andy W3LI too.
Also had Mike AC2MW and Ed KE4IED here as well. Ed just bought a TEN-TEC Eagle and loves it.
The SFI was 118 today, not good for 10 Meters and Big Thank You for all who tried and sent emails.
Have a good week and don't forget Ron' WB1HGA CW 40 Meter Net Monday night and John K3UR Wednesday SSB Net that will be on 20 Meters on 14.325 at 2:00 PM NOTE change from 40 to 20 this week
for John's K3UR Net.
73, Have a Blessed week from Gaye KB2YOA and Lloyd N2KPC NCS RNCS .-.-.-

# 2042. WB1HGA RON SOUNDING GREAT IN NJ ON THE TEN-TEC CW NET

One of the nice things about manual tuners is their wide range and their ability to match complex loads. I use a balanced tuner, mostly because I use a balanced feed system, to match the 256 ft center fed wire on all bands, 160M - 10M. The automatic tuner just won't cut it for that job.

That's true Tony and I will try but no guarantees. I'll listen. I have a Ten Tec 229 tuner that I'll use. Thanks for looking out for me.

Ralph

Ralph,?

If you have a manual tuner, you can probably load the rig on, 20 mtr, into whatever antenna you have. ☐ I may be able to hear you. Gud luck.

This change was a bad idea!  Can barely hear anyone and didn't get an answer from anyone for a relay.  Bad weather here in Myrtle Beach.  Thunderstorms in the area but not bad enough to keep me from trying.

Running my Omni VI+ and SB-1000.

Let's get back on 40 meters where might have a shot.

Clayton N4EV

VK3EY Australia 14,071.1 PSK 2014-30-04 12:02 AB9M PSK31 23
VK4HG Australia 14,071.0 PSK 2014-30-04 11:38 AB9M PSK31 80

The first two entries, VK4HG and VK3EY , were both copied Long Path at times when the European stations are usually strong. At the moment there are few signals seen on the FLEX-1500 panadapter, and those that are are barely above the noise. I monitor 20 meter PSK-31 signals with either my Corsair-II or OMNI-VII with the FLEX-1500 as a sub-receiver using the N4PY modification with WinWarbler to decode and the stations logged locally by SpotCollector (DXLab Suite by AA6YQ) to a hard drive. Each week I send a condensed QSN report to N4AA for the QRZ DX newsletter.

73 & DX,
Gary - AB9M

Hi John,

Well, the fact that you had many complain about reception today obviously isn't your fault. Conditions were horrible! At a couple points, you were 20 dB over S9 and at others, you dropped into the noise. It is just conditions! I know for the last week or so, I finally got back on the air after being in the hospital, and hoped to have fun, but conditions for the last week whenever I have listened have been horrendous!

Thanks for the work you do on the Ten-Tec nets. It is very much appreciated!

All the best & 73,
Bill

Bob,

You are so right. I've had a double extended Zepp antenna, fed with ladder line, for about 20 years and use it with a TenTec 238B tuner. On 80 and 40 mtr I get great reports. I use my Mosley CL33 tribander on 20 mtr for the TenTec net but there are times, like this afternoon, that I can hear some stations better on the Zepp then on the beam. Off course it is not as directional as the beam and that plays a part too. Anyway, it is a great "all-band" antenna.

Tony, VE3DWI.

☐

One of the nice things about manual tuners is their wide range and their ability to match complex loads. I use a balanced tuner, mostly because I use a balanced feed system, to match the 256 ft center fed wire on all bands, 160M - 10M. The automatic tuner just won't cut it for that job.

Here's some pixs of my balanced tuner. I built this about 3 years ago using some 1/4" thick Plexiglas. The rollers are 65 uH each and are EF Johnson roller inductors, abt 3" in dia and about 9" long with #12 silver plated wire. The variable C is a Cardwell from the junk box. The group of banana plugs on the rear are configured with jumpers so as to be able to use the C on the input or the output depending on Z required for matching. The black looking snake across the bottom is a bead type balun made of 55 beads of #43 material and about 10 beads of #73 material on RG-313 Teflon coax. Thus it is always in a 1:1 SWR 50 ohm position.

I've used balanced fed antennas for years and have always had very good success with them.

Due to some of the emails that I received in the last 2 days and upon the suggestion of several of my loyal supporters, I am cancelling the TEN-TEC 20 meter net for next Wednesday May 7th.

The following Wednesday May 14th is the week for the Dayton Hamvention and the TEN-TEC Wednesday 20 meter net for that day May 14th will also be cancelled, as I will be traveling in preparation to attend the Dayton Hamvention.

I did not take the responsibility for the TEN-TEC nets to receive any accolades and realize that I cannot please every member of the TEN-TEC nets.

My decisions are based on input from many of our net members and what is expedient for the majority of the net members. I appreciate each member of the TEN-TEC nets and wish the best for everyone. Thank you.

John, K3UR

# 2071. Carrington-class CME Narrowly Misses Earth

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-02 20:39:21 UTC
From: <n2kpc@...>
Topic: 2071  Message: 2071

May 2, 2014: Last month (April 8-11), scientists, government officials, emergency planners and others converged on Boulder, Colorado, for NOAA's Space Weather Workshop—an annual gathering to discuss the perils and probabilities of solar storms.

The current solar cycle is weaker than usual, so you might expect a correspondingly low-key meeting. On the contrary, the halls and meeting rooms were abuzz with excitement about an intense solar storm that narrowly missed Earth.

"If it had hit, we would still be picking up the pieces," says Daniel Baker of the University of Colorado, who presented a talk entitled The Major Solar Eruptive Event in July 2012: Defining Extreme Space Weather Scenarios.

http://www.youtube.com/watch?v=7ukQhycKOFw A new ScienceCast video recounts the near-miss of a solar superstorm in July 2012. Play it

The close shave happened almost two years ago. On July 23, 2012, a plasma cloud or "CME" rocketed away from the sun as fast as 3000 km/s, more than four times faster than a typical eruption. The storm tore through Earth orbit, but fortunately Earth wasn't there. Instead it hit the STEREO-A spacecraft. Researchers have been analyzing the data ever since, and they have concluded that the storm was one of the strongest in recorded history. "It might have been stronger than the Carrington Event itself," says Baker.

http://science.nasa.gov/mailing-lists/subscribe/

The Carrington Event of Sept. 1859 was a series of powerful CMEs that hit Earth head-on, sparking Northern Lights as far south as Tahiti. Intense geomagnetic storms caused global telegraph lines to spark, setting fire to some telegraph offices and disabling the 'Victorian Internet." A similar storm today could have a catastrophic effect on modern power grids and telecommunication networks. According to a study by the National Academy of Sciences, the total economic impact could exceed $2 trillion or 20 times greater than the costs of a Hurricane Katrina. Multi-ton transformers fried by such a storm could take years to repair and impact national security.

A recent paper in Nature Communications authored by UC Berkeley space physicist Janet G. Luhmann and former postdoc Ying D. Liu describes what gave the July 2012 storm Carrington-like potency. For one thing, the CME was actually two CMEs separated by only 10 to 15 minutes. This double storm cloud traveled through a region of space that had been cleared out by another CME only four days earlier. As a result, the CMEs were not decelerated as much as usual by their transit through the interplanetary medium.

http://science.nasa.gov/science-news/science-at-nasa/2009/21jan_severespaceweather/ A report by the National Academy of Sciences details the consequences of extreme solar storms. More
http://science.nasa.gov/science-news/science-at-nasa/2009/21jan_severespaceweather/

Had the eruption occurred just one week earlier, the blast site would have been facing Earth, rather than off to the side, so it was a relatively narrow escape.

When the Carrington Event enveloped Earth in the 19th century, technologies of the day were hardly sensitive to electromagnetic disturbances. Modern society, on the other hand, is deeply dependent on sun-sensitive technologies such as GPS, satellite communications and the internet.

"The effect of such a storm on our modern technologies would be tremendous," says Luhmann.

During informal discussions at the workshop, Nat Gopalswamy of the Goddard Space Flight Center noted that "without NASA's STEREO probes, we might never have known the severity of the 2012 superstorm. This shows the value of having 'space weather buoys' located all around the sun."

It also highlights the potency of the sun even during so-called "quiet times." Many observers have noted that the current solar cycle is weak, perhaps the weakest in 100 years. Clearly, even a weak solar cycle can produce a very strong storm.

Says Baker, "We need to be prepared."

May 2, 2014

MEDIA ADVISORY M14-085

International Space Station Crew to Connect Live with Idaho Students

NASA astronauts and Expedition 39 Flight Engineers Rick Mastracchio and Steve Swanson, currently orbiting Earth aboard the International Space Station, will speak with students and educators at Boise State University in Boise, Idaho, Tuesday, May 6, at 11:55 a.m. EDT. The event will be broadcast live on NASA Television and the agency's website.
Media interested in covering the event should contact Ellie Rodgers at 208-426-5738 or ellierodgers@boisestate.edu mailto:ellierodgers@boisestate.edu. Boise State University is located at 1910 University Drive in Boise.
Former NASA astronaut Barbara Morgan, who flew on space shuttle Endeavour's STS-118 mission in 2007 and currently is an educator-in-residence at the university, also will participate in Tuesday's event, which focuses on living and working in space.
Educators have been preparing their students for the conversation with the crew by incorporating NASA activities in their classrooms. A group of Boise State students working on this event have dubbed themselves the "Space Broncos" and are working on maintaining a social media site and developing educational demonstrations for Swanson, who has been named a "Professor of Practice" by Boise State, to perform in orbit.
This in-flight education downlink is one in a series designed to improve teaching and learning science, technology, engineering and mathematics (STEM). It is an integral component of NASA's Teaching From Space education program, which promotes learning opportunities and builds partnerships with the education community using the unique environment of space and NASA's human spaceflight program.

This note is for some of the new Hams too.

Welcome to the New Hams that I have had the pleasure of talk to on the air and have meet this week in person at the Tractor Supply Safety Day near Mount Holly, NJ.

Also the Hams from Fort Dix Army and Lakehurst Navy and McGuire AFB Joint Base here in New Jersey in the
good old United States of America. We welcome you to the TEN-TEC Nets and Thank You for your SERVICE
TO OUR COUNTRY, Past Present and Future, AMEN.

History of American Flag.
For more than 200 years, the American flag has been the symbol of our nation's strength and unity. It's been a source of pride and inspiration for millions of citizens. And the American Flag http://www.usa-flag-site.org/ has been a prominent icon in our national history. Here are the highlights of its unique past. On January 1, 1776, the Continental Army was reorganized in accordance with a Congressional resolution which placed American forces under George Washington's control. On that New Year's Day the Continental Army was laying siege to Boston which had been taken over by the British Army. Washington ordered the Grand Union flag hoisted above his base at Prospect Hill. It had 13 alternate red and white stripes and the British Union Jack in the upper left-hand corner (the canton). In May of 1776, Betsy Ross reported that she sewed the first American flag.

On June 14, 1777, in order to establish an official flag for the new nation, the Continental Congress passed the first Flag Act: "Resolved, That the flag of the United States be made of thirteen stripes, alternate red and white; that the union be thirteen stars, white in a blue field, representing a new Constellation."

Between 1777 and 1960, Congress passed several acts that changed the shape, design and arrangement of the flag and allowed for additional stars and stripes to be added to reflect the admission of each new state.
Act of January 13, 1794 - provided for 15 stripes and 15 stars after May 1795.
Act of April 4, 1818 - provided for 13 stripes and one star for each state, to be added to the flag on the 4th of July following the admission of each new state, signed by President Monroe.
Executive Order of President Taft dated June 24, 1912 - established proportions of the flag and provided for arrangement of the stars in six horizontal rows of eight each, a single point of each star to be upward.
Executive Order of President Eisenhower dated January 3, 1959 - provided for the arrangement of the stars in seven rows of seven stars each, staggered horizontally and vertically.
Executive Order of President Eisenhower dated August 21, 1959 - provided for the arrangement of the stars in nine rows of stars staggered horizontally and eleven rows of stars staggered vertically.

Today the flag consists of thirteen horizontal stripes, seven red alternating with 6 white. The stripes represent the original 13 colonies, the stars represent the 50 states of the Union. The colors of the flag are symbolic as well: Red symbolizes Hardiness and Valor, White symbolizes Purity and Innocence and Blue represents Vigilance, Perseverance and Justice

10 meter SSB net, Sunday 1PM Eastern Time on 28.440. Lloyd N2KPC, Net

Same here. 40 meters was noisy, but I could hear. Noise floor was about –115 dBm. I did get recognized at 1800 UTC and John came up to S-9 on the FLEX-1500 sub-receiver (N4PY mod) of the OMNI-VII.

Rig – Heil HC-6 microphone into a TT-715 driving an OMNI-VII to 100 W into a HF-2V over twenty-four 66 foot radials. Probably NOT the most pleasing audio, but effective communications quality (12 dB clipping with 200 Hz TX Roll Off and 2800 Hz TX BW).

John K3UR was running S-2 to S-3 most of the net while some signals were 20+ over S-9. I started with the Omni VII via the internet but resorted to local control so I could use the amp.

I figure the contest ops yesterday consumed all the propagation and they did not leave any for today. :-)

Ten Tec CW net every Monday night on 7063 +/- 7:30 Eastern Time.

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AK (sent together) means STANDBY.

When do I ck in?

After u hear QNI, send the last two letters of ur call. This gives others a chance to sign in, and reduces interference. I may, because of doubling and tripling, get your last 2 letters incorrect. Please, send last 2 letters once.

If I didn’t get you, be patient as I will call for a new list later.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO. (does not have to be a Ten Tec radio)

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

Thank goodness, Spring is coming!

Bob, I see some other errors also. Besides your call being incorrect, so is Mike's call (he is W3TS, not N3TS). Also, K8GH and K8QH are listed for Dave in MI.

Some of the other callsigns are listed twice. How many people have checked into the CW net?

Ron, I need an accurate number of checkins, so I can complete the data base. Thank you.

Bob, I see some other errors also. Besides your call being incorrect, so is Mike's call (he is W3TS, not N3TS). Also, K8GH and K8QH are listed for Dave in MI.

I corrected K8QH is call. W3TS is not in last night’s log.
Again, I had incorrectly pasted partial of last week’s log with this week’s log.

Again, the only correction is K8QH and K4TAX.

I have taken the precaution of resending their calls to allow for any corrections.
Especially during band conditions like last night. Some have made the effort to correct me and that’s fine.
If there is no issue, I presume I copied correct.

Again, we have varying band conditions from week to week. It is important to make sure I copy your call correctly.
This is why I return with the call and go into the exchange. After the exchange, resend your call if I get it wrong.
I will add this step in the “review” mailings.

I will resend the list again in a few moments.

Thanks Ron and John. Yes I found band conditons to be "not so good". I was strugling with a station on sideband that kept chopping the CW elements. Thus it wold be easy to miss an element and make a 4 a 3. I obviously missed the return call and thus didn't here it in error.

Thanks for all you fellows do.

# 2101. TEN-TEC Demo at Jersey Shore Amateur Radio Society Toms River NJ

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-08 01:22:49 UTC
From: <n2kpc@...>
Topic: 2101  Message: 2101

My Wife, Gaye KB2YOA and myself will be at the JSARS Jersey Shore Amateur Radio Society in Toms River, NJ Thursday 5-8-2014 no later than 7:00PM for their monthly meeting with the TEN-TEC Eagle, Omni 7 and the Rebel if you would like to see them and try the radios on the air if your in the area.
Welcome to the Jersey Shore Amateur Radio Society
JSARS, The Jersey Shore Amateur Radio Society, has been serving the Jersey Shore amateur radio community for over 35 years! With the largest membership http://www.jsars.org/?q=node/11, nightly Traffic Net http://www.jsars.org/?q=node/2, monthly V.E. Test http://www.jsars.org/?q=node/15 Sessions, and the best attended events the club is a friend to the local ham, their family, and the community. We have gatherings each Thursday (except holidays), around 5 pm. at Riverwood Park http://www.jsars.org/?q=node/8, Toms River, there is always something going on! Second Thursday of the month is the clubs Business Meeting, with the Third Thursday being the Test session. The club and its activities are supported by the members http://www.jsars.org/?q=node/12. From our two yearly Ham Fests, radio support events, Field Day weekend, and Holiday Party, the memories are numerous. There is something for everyone, come by and check us out or give a call on one of the club sponsored repeaters http://www.jsars.org/?q=node/3. Remember there is no club with out you. This is your club, come and make a difference
Directions Riverwood Park
Riverwood Recreation Building 2
Riverwood Drive & Whiteville Road
Toms River, NJ 08755
732 349 4466
From Rt. 70 West Bound: Take Rt. 70 west to Rt. 527 (Whitesville Road) There is an Rite Aid Pharmacy on the far left corner and an Exxon on the near right corner. Make the left onto Whitesville Road. Head south on Whitesville Road until you come to Riverwood Drive make right on to Riverwood Drive. There is a small Church on far right side of the intersection. The shoulder of the road also narrows at Riverwood Drive.
From the Garden State Parkway Heading South: Exit at Exit 88 for Route 70 West and follow the directions above.
From the Garden State Parkway Heading North: Exit at Exit 83 for Route 9 North and follow the directions below.
From Points South on Rt. 9 (Toms River): Heading North on Rt. 9, after Nicholas Pools on your left, look for the Ocean County Business Park on your right. Riverwood Drive will be the next left. There is a 2-story house with an enclosed porch at the corner of Riverwood Drive. Turn Left onto Riverwood Drive. Follow Riverwood Drive across Whitesville Road. The Hamfest at the Recreation Center on the left, before the white sports enclosure.
From Points North on Rt. 9 (Lakewood): Crossover Rt. 70, pass Hecht Trailers on your left, and the One Stop Career Center on the left. Look for a 2-story house with an enclosed porch at the corner of Riverwood Drive. Turn right onto Riverwood Drive. Follow Riverwood Drive across Whitesville Road. The Hamfest is at the Recreation Center on the left, before the white sports enclosure.

Our Location http://www.jsars.org/?q=gmaplocation

146.910 PL-3A (127.3 Hz) W2DOR/R Toms River, NJ

Hope to C U there.

1-7) compared to the previous seven days, with average daily sunspot
number rising from 73.4 to 118.4, and average daily solar flux up 13
to 135.6. The most active geomagnetic days were May 4-5, with
planetary A index at a relatively moderate 16 and 10, mid-latitude A
indices of 15 and 11, and the high latitude college A index
(measured at Fairbanks, Alaska) at 25 and 10.

Since then, we saw another active day yesterday (May 8) when the
planetary A index reached 20, mid-latitude A index was 13, and
Alaska's college A index (from Fairbanks) was 41, a high number.

Predicted solar flux for the near term is 145 on May 9-10, 150 on
May 11, 155 on May 12-13, then 160, 165, 150, 140 and 135 on May
14-18, 130 on May 19-20, 125 on May 21, 120 on May 22-26, 115 on May
27-29, 120 on May 30, and 125 on May 31 through June 4.

The near term peak of 184 on June 9 disappeared from the daily
45-day outlook on May 5. The predicted solar flux for that date was
155 in the April 25-27 forecasts, jumped to 184 from April 28
through May 4, and was down to 131 in the May 5-8 forecasts. You can
track the predictions yourself, which are updated daily after 2100Z
at http://www.swpc.noaa.gov/ftpmenu/forecasts/45DF.html
http://www.swpc.noaa.gov/ftpmenu/forecasts/45DF.html.

Currently we see a solar flux peak at 165 on May 15 and 184 on June 16. We see a minimum flux value (via the 45-day forecast) of 115 on May 27-29.

Predicted planetary A index is 8, 12, 10, 8, 5, 10 and 8 on May 9-15, 5 on May 16-20, then 10 and 8 on May 21-22, 5 on May 23-30, then 8 on May 31 through June 1, 12 on June 2, 8 on June 3-4, and 12 on June 5-6.

At 0538Z on May 8 the Australian Space Forecast Centre issued a geomagnetic warning. Increased geomagnetic activity was expected for the rest of May 8 due to a coronal mass ejection. This was the source of the high geomagnetic indices on that date.

Currently a mess of new sunspot groups is appearing around our Sun's eastern horizon. This is good news for HF propagation. You can track the progress of emerging sunspots at http://stereo.gsfc.nasa.gov/
http://stereo.gsfc.nasa.gov/
which currently has an odd view with the earth-facing area of the Sun in black. Apparently data from the Solar Dynamics Observatory is temporarily offline.

Conditions are good right now for HF propagation, especially when compared to earlier points in the weak current solar cycle. We appear to be at a second or third peak in Cycle 24 activity, and we really have no certainty as to how long this will last. Hope for the best!

F.K. Janda, OK1HH predicts active to disturbed conditions May 9-10, quiet to active May 11, mostly quiet May 12, quiet to unsettled May 13-15, quiet to active May 16, quiet May 17-18, mostly quiet May 19, quiet to active May 20-21, mostly quiet May 22-26, quiet to active May 27-28, mostly quiet May 29, quiet to unsettled May 30, active to disturbed May 31 through June 1, quiet June 2-3, and active to disturbed on June 4.

We heard from Jeff, N8II in West Virginia this week. He wrote, "A couple of weeks ago we had several morning openings to Thailand and Malaysia around 1400-1500Z with good signals. I worked the 9W2 beginner's license prefix for the first time. Yesterday, Daud, now with new call YB0IBM (ex YB8DX) was about 5 dB over S9 on 15M phone at 1540Z, so that opening is still good from around 1330-1600Z most days. Western and southern Africa has been workable even on 10 meters until 2400Z many days. The numerous solar flares have caused quite a few days with very poor propagation to Europe and Asia above 17 meters.

"Last weekend, I worked the 7th Call Area QSO Party and broke the QRP mixed out of state record by 77 percent with 606 QSOs, so needless to say conditions were quite good. 15 was the best band for propagation to all of 7 land most of the daylight hours opening well by 1440Z and open well to N9RV in Missoula, MT by 1330Z. My QSO total on 15 was about 215 with many multipliers (counties) found

there. I kept checking 10 off and on all day and finally it opened extremely well around 2315Z until at least 0040Z with signals getting weaker around 0020Z.

"All of 7-land was loud with the first QSO being NK7U in Baker, OR peaking at 20 dB over S9. I made 48 QSOs on 10 which could have been many more with better activity. My guess is the opening was primarily F2, but there was some Es at that time also. The fact that signals from all parts of 7-land were loud at the same time and there was not rapid QSB leads me to suspect F2 over Es. There were many mobiles and expeditions operating from rare remote counties especially in ID, but I missed several counties in WA, OR, AZ, and NV (much better turnout in NV than usual including W1AW/7 in 3 counties). Even 40 and 80 were very good (NK7U over S9 on 80), but with limited activity. 20 was the band with the most activity, but absorption was high from here from 1520-2200Z. 20 was open until past 0300Z which is 11 PM here.

"The Florida QSO Party the weekend before featured very, very weak backscatter on Sunday to FL on 15 with many western USA and EU/West Asia having good prop to FL for many hours with UA9FAR S-9 off the back of my Yagi. 20M was marginal to the panhandle of FL at times and 40 never really opened from here Sunday, but I missed the 8AM start by about 2 hours."

Interesting article about the history of Sunspot, New Mexico can be found at,
http://www.alamogordonews.com/alamogordo-news/ci_25692642/sunspot-circa-1957-finest-solar-research-laboratory-world http://www.alamogordonews.com/alamogordo-news/ci_25692642/sunspot-circa-1957-finest-solar-research-laboratory-world
.

Scott Bidstrup, TI3/W7RI in Costa Rica wrote on May 6, "The propagation on 6 meters has been fabulous down here for about a month - up until about a week ago, when activity on 6 meters has fallen off a cliff.

"It began with Phil, TI5/N5BEK here in Costa Rica working Japan on long path, via a chordal duct (aiming his beam just south of due east), and Remi, FK8CP, being audible here in Central America in the early evening hours, almost daily, sometimes for hours at a stretch, and often with S9+20 signal levels.

"But beginning about a week ago, with the dip in solar activity, there's been almost nothing but a few weak sporadic E openings into the Leeward Islands. Looking at the 6 meter DX map from http://www.dxmaps.com, http://www.dxmaps.com,/we can often see a mass of QSO lines going directly over our heads via TEP, but for us on the ground, tuning around the 6 meter band has yields no signals at all, no matter where the antennas are pointed. It's been frustrating to say the least.

"With sporadic-E activity in the States picking up, we're hoping for the best, though sporadic-E openings down here tend to be rather uncommon. When they happen, they're usually into Florida, the Gulf Coast and occasionally Texas. So you fellas up there, especially along the Gulf Coast, check the beacons down here often during the sporadic-E season. Never know when you might work some Central American DX."

Scott also noted that we often see more solar flares on the downside of the solar cycle, after the peak, as mentioned in this article he sent along:

http://www2.ucar.edu/atmosnews/features/11505/watch-solar-superstorms
http://www2.ucar.edu/atmosnews/features/11505/watch-solar-superstorms

Scott sent this article on sprites, and wonders "Since this phenomenon occurs in the D-region of the ionosphere, and the ion density is high enough to be luminous, I am curious to know if this phenomenon could support propagation in the VHF, UHF, or possibly lower microwave regions (short enough wavelength to be well out of the absorption region), if for only for a second or two. It would be interesting to do some experiments to find out."

The article can be found at,
http://phys.org/news/2014-05-sprites-plasma-irregularities-ionosphere.html
http://phys.org/news/2014-05-sprites-plasma-irregularities-ionosphere.html

Scott also has a web site devoted to propagation:

http://www.bidstrup.com/w7ri-hf-radio-propagation.htm
http://www.bidstrup.com/w7ri-hf-radio-propagation.htm

Jim Henderson, KF7E of Queen Creek, Arizona wrote, "There is a great tool for visualizing CMEs in 3-D available at
http://www.swpc.noaa.gov/wsa-enlil/ http://www.swpc.noaa.gov/wsa-enlil/.

"It is still in development, and I find the estimate of 'time of arrival' at Earth to vary widely in accuracy, but it is getting better."

Note that ARRL Field Day is seven weeks away, on June 28-29.

Also, K6TU is offering free propagation forecasts for the WRTC event:

https://k6tu.net/?q=node/add/dx-prediction-wrtc
https://k6tu.net/?q=node/add/dx-prediction-wrtc

http://www.wrtc2014.org/k6tu-provides-propagation-forecast-service-for-wrtc2014/
http://www.wrtc2014.org/k6tu-provides-propagation-forecast-service-for-wrtc2014/

Sorry to hear of the passing of Lee Wical, KH6BZF. Lee occasionally filled in for me over the past two decades when I was out of town, when I couldn't write the bulletin. He was quite knowledgeable about

propagation, and always entertaining. Lee will be missed!

If you would like to make a comment or have a tip for our readers, email the author at, k7ra@arrl.net. mailto:k7ra@arrl.net.

For more information concerning radio propagation, see the ARRL Technical Information Service web page at, http://arrl.org/propagation-of-rf-signals. http://arrl.org/propagation-of-rf-signals.For an explanation of the numbers used in this bulletin, see http://arrl.org/the-sun-the-earth-the-ionosphere. http://arrl.org/the-sun-the-earth-the-ionosphere.An archive of past propagation bulletins is at http://arrl.org/w1aw-bulletins-archive-propagation. http://arrl.org/w1aw-bulletins-archive-propagation.More good information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL bulletins are at http://arrl.org/bulletins.

Sunspot numbers for May 1 through 7 were 93, 114, 121, 128, 131, 137, and 105, with a mean of 118.4. 10.7 cm flux was 125.7, 135.4, 132.6, 131.5, 139, 138.9, and 145.9, with a mean of 135.6. Estimated planetary A indices were 6, 3, 7, 16, 10, 3, and 4, with a mean of 7. Estimated mid-latitude A indices were 5, 3, 5, 15, 11, 4, and 5, with a mean of 6.9.

John
Just check the data base did not check in to 40 net 4Watts QRP to much noise heard you great Thanks for all the people who relay for me My wife's mother 91 yrs old not doing well Just learn she has cancer .Looks like be in Fl
for a while Too darn hot . Need my Ga mountains HI HI

Thanks for everything you do for the nets

God bless

From: k3ur@...
Topic: 2106  Message: 2108

Ray, thank you for your honesty. I received an email from Lloyd N2KPC, telling me that you checked into the 40 meter net with him, after I turned the remainder of the net over to him, as I was preparing to start the 20 meter net.

Lloyd even stated that you were QRP, running just 1 watt with an FT-817 radio. Obviously Lloyd heard you, as he has an excellent directional beam for 40 meters and New Jersey to Florida is usually an easy shot.

We will be praying for your dear mom. Tell her that we all wish her a Happy and Blessed Mothers Day! Thank you for your faithful support of the TEN-TEC nets. God bless you and your family.

John, K3UR

# 2109. TEN-TEC NETSv Today Sunday 5-11-2014

C U There,

10 meter SSB net, Sunday 1PM Eastern Time on 28.440. Lloyd N2KPC, Net
Primary Backup Net Control will be: Andy W3LI in PA.
Secondary Backup Net Control will be: Mike W3TS in PA.

40 meter SSB net, Sunday 1:30PM Eastern Time on 7.263. John K3UR, Net
Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Secondary Backup Net Control will be: Ted N8TJE in OH.

20 metet SSB net, Sunday 3PM Eastern Time on 14.325. John K3UR, Net Control.
Primary Backup Net Control will be: Lloyd N2KPC in NJ.
Seconday Backup Net Control will be: Tony VE3DWI in Canada.

40 meter CW net, Monday 7:30PM Eastern Time on 7.063. Ron WBIHGA, Net
Control.
Primary Backup Net Control will be: Roger KI8DU in WV.

Remember K3UR John's Wed. Net is cancelled for this week.

73,
Lloyd N2KPC

# 2110. TEN-TEC Nets Today Sunday 5-11-2014 SFI 154

# 2112. TEN-TEC 10 Meter SSB Net had 29 check ins today Sunday 5-11-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-12 03:53:39 UTC
From: n2kpc@...
Topic: 2112  Message: 2112

We had 29 check ins NJ-6, GA-3, PA-2, TN-2, CN-2, SC-2, NC-1, VA-1, NY-1, KY-1, LA-1, MS-1, KS-1, TX-1, MA-1, AL-1, FL-1, BARBADOS-1.

The SFI made it to 164 and that helped a lot, but the band was in and out quickly.
I asked several Hams to call and relay for check ins and that made the net.
Thank You to each of you for a positive try.
Several Hams where on the edge of propagation and dropped out quickly.
Hope to C U at Dayton at the TEN-TEC Booths, I will be there Fri. Sat. and Sunday.
May God Bless you with a safe trip to and from Dayton because some are driving two or three days to get there one way.
Thank you for repeating due to a near by station and the band dropping out in the middle of you giving
your info to me and those in the TEN-TEC Net who took the time to help each other out.
You make the Net Controls and the TEN-TEC Family proud.
Remember that when the bands are tough and know that we all don't hear the same station the same way.
You all did a great job and it showed by the emails that I got from a couple of new Hams today and tonight.
They will be back and said so, they are our replacements in the future you know. I know nobody's happy when
they can't make it in because of propagation, but we try our hardest to get you.
If not, don't give up the ship, we will be there trying next time to check you in.

73,
Lloyd N2KPC NCS, RNCS and John PR guy, Why?, because we like you, a quote by Mickey Mouse
,-,-,-

# 2114. Fwd: [TenTec] Alpha Amplifiers and TEN-TEC Merge

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-12 16:03:45 UTC
From: John Occhipinti
Topic: 2114  Message: 2114

I am forwarding a very important announcement, a merger between RF Concepts LLC/Alpha Amplifiers and TEN-TEC Inc.

Also, TEN-TEC will unveil their new radio, the Patriot at the Dayton Hamvention this weekend.

ALPHA AMPLIFIERS AND TEN-TEC MERGE UNDER RF CONCEPTS BANNER

LONGMONT, Colo.- May 9, 2014 - Announcing today the merger of Longmont, Colorado -based RF Concepts LLC / Alpha Amplifiers and Sevierville, Tenn.-based TEN-TEC Inc., RF Concepts Chairman Michael Seedman, AA6DY, declared the union the perfect combination of amateur radio brands. The merger creates a multi-million-dollar company with products that span QRP transceivers to full-legal-limit amplifiers and establishes an organization with the size and scale to continue to innovate into the next decade and beyond.

RF Concepts/Alpha Amplifiers has been building amplifiers continuously since the early 1970s and has put more than 13,000 amplifiers in the hands of demanding amateur radio operators. Alpha Amplifiers are considered "the finest line of linear amplifiers in the world" by the ham community. TEN-TEC, founded in 1968, produces top-of-the-line receivers, transceivers, amplifiers and tuners and is known worldwide for the reliability and performance of its products.

"For more than 40 years, Alpha Amplifiers and TEN-TEC have shared a reputation in the amateur radio market for offering exceptionally well-engineered, American-made products backed by extraordinary customer service," said Seedman. "Alpha Amplifiers is known for 'key down performance,' and TEN-TEC is known for pushing the boundaries of transceiver performance and capabilities.

"The merger of these brands under the RF Concepts banner makes perfect sense," added Seedman, "not only in terms of creating a powerful product line, but also in terms of positioning our company for the future. This merger more than doubles the size of our business allowing us to invest more capital in innovative engineering and customer-driven product development."

RF Concepts' operations will now be shared between its Longmont Colorado facility and its Sevierville Tennessee facility. The company is currently seeking a new operations facility in the Sevierville area to more efficiently house factory operations, part of the engineering resources, and technical and customer support services. The Colorado facility will house engineering resources, technical and customer support services, and much of the front-office operations.

Both Jim Wharton, NO4A, who in January of this year took the reins of TEN-TEC upon the retirement of founder Jack Burchfield, K4JU and Ken Long, N0QO, who has been overseeing the operations at Alpha Amplifiers will be Presidents of their respective group, working together to build a strong, innovative company.

"Ken and I have spent quite a bit of time discussing our short- and long-term focus over the last few weeks and I feel our responsibilities are very clearly defined.", said Wharton.

"Jim and I have a lot of work to do to make sure the merging of these two brands goes as smoothly as possible." added Long.

The merger announcement comes just days before one of the signature amateur radio events in North America-the Dayton (Ohio) Hamvention-where more than 75,000 hams are expected to converge on the Hara Arena Complex to discover the latest innovations in amateur radio. Both Alpha Amplifiers and TEN-TEC will operate separate booths at this years show (May 16 - 18). Both booths will feature new products and special offers to commemorate the merger. At booths 209-210 in the North Hall, Alpha Amplifiers will be demonstrating the soon-to-be released DreamTuner 4040 Automatic Antenna Tuner, a graphically based, 4KW Autotuner. At booths 458-450 in the East Hall, TEN-TEC will unveil the Patriot, an open source, arduino-based SSB transceiver.

About RF Concepts/Alpha Amplifiers

RF Concepts/Alpha Amplifiers manufactures high-end linear amplifiers for ham radio enthusiasts. Based in Longmont, Colo., the company is known worldwide for its quality amplifiers. Alpha Amplifiers have been continuously manufactured in the United States since the early 1970s.

About TEN-TEC

TEN-TEC Inc. was founded in 1968 to provide beautifully engineered, well-crafted, well-supported and high-performing products to the amateur radio market. For 46 years the Sevierville, Tenn.-based company has passionately designed, crafted and tested premium products which have earned the company a solid reputation and loyal brand followers throughout the world.

# 2118. CW Net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-12 21:19:56 UTC
From: ron
Topic: 871  Message: 2118

Ten Tec CW net every Monday night on 7063 +/- 7:30 Eastern Time.

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AS (sent together) means STANDBY.

When do I ck in?

After u hear QNI, send the last two letters of ur call. This gives others a chance to sign in, and reduces interference. I may, because of doubling and tripling, get your last 2 letters incorrect. Please, send ur call once.

If I didn’t get you, be patient as I will call for a new list later.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

Because band conditions may change, please take extra care to ensure I

have your call correct.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

Thank goodness, Spring is coming!

TEN-TEC brands will continue on for many many years to come.
Alpha brands will continue on for many many years to come.
This is a great merger of two great companies that have been in the amateur business for 40+ years each individually.
Still continuing on their own brands in the amateur market and also in the commercial market.
Combining strengths to be even stronger.
Technologies and experience that TEN-TEC has Alpha can now leverage.
Technologies and experience that Alpha has TEN-TEC can now leverage.
We now have a larger and more experience software staff than before, think of what can be imagined and made reality then.
Combining the RF and electrical teams, wow.

Can't really comment more.
You all now know the big announcement, well, actually both of them.
The merger, and the new 507. I'm sure there are other things that will follow suit.
Of course, yes, takes some time to merge the working groups. But it definitely won't take two years, I see new products from this venture out much much quicker than that.

ok, back to work, software to write, projects to continue, etc.
As you can tell, really busy, so may not be able to answer on here much until after Dayton.

I'm excited.

Thanks, and 73,
John Henry, KI4JPL

I think the partnership between RF Concepts and Ten-Tec will create a force in Amateur Radio hard to beat. We already know that Ten-Tec makes the finest transceivers in the world and now with this new partnership with Alpha Amplifiers also considered to be the best HF amplifiers in the world I think the foreign amateur makers just became very nervous. I am very proud to own Ten-Tec products and am so excited to see another American company join forces. There is no doubt in my mind that this announcement is going to shake up the amateur market and to all those people that we have all heard on the air that thought Ten-Tec was going out of business wait till they hear about this!

Thank you Ten-Tec, RF Concepts and all of the members of the Ten-Tec, Net today's announcement makes me proud to be a amateur operator and an American.

If you are going to Dayton Please stop by and say hello.
I will be there Fri. Sat. and Sunday at the TEN-TEC Booths 458-450 in the East Hall,
TEN-TEC will unveil the Patriot, an open source, arduino-based SSB transceiver.

May God keep you safe on your trip.

Looking forward to meeting the TEN-TEC Family at Dayton and if you can't make it there God willing and the creeks don't rise we will see you at the TEN-TEC Hamfest 2015 which my Wife and I would rather be at than Dayton because of You, that's right, You who are reading this because you give a hoot and so do we.
If you come to Dayton, Bring your camera.
73,
Lloyd N2KPC

Check out the new 507 Patriot at Dayton and join the yahoo group
Richy N2ZD has set up a group for this new rig.
I'm including his announcement text he used for other groups below:
---
Check out the new Yahoo group!! The 507 is being unveiled in Dayton and just like its Brother the 506, this bad boy is fully modifiable and it has voice on 40m and 20m!!

Simply search for the TenTec507Patriot and join... As always, include your call or some other way we can identify you as an enthusiast and human... Thanks, Richy N2ZD

---

It has all of the info we want to make public as of now. More info to come and will be posted in that group.

Thanks and 73,
John Henry, KI4JPL

# 2135. Having Fun with an Eagle

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-16 20:24:31 UTC
From: tvman1954@...
Topic: 2135  Message: 2135

Hello Friends,
Bob/K4TAX, has sent me his Ten Tec Eagle to run for 2 or 3 weeks. This is the same Eagle which he Beta Tested. It now has all the latest updates, filters, noise blanker and internal tuner installed. When the Eagle landed ... we were all smiles. There will most likely be tears in my eyes when I must give it back! So, .. I can no longer say that we have never played with a newer Ten Tec Rig. The Receiver is Absolutely Awesome! Great On the Air signal reports..... We just can't wait for the Ten Tec Net. The Paragon 585 still has a home for Life but, Wow! this Eagle pulls signals out of the Ether as if by Magic..... And surprisingly, for the group I talk with, nobody has found the first unkind word to say about the Transmitter..... Wow!

From: ron
Topic: 2139  Message: 2139

Ten Tec CW net every Monday night on 7063 +/- 0030 Z (7:30 Eastern Time).

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to me stations I cannot hear)

AS (sent together) means STANDBY.

When do I ck in?

After u hear QNI, and only then; send the last two letters of ur call. NCS will acknowledge by repeating ur last two letters of your call followed by: “AS” This means STANDBY. Because there is chance of doubling, tripling please space out to reduce interference and give everyone a chance to sign in (and me to copy). NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

Please send your call again when finished to ensure I have ur call correct. Propagation can vary week to week. It can be enough to get it wrong.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call; I send ur call, QNB K. You then proceed to contact that station, gather info. When completed, you again send QNB followed by ur call. I send ur call followed by K. You then proceed to relay that info.

Following the above suggestions will help us run a smooth net. Have a good week.

72 Ron, wb1hga TT CW NCS

Hi Wade,

Well, if the Eagle is any near the Argonaut VI, it is a super rig! I've never had the opportunity to use an Eagle but must admit, I love my Argonaut VI and matching 418 amplifier. I've got the AM and CW filters in my Argo VI. This combo I think runs closely just behind my Orion II in performance.

When you have to return the Eagle, give the Argo VI a shot. It's a super rig!

# 2150. Orion II aux audio output

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-20 11:08:13 UTC
From: Mark Erbaugh
Topic: 2150  Message: 2150

I just purchased a used Orion II. I had assumed that like the Orion (I), the main and sub receiver audio would be available on separate pins of the AUX jack, but reviewing the manual and online comments, it appears not to be the case. It looks like audio is only available on one pin, even though there are several pins labelled unused and that the source of that audio is by menu selection.

Does anyone know why it was done that way? Are there any mods to bring out separate main and sub receiver audio signals? I was planning on feeding the separate signals to left and right audio inputs on my computer to have two waterfall displays, one for the dx station, one for the pileup.

73,
Mark

# 2151. The Eagle is Flying High!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-20 17:15:14 UTC
From: tvman1954@...
Topic: 2151  Message: 2151

A few days back, we were lucky enough to get a package in the mail from Bob/K4TAX. Since I had never been able to operate a Ten Tec, made in this Century. Bob was generous enough to send his Mint, Pre Production Ten Tec Eagle to us for about Three Weeks. I believe that this is the one he beta tested before they were released to the public. The manual says that it's Birthday is July 2010. Or maybe that is when the manual was printed? All I can say is Wow! Just like the Corsair of Legend, this radio has the Quietest Receiver, since the Corsair, maybe better. My friend has an Omni VI option 3 that we thought was Great. The Eagle Receiver seems to beat the pants off of it also. And it may be Quieter. If, you run the RF Gain back to about the 12 o'clock position and advance the AF Gain a bit. You really don't hear much until somebody speaks. And you don't need to run the RF Gain back to have a Very Quiet Receiver. The Auto Notch feature takes a couple of seconds to engage but, when it does..... Wow... Where did that offending 20 over 9.. Tuner Upper Go? With full filter complement, the really cool thing is that these filters are engaged automatically when you turn the Bandwidth Control. When we turned the radio on and made the first contact, I was told that it sounds Great on the Air. So, if it ain't broke, I don't want to adjust on it until it is !!! We haven't made any CW contacts yet but, the CW Receive is Impressive also. We have twisted and adjusted most everything on the receiver. So far there are Three things that we don't like about it.

1. It is not mine.
2. The Phone Jack is either Speaker or Headphone. My Paragon will play both when the jack is partially plugged in. An easy work around. Makes for diversity in hearing.
3. And last and also Least .... my friend calls it a Tater TOT Radio. With no Orange Dot between the Iconic Ten Tec T's it does look like the word? ...TOT.

The Transmitter with the Model 709a Microphone seems to cause folks to send back Great Audio Reports. With the Auto Tuner, we are having Lots more fun with the 5btv Vertical. ( My first Auto Tuner ) If we find anything of importance lacking with the Eagle. I will report back promptly. For now we just hope no tears come to our eyes when we are due to return it to Bob. The Paragon is getting a much needed tune up. DeOxit and Connectors/Connections cleaned up. Maybe, 10 to 15 years from now, when they reach my Price Range. I will be able to stand one on it's back and with a small artists brush, fill that O between the T's with a small dab of Tennessee Orange Paint.....

Maybe 200 per hour.

Space Weather News for May 23, 2014
http://spaceweather.com http://spaceweather.com/

METEOR ALERT: This weekend, Earth will pass through a stream of debris from Comet 209P/LINEAR. If forecasters are correct, the encounter could produce an outburst of bright meteors numbering more than 200 per hour. Most models agree that peak rates should occur between the hours of 0600 UT and 0800 UT (2 a.m. and 4 a.m. EDT) on Saturday morning, May 24th, a time frame that favors observers in North America. It is worth noting, however, that Earth has never encountered this stream of debris before, so forecasters cannot be certain of their predictions. The display could be a complete dud, a fantastic "meteor storm," or anything in between. Visit http://spaceweather.com http://spaceweather.com/for full coverage.

73,
Lloyd N2KPC

# 2166. Good reason to have a TEN-TEC Radio Solar Storm happening

# 2167. MEMORIAL DAY SPECIAL EVENT NET

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-24 14:09:16 UTC
From: John Occhipinti
Topic: 2167  Message: 2167

The Memorial Day Special Event Net is being announced simply as the Memorial Day Special Event Net. We will try not to mention that this is a TEN-TEC NET, as this net is open to all Amateur Radio Operators.

We want to stress the importance of the day, which is to remember and honor all men and women who died while serving in the United States Armed Forces.

I will be hosting this Special Event Net on Monday May 26, Memorial Day
starting around 2:00 PM Eastern Time on 14.325. Everyone who checks into this net will receive TRIPLE (3) checkin credits.

I will be looking for stations to assist with relays, as I may not hear stations in the surrounding states, as I am located in the Metro Atlanta Area.

Thanks to all who support the TEN-TEC Nets and a special thanks to everyone who will be remembering and honoring all men and women who died while serving in the United States Armed Forces.

John, K3UR

Happy Memorial Day and God Bless our Troops Past, Present and Future.

https://www.google.com/imgres?imgurl=http%3A%2F%2Fwww.yourwdwstore.net%2Fassets%2Fimages%2Fpins%2F2011pins%2F05may%2F400002518129.jpg&imgrefurl=http%3A%2F%2Fwww.yourwdwstore.net%2FDisney-Mickey-Mouse-Pin--Mickey-Mouse-with-American-Flag_p_14005.html&docid=iB3DNhBshczfiM&tbnid=BydZgK2HM0HBYM&w=340&h=340&ei=jaqAU_jKOKvJsQSmwYKgCg&ved=0CAYQxiAwBA&iact=c

The 3 TEN-TEC nets will resume this Sunday May 25th, also the Monday night CW net and the Wednesday afternoon SSB net. Everyone that checks into these 5 nets will receive DOUBLE (2) checkin credits from John K3UR.

The Special Announcement is that John K3UR will be hosting a Memorial Day Special Event net on Monday May 26th at 2PM Eastern Time on 14.325.

Everyone that checks into this Memorial Day Special Event Net will receive TRIPLE (3) checkin credits from John K3UR

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

73,
Lloyd N2KPC NCS RNCS

Lloyd, thank you for posting the beautiful pictures honoring our troops, our flag and our country. We have so much to be thankful for. We are looking forward to a wonderful Memorial Day Special Event Net, starting at 2:00 PM Eastern Time Monday on 14.325.

This Special Event net will be different than any other net on the Amateur Radio Bands, as we will be honoring all of the men and women that died while serving our country. I am inviting those that have personal stories to share about their loved ones who served and died in order that we might have liberty today.

Also, everyone checking into this Memorial Day Special Event Net will receive TRIPLE (3) checkin credits toward their Certificate totals. May God bless America and comfort those who lost loved ones in the military.

John, K3UR

We thought we'd share this with you all.

God Bless to ALL soldiers who fight for Justice and World Piece.

73,

Tony VE3DWI
Marianne VE3MXT.

Live life to the fullest until it's not worth living

Help For Heroes

Keep this going; only takes 30 seconds

It proves they are BIG softies really.

Whatever you do just keep this going please!!!

It is always good to see pictures like these.

Proof of abuse by our Troops.

Armed Troops Force Afghans to Seesaw Until They Talk!

Afghan Child Bites Soldier In Self Defence After Obvious Torture!

Soldier overheard to say 'Talk or I'll tickle you till you pee!'

More Evidence Of Failed Intelligence Policy.

Soldier Attempts to Eat Afghan Child!

Clear Evidence of Forced Labour by Troops!

Soldier Caught At 'Tickle-Torture' To Extract Intelligence!

Soldier forces child to hang by fingertips!

No comment here. There's nothing funny about this one.

May the good Lord bless every one of our troops wherever they are!

PLEASE KEEP THIS GOING -

EVEN IF YOU HAVE PASSED IT ON BEFORE!!

Prayer wheel for our Armed Forces,

Please don't break it .

Roger, as most of us know, the 5 weekly TEN-TEC nets are listed on several different places, which include the ten_tec_radio_net, the TEN-TEC Website and on my QRZ page.

If anyone needs to improve their CW skills, they are free to get together for a practice session anytime they feel is needed.

In order to avoid any confusion, it should not be called a TEN-TEC CW net.

# 2226. TEN-TEC Nets Tomorrow Sunday June 1, 2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-05-31 12:20:17 UTC
From: n2kpc@...
Topic: 2226  Message: 2226

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

# 2246. Orion 2 questions

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-04 04:27:43 UTC
From: Mark Erbaugh
Topic: 2246  Message: 2246

I just received an Orion 2. The serial number ends in 5, so I'm guessing it's an early production run. What issues should I be looking for with a unit this old? It seems to work okay.

The unit came with the 1.8 kHz and 600 Hz optional filters. I added a ner 300 Hz filter. All the filters, except the 600 have cases. The 600 is just 4 crystals on a PC board. Is that the optional filter from the factory?

The power output setting tracks pretty well with what the 238C reads, but the O2 meter reads high. - 25 watts reads as 50, 50 reads as 75. Is that normal? can the meter be calibrated? I did find instructions online for calibration the S meter indication.

73,
Mark

The Argo 6 filters do not have a case. It is either one of those, or an INRAD filter.

I just received an Orion 2. The serial number ends in 5, so I'm guessing it's an early production run. What issues should I be looking for with a unit this old? It seems to work okay.

The unit came with the 1.8 kHz and 600 Hz optional filters. I added a ner 300 Hz filter. All the filters, except the 600 have cases. The 600 is just 4 crystals on a PC board. Is that the optional filter from the factory?

The power output setting tracks pretty well with what the 238C reads, but the O2 meter reads high. - 25 watts reads as 50, 50 reads as 75. Is that normal? can the meter be calibrated? I did find instructions online for calibration the S meter indication.

Are there any markings that might help me identify it? I plan on feeding some broadband noise to the radio and see if I can figure out the pass and. With 4 crystals, I assume it is 4 pole.

# 2255. 2006 Total check ins a new Milestone

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-05 05:17:43 UTC
From: n2kpc@...
Topic: 2255  Message: 2255

You Did it TEN-TEC Family, YOU set a new milestone this week.
Take a Bow.
As of 6-4-2014 2006 Total check ins.
Thank You TEN-TEC President Jim Wharton, John Henry (Ten-Tec Software Engineer), and Stan Brock (Ten-Tec Sales/Marketing), K3UR, John, KC2QMA, John, WB2HGA, Ron, ON4LDL, Bob and Backup Net Controls and all of you who check in and support the TEN-TEC Family.
Thank You to my Wife Gaye, KB2YOA for her great support the TEN-TEC Nets and TEN-TEC and me.
Gaye has 160 check'ins now to the TEN-TEC Nets, hard to do thru her busy schedule.
She spreads the word like me to all the Hams we meet about TEN-TEC and the TEN-TEC Nets too.
Thank You God for watching over The TEN-TEC Family.
Amen.
73,
Lloyd N2KPC NCS RNCS PR

I am not ready to start dancing in the streets yet at the 2,000 checkins. I am more concerned about the 1900 people who have not checked back into our nets.

When we look at the number of new people that check in each week,compared to the total number that check in, our retention rate Is very low.

As I can see, we have around 50 faithful people who check into our nets each week. What have we done to cause this and what can we do to improve these numbers?

I am open to suggestions and any criticism that may help us to improve on these numbers. My flack jacket is on, so feel free to respond.

Hi John,
Many people are on the air with fine TEN-TEC Radios and they are just not net people and because of working two jobs, swing shifts like my Wife and Family life can't set a time to be on the air.
Many Hams that I know that have checked in TEN-TEC Nets can't , but would like to do so.
I myself never checked into nets on the weekend because I worked for 14 1/2 years a four day workweek.
I would be surf fishing and working DX on the beach from Thursday night to Sunday Night here in NJ.
Over 200 check ins to all the TEN-TEC Nets this past week is how I look at it,
It is like being a Firefighter, a lot of people check it out, bur only a few are willing to do the hard work and put the time in. I been a Firefight for 41 years and was the first class of EMT's in March 1976 with 40 years in EMS.
The 50 that stay is a higher number than the Firefighters by a 1000 percent.
I rather have 50 who care than 2006 who don't and I think we are very lucky to have the one who care and lookout for one another.
Besides Jim and Stan would suffer a bad case of writers cramps, Hi Hi.

From: John Occhipinti
Topic: 2255  Message: 2261

Tony, thank you for taking the time to respond. I am not discouraged, but I am a realist.

When I was Net Control for the Yaesu FT-2000 net on 20 meters 6 years ago, I had just 2 relay stations, 1 on the West Coast in California and 1 on the East Coast in Massachusetts. Both of them had directional beams and legal limit amplifiers. Both of them stayed with me right to the end of each net.

We would average 250 people checking in every Monday night for 3 years. Some nights we would have over 300 people checking in.

My concern is that you and only a few others remain on the nets after checking in. I know that some have other priorities and must leave.

As you may recall, I was the person who started up the TEC-TEC nets in April 2012, after several years of no TEN-TEC nets. Then 11 months later in March 2013, I was forced into starting our own Group, called the
ten_tec_radio_net Group, because a lot of TEN-TEC users from the other
TEN-TEC reflectors made life very miserable for me and my family, all because they did not want to hear about the Certificate Program.

So, as life goes on, we will continue to remain focused and dedication to TEN-TEC Inc, the TEN-TEC nets and the ten_tec_radio_net Group.

# 2263. Re: [ten_tec_radio_net] 2006 Total check ins a new Milestone

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-05 20:49:46 UTC
From: Bob McGraw - K4TAX
Topic: 2255  Message: 2263

I observe that many of the first time check-ins, each week, do so initially to get the very nice certificate for 25 check ins. The next 25 becomes a bit more difficult and then the 100 seems even more challenging. Thus once they get the "wall paper" they are likely off and running doing other things. Plus Summertime activities and family outings take away from the net times on Sunday. They will likely return when the WX gets to be not suitable for outdoor activities.

I must applaud John K3UR and others that handle the nets and provide relay functions and say they do an excellent job. Other than "checking in" and being acknowledged, there's little other exchanges taking place.

And I too I believe that many "listen" to the net and do not check in. These that listen and those that do check-in represent a fine group and I believe serve to stimulate interest in the Tentec products. After all, this is 4 to 5 hours per week of "free advertising" on the air for the Tentec brand products. And thanks to Jim Wharton and the Tentec staff for their excellent support of these nets.

Fellow hams;

I have been percolating the idea of running a CW net on
Wednesday night 7:30 PM Eastern Time on 14063.

Please note:

This will be temporary tryout. If interest developes,
this may be permanent.

The 40 meter net will continue as always on
Monday nights.

see you at both nets

Ron, you are free to hold additional CW nets, but we are not prepared to expand the TEN-TEC Certificate Program at this time.

Our plate is full and we are in transition along with TEN-TEC Inc. Please concentrate on getting and confirming the correct names and callsigns,before forwarding them for input into the Data Base. Thank you.

Ron,

I will check in when I'm available. With these nice evenings, I'm often out on the bicycle. I'm not sure why John, K3UR doesn't support it. It's okay when he wants to add a Wednesday net during the day, which discriminates agains those of us still working, but not okay when one of the other NCS stations wants to.

73,
Mark

Fellow hams;

I have been percolating the idea of running a CW net on
Wednesday night 7:30 PM Eastern Time on 14063.

Please note:

This will be temporary tryout. If interest developes,
this may be permanent.

The 40 meter net will continue as always on
Monday nights.

see you at both nets

June 6, 2014

RELEASE 14-159

NASA Beams "Hello, World!" Video from Space via Laser

NASA successfully beamed a high-definition video 260 miles from the International Space Station to Earth Thursday using a new laser communications instrument.
Transmission of "Hello, World!" as a video message was the first 175-megabit communication for the Optical Payload for Lasercomm Science (OPALS), a technology demonstration that allows NASA to test methods for communication with future spacecraft using higher bandwidth than radio waves.
"The International Space Station is a test bed for a host of technologies that are helping us increase our knowledge of how we operate in space and enable us to explore even farther into the solar system," said Sam Scimemi, International Space Station division director at NASA Headquarters in Washington. "Using the space station to investigate ways we can improve communication rates with spacecraft beyond low-Earth orbit is another example of how the orbital complex serves as a stepping stone to human deep space exploration."
Optical communication tools like OPALS use focused laser energy to reach data rates between 10 and 1,000 times higher than current space communications, which rely on radio portions of the electromagnetic spectrum.
Because the space station orbits Earth at 17,500 mph, transmitting data from the space station to Earth requires extremely precise targeting. The process can be equated to a person aiming a laser pointer at the end of a human hair 30 feet away and keeping it there while walking.
To achieve this extreme precision during Thursday’s demonstration, OPALS locked onto a laser beacon emitted by the Optical Communications Telescope Laboratory ground station at the Table Mountain Observatory in Wrightwood, California, and began to modulate the beam from its 2.5-watt, 1,550-nanometer laser to transmit the video. The entire transmission lasted 148 seconds and reached a maximum data transmission rate of 50 megabits per second. It took OPALS 3.5 seconds to transmit each copy of the "Hello World!" video message, which would have taken more than 10 minutes using traditional downlink methods.
"It's incredible to see this magnificent beam of light arriving from our tiny payload on the space station," said Matt Abrahamson, OPALS mission manager at NASA's Jet Propulsion Laboratory (JPL) in Pasadena, California. "We look forward to experimenting with OPALS over the coming months in hopes that our findings will lead to optical communications capabilities for future deep space exploration missions."
The OPALS Project Office is based at JPL, where the instrument was built. OPALS arrived to

the space station April 20 aboard SpaceX's Dragon cargo spacecraft and is slated to run for a prime mission of 90 days.

I would hate to see the 40M CW net discontinued. To me the 40M net gives some persons the opportunity to check in when the SSB propagation on 40M and 20M doesn't work well. In other words, CW still works when other modes do not.

Although my activity is limited, largely due to net time being dinner time at our house and I dare not miss dinner or the dog gets it. Often I'll listen to the net via the Omni VII remote capability, which with the latest firmware and software, is quite good. I remote the audio from my computer to my wireless earbud system and can get away with that at the dinner table.

I also perceive that net activity will pick up this Fall and Winter as outdoor activities lessen.

This is true and remember that getting outside is good for us all.
Otherwise you will get Cabin Fever, Just ask Tony, VE3DWI, HiHi.
Cold up there in Canada you know.

K3UR has a full plate every week doing the "paper work " and the math.
It takes many hours to complete all of it and adding more nets means a lot more work and time.

I checked with John, K3UR, to make sure that he could handle the extra work and time before I proposed the Ten Meter Net.

The CW Net is important to do to promote CW and a lot of fun for newbies to CW.
It to will pick up over time, starting in the fall.
The Ten Meter net give new Technicians and DX a chance to check in to the TEN-TEC Nets which otherwise
they could not join the TEN-TEC Family and learn new things and learn about TEN-TEC hands on.
Even if only a few can check in that great too. A little adds up to a lot.
Each checkin is important and when I take the time out of the net to talk to a new Ham so that they feel welcome to a new net, learn what works like which antenna, mike, and most of all give them a direction in which to go to build a better operating system which they can check out on the TEN-TEC nets with no fear.

Just think if you were just starting out or you got some RF getting in to your Radio System by a mike cable
going bad or a ground coming undone and you can hear it on John's, KC2QMA live feed.
No where else can you do that but here on the TEN-TEC Nets and have the help that we give you to fix the
problem with many solutions from Hams that can answer it off of the top of their heads.
It is a big job when you have to work for a living and when you don't to fit it all in.

Ron,

Sorry but I'm coming late to this discussion. I just read and responded to John's comments regarding the 20m net.

I support and appreciate that you are making an effort to expand the CW TenTec nets.

I would be equally frustrated after reading his comments but I would ask you to take the "high road" and keep the 40m net. I enjoy it each week that I can hear the net (40m propagation to Michigan isn't always the best and local QRN doesn't help!) and make an effort to tune in each week at 7:30.

Hopefully when tempers and frustrations subside, a 20m CW net can be established to encourage more participants to the TenTec nets.

Regards,

Dave / K8QH

We need to realize and acknowledge that John, Lloyd and the others that assist are performing a time consuming and largely a thank-less job simply for others to enjoy. They are supported by the staff and management at Tentec. Again all of this for the enjoyment of others and to further the many facets of ham radio.

While you may agree or may not agree, one may like how things are handled or may not care for the ways they are handled. Please be supportive of all that is being done. Yes, positive and constructive suggestions and recommendations are always welcome for any venue, but again we must realize there are limitations and constraints that also must be considered.

In other words, "don't look a gift horse in the mouth".

# 2285. Callsigns on the net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-07 16:12:50 UTC
From: n2kpc@...
Topic: 2285  Message: 2285

I have to look up on QRZ several callsigns because some are fakes, and some folks give their call wrong including using a old call by mistake. How do I know this, I record the net to double check the info before I send the results to K3UR, John.
Also standard phonics help a lot when conditions are tough on the receiving end.
This takes a couple of hours sometime to check the info and type it up.
Then I drive 45 min. back to my home after I pack up my stuff.
Understand that when a call is mistaken for any reason by anybody it means that you have to go back thru the records and also check and confirm it on QRZ or the FCC Data Base.
That's just on my end, it a nightmare on John's end to put it all together and spent hours fixing mistakes.
When I have a long net I might finish the net 5:00PM or as late a 6:00PM when conditions allow,
but I don't get done checking the results until sometimes 7:00PM to 9:30PM. regardless of what time the net ends. That means I don't get home until 10:00pm or midnight.
God know how many hours K3UR, John is putting in with all 5 nets.
You can double the time you spend fixing mistakes to complete everything.
When you are running the whole show and doing all of the final work by yourself you have to get to the point as what it needed to do the work otherwise you have a big mess on your hands trying to get it done right.
It is not a easy job to run a CW net because of the mistakes by the sender and the Net Control not hear all of the code coming in because of a bad fist or lighting crashes, tuner uppers or just bad propagation.
Tougher on CW with bad propagation on what ever band your on let alone 40 Meters.
What John says is true and to the point to get the job done, I know where he's coming from so now I hope you do to. This is not malice as some have taken it, it's trying to get the Nets running right with what is needed now.
Things will change from time to time which is a good thing,
It is not fair to dump more work on anybody without asking first.

Thank You Ron for doing the CW Nets and know that I know what you have to go thru to do so.
K3UR John has to do it all. We as Net Controls need to adhere to guidelines to make it work for him.
I share this with you all because John is watching over us all above the call of duty and so do I.
John has to run the show with our help.
It would be wrong if K3UR John does not tell us what he needs and things just are a mess.
I hate to think what TEN-TEC President's Jim Wharton has had to go thru to since he as to run the show.
I know what K3UR John does and it not easy at all.

All worth time spent doing so for the TEN-TEC Family.

Leaving now the W2ZQ Shack Sat noon because I give a hoot.
I have Hams coming to the W2ZQ at 1:00PM for a TEN-TEC DEMO.
Then a 100 mile bike event which I have to be at by 5:30AM AM AM, Sunday then the TEC-TEC Nets

by 100:PM Sunday, Then check the net results and type them to K3UR, John.
That's nothing compared to what he has to do.
Thank You K3UR, John for all of your hard work and time.
73,
Lloyd N2KPC NCS RNCS PR Guy
Oh yeah, I forgot to mention I will stop at the Petro Truck stop to get my first meal today after putting out a house fire which means I have to spend the night at the shack to get every thing done in order o make the nets. John does more ,-,-,-
-.- . . .--. | ..- .--. | - ... . | --. --- --- -.. | .-- --- .-. -.- | .-. --- -. | .-.-.-

# 2289. KC2QMA John did it again

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-02 04:31:45 UTC
From: n2kpc@...
Topic: 2289  Message: 2289

KC2QMA, John is live streaming the TEN-TEC Nets again.... Thank God.
I had three new old Hams today come to the DVRA W2ZQ Shack and they tried an OMNI 7 out for size, then a Eagle, and then a Rebel.
They brought their base stations, non-TEN-TEC radio with them to compare to the TEN-TEC's.
Well guess what, one is getting a OMNI 7 because he likes it because of the menu and the front two way buttons are much nicer to use. He wanted the big box. He spent a hour working with it and said, WOW,
I can't reduce the noise with my other HF radios like this.
Then I took out the Eagle and he said, when is it going to grow up.
Then he tried it out for size, and compared it to his rigs and said, un bee leave a ble.
Well he listened to all of you and said what a great net.
Then came out the Rebel, What's that? I said it's a open source cw radio. He said, what's a open source radio?
Then he spent another hour checking online checking out what a open source radio is.
He getting a OMNI 7 because he heard what he sounded like on KC2QMA, John's Live Stream Net.
Thank You John once again for making a old Ham come alive and have fun today.
Then to top it off, the next two Hams followed the same pattern and they loved the live steaming of the TEN-TEC Nets too.
All three will be joining the TEN-TEC Family on the air soon. I have all of YOU to thank for that today even with
a SFI of 103.
Each and everyone of you makes it happen.
So spread the word about KC2QMA, John Live Streaming of the TEN-TEC Nets because it works to make the TEN-TEC Family grow, we all will need replacements soon or later to carry on and what a great place to start
bring in new hams to Amatuer Radio.
Oh yes, they wanted to see the Patriot too, soon, to be forth coming, how cool is that.
To top it off they will be back next Sat and will be checking in Sunday too.
And listening to KC2QMA, John's live streaming of the Patriotic, Born in the USA, TEN-TEC NETS.
Here is comes, you know it going to happen, John take a Bow.

73, --... ...--

I will be hosting the ARRL Field Day 2014 at the W2ZQ Delaware Valley Radio Association in West Trenton,
New Jersey. There will be several TEN-TEC Radios you can try out including a OMNI 7, Eagle, and a Rebel.
Bring you RV or Tent if you wish or just stop by and say hello if your in the area.
We will be there Friday night thru Sunday in the PM.
I will be at the W2ZQ Shack for the TEN-TEC Nets too.
Motels are only a mile away too.
Maybe a weekend away would to you good, HiHi.

If you would like to fly in we are three driveways from the Mercer County-Trenton NJ Airport.

Home http://www.state.nj.us/counties/mercer/ > Departments http://www.state.nj.us/counties/mercer/departments/index.html > Trenton/Mercer Airport > Trenton Mercer Airport
Trenton Mercer Airport

Aircraft Activity http://www.state.nj.us/counties/mercer/departments/airport/air_activity.html Airlines http://www.state.nj.us/counties/mercer/departments/airport/airlines.html Transportation http://www.state.nj.us/counties/mercer/departments/airport/transportation.html Accommodations http://www.state.nj.us/counties/mercer/departments/airport/accommodations.html New Developments http://www.state.nj.us/counties/mercer/departments/airport/developments.html For Pilots http://www.state.nj.us/counties/mercer/departments/airport/pilots.html Parking http://www.state.nj.us/counties/mercer/departments/airport/parking.html Rental Car http://www.state.nj.us/counties/mercer/departments/airport/rental.html Directions http://www.state.nj.us/counties/mercer/departments/airport/directions.html Airport Noise http://63.68.152.17/noise.asp Airport Noise FAQs http://www.state.nj.us/counties/mercer/departments/airport/faqs.html Contact Us http://www.state.nj.us/counties/mercer/departments/airport/contact.html
1100 Terminal Circle Dr., West Trenton, NJ 08628

Opening in 1929 to much fanfare, Trenton-Mercer Airport (TTN) has been providing a convenient, safe mode of transit to the Mercer County Region for over 80-Years. As one of only three commercial airports in New Jersey, TTN averages approximately 100,000 take-offs and landings each year; its power as an economic engine is unparalleled, contributing thousands of jobs and hundreds of millions of dollars to the local economy.
TTN's rich history spans the decades from early aviation, to its preeminent role in the production of the WWII Avenger Torpedo Bomber, and today as home to commercial air carrier service connecting Mercer County to hundreds of destinations. The aviation units of numerous Fortune 500 companies, a corporate terminal and repair base, the U.S. Customs Service, the New Jersey State Police, and the New Jersey National Guard are also located at the airport.

Many of the world's aviation, political, and entertainment leaders have passed through our gates, including Amelia Earhart, General James Doolittle, President John F. Kennedy, President Gerald Ford, President Bill Clinton, Vice-President Al Gore, President George H.W. Bush, President George W. Bush, Senator Ted Kennedy, Elton John, Diana Ross, Harrison Ford, Shania Twain and many, many more.

Indeed, TTN is more than just an airport; it's an important part of all that is great about Mercer County! We hope you find our website interesting and informative; use it to connect to our commercial airline service, the Federal Aviation Administration, rental car services, hotel accommodations, and for further information about our facility.

If you can't come We hope to work you on the air both on FD and the TEN-TEC Nets.

Thank you,
73,
Lloyd N2KPC

If you wish to come feel free to contact me, n2kpc@arrl.net

# 2293. CW Net reminder

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-07 22:34:53 UTC
From: ron
Topic: 1874 Message: 2293

There will be a cw net this Monday night NCS WB1HGA.

Lets put to bed last few days.

Thus ....

Ten Tec CW net every Monday night on 7063 +/- 7:30 Eastern Time.

REVIEW

This is a casual but controlled net. Slow speed ops are welcome.

Whether you are learning CW or experienced, the purpose is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

(NCS may, on occasions, ask for QNB. Also the official TT relay station KI8DU will, from time to time, relay to NCS stations I cannot hear)

AS (sent together) means STANDBY.

When do I ck in?

After u hear QNI, send the last two letters of ur call. This gives others a chance to sign in, and reduces interference. I may, because of doubling and tripling, get your last 2 letters incorrect. Please, send ur call once.

If I didn’t get you, be patient as I will call for a new list later.

NCS will then call stations from the list. You then send ur FULL call and exchange:

CALL, NAME, STATE, RST, RADIO.

Because band conditions may change, please take extra care to ensure I

have your call correct.

When to relay:

After a contact has completed.

Example:

You send QNB followed by ur call;

I send ur call, QNB K

You then proceed to contact that station, gather info.

When completed, you again send QNB followed by ur call.

I send ur call followed by K.

You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

Thank goodness, Spring is coming!

Ten Tekkies,

Again, as I wrote to you before,

I have been percolating the idea of running a CW net on
Wednesday night 7:30 PM Eastern Time on 14063.

Since this will not count toward certificate, we need a name for this net.

Anyone have suggestions for a name, feel free to reply either direct or here.

This is experimental. This net will run temporary and depend upon interest.
The exchange and guide lines are same as 40 meter net

OK Ten Tekkies,

“see” you on both Monday night and Wednesday night

# 2296. TEN-TEC Nets tomorrow Sunday 6-8-2014 C U There

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-07 23:52:14 UTC
From: n2kpc@...
Topic: 2296  Message: 2296

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

# 2301. Re: New, Net Name

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-08 01:33:38 UTC
From: ki8du1@...
Topic: 2295  Message: 2301

Here's another Net name suggestion to toss into the hat.

Massachusetts Slow Speed Net ( MSSN)

This would be a chit chat net, it may, and would hopefully encourage new CW OPS ( if there are any these days) to take the plunge, and check-in. It could also be a medium to potentially locate a noob CW OP whom needs a CW Mentor, thus promoting CW and or, encourage those who wish to rekindle their CW Skills.

Stations that check-in could simply make any comments that he/she may have to share with the net. Tell us about your station setup, give your wx report, Tell the net what you have been up to, etc.. Or, just simply check-in and (QRU) check out.

In tribute to the Ten Tec Nets, it provoked me to use my microphone, as I got into the hobby just for the CW, which is and will always be the " mode" of choice for me.

Anyway, enough blurting .....

Lloyd and Ron, I want you both to know that the TEN-TEC nets are not a one man show, as it was described recently. Both of you are the ones that make these nets successful.

As I plan to have more net members sharing my responsibilities in the future, there is a strong possibility of a CW net on 20 meters being a part of the TEN-TEC Certificate Program.

As it stands right now my plate is full and I have been in contact with Tony VE3DWI to take over the Wednesday SSB net as soon as he is able. He has a doctor appointment this Wednesday and will not be able to be there.

I will be out of town on business next week and will not be running the Wednesday net on June 11th. If there is anyone who would like to run the net this Wednesday, please let me know. Just keep a log of all checkins (callsign, name, location and radio) and send the list to me by email, so I can include all of the checkins in the new Data Base.

Thanks to all for making the TEN-TEC nets successful and an integral part of our Amateur Radio hobby. I have other hobbies also, (writing music, playing music and also Lionel model trains), so I have enough to keep me from ever getting bored.

I will talk to you on the nets tomorrow.

John, K3UR

>>>>>>>>>

Alright Tony, its time for disclosure. How much is John paying you ? Hi

Congrats coming your way buddy. Now I will be able to Check-in direct....maybe

Hey Lloyd, you now have a little competition with checkins.

I think that Ron had 17 checkins tonight. I think that that may be a new record.

But for now we'll have to wait on his Official Report.

We did pickup a new comer (kd8ruq Mike in Ohio). We also had a couple of non Ten Tec rigs.to join in along with a very strong QRP sig.

The 40 mtr band was not too good for about the first 5 mins but the band finally settled down.

Good job Ron, you are building up quite fan base there.

Looks to me like you just did.

If you have a message displayed, just select REPLY on your e-mail program. This will replay to the source being the Reflector for all to see. Otherwise you can highlight the sender to get their address, select reply, then copy and past their address in the e-mail address line, then delete the original address showing the reflector address. This will send the message to the originator and not to the public reflector.

Hope this helps.

# 2323. 20 meter CW net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-10 16:10:04 UTC
From: ron
Topic: 2323  Message: 2323

The temporary 20 meter CW net is on tomorrow night.
Wednesday night on 14063 at 7:30 Eastern time.

Here are few brief pointers:

When you ck in, please send the last two letters of your call
ONCE. This helps to reduce doubling and errors.
If I did not catch you, try again at NEXT QNI.

When you are called, send:
full call, name, QTH (state only) RST and brief comments.

Comments can be anything abt radio, wx etc.

There will also be a brief QRP segment when I QNI for QRP stations.

Because this is a temporary net, I have selected a name for this net.
New England Slow Speed Net (NESSN).
This was selected from many suggestions you folks have mailed in
to name this temporary net. Thank you.

I hope this will turn into another Ten Tec CW net for 20 meters.

See you then.

# 2325. THE TEN-TEC FAMILY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-10 19:03:47 UTC
From: John Occhipinti
Topic: 2325  Message: 2325

Congratulations to Ron WB1HGA Net Control, for reaching the 200 mark for checkins with the TEN-TEC 40 meter CW net.

The TEN-TEC nets were resurrected from the grave in April 2012, after several years of no TEN-TEC nets. Starting with a 40 meter SSB net each Sunday, it expanded by adding a 20 meter SSB net, due to popular demand.

On January 20, 2013 we added the TEN-TEC Certificate Program and this quickly lead to the formation of a new TEN-TEC Group on Yahoo called the ten_tec_radio_net Group.

At the end of 2013 and beginning with 2014, we expanded again to include the TEN-TEC 10 meter SSB net with Lloyd N2KPC as Net Control and the TEN-TEC 40 meter CW net with Ron WB1HGA as Net Control.

After several months, many asked for a mid week net and the TEN-TEC Wednesday 20 meter SSB net started in April 2014.

The TEN-TEC Nets and the ten_tec_radio_net Group are a family and just like any other family, there may arise disagreements from time to time. When a married couple has a disagreement, the first course of action should not be the divorce court. Discussion, understanding, forgiveness and reconciliation should be the first course of action.

I want to express my gratitude to all of our members and in the spirit of unanimity, I am clearing the path for a new 20 meter CW net to start on Wednesday July 2, 2014 at 7:30 PM Eastern Time on 14.063. I would like to ask Ron WB1HGA to be the Net Control.

We also will have a new Net Control for the TEN-TEC Wednesday SSB net at 2 PM Eastern Time on 14.325, with Tony VE3DWI taking over on June 18, 2014.

Working together will cause the TEN-TEC nets to have the quantum measure of unanimity, which helps to promote both TEN-TEC and the Amateur Radio Service. Thank you.

Topic: 2326  Message: 2326

Hello Folks'

In order to save and have today's net, I have volunteered to pick up today's Net as NCS. Otherwise the net would have been canceled for today. It took a lot of arm twisting from K3UR to convince me to pick up the net, so I finally caved in.

I worked all day yesterday putting up a new 20 meter dipole as I don't normally hear anything or very many stations my beam. So now I'll be able to switch between the beam and dipole now.

With that said, I'm going to have to rely on YOU to assist in picking up stations that I cannot hear. Its going to be an interesting net no doubt. So again, I'll be counting on you for relying.

Be prepared for me to call on you to possibly Call for checkins.

I'll try and be "on" about 1:30 eastern today. For a Net warm up, so work with me.

I'll cu at 1:30 and thanks for your support

Roger / KI8DU in WV / interim NCS

Good morning Roger,
 The wx man did me a favor, it is raining so I am available for the net. No pay for the day though.
 I will be running 1k+ into a 3el beam so even though we are close maybe u will hear me and return. Can always hope for a relay. If we have a good path I will of course pick up any stations I hear and relay them to you.
If you have any other ideas let me know.

# 2328. New England Slow Speed Net tonight.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-11 16:45:14 UTC
From: ron
Topic: 2328  Message: 2328

Last minute notes:

To encourage CW activity, a weekly Slow Speed Net is created.
This net will serve both newcomer and experienced practicing copying or
sending CW.

The New England Slow Speed Net is just that. This means CW speeds of
13 WPM or less. Please, no speeding is allowed! (smile)

This net may become another Ten Tec CW Net, but for now it is a temporary net.

The exchange is CALL, NAME, STATE RST AND COMMENTS. Please keep comments
brief, thank you.

When I QNI, send last 2 letters of your call ONCE. This helps to reduce doubling.
I will work you from a list. If I missed you, there will be another QNI, so don’t worry.

14.063, 7:30 Eastern Time (23:30Z)
Please zero beat my signal or I may not hear you.

See you tonight.

72

# 2330. New England Slow Speed Net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-11 16:58:46 UTC
From: ron
Topic: 2330  Message: 2330

Brief reminder,

The temporary New England CW net is tonight.
Temporary because it may morph at some future date into
Ten Tec CW net.

When I send CQ, please zero beat my signal or I may not hear you.

Exchange
CALL NAME STATE RST COMMENTS Please keep comments brief.

When I send QNI
send last 2 letters of your call ONCE. This helps prevent doubling.
If I missed you, I will call QNI again.
Roger, KI8DU is our relay station.

see you tonight!

Ron, wb1hga
Ten Tec CW NCS

John,
I believe your post did make it on the net and as always I do appreciate the time you spend informing us as to what is going on with the nets.

I also appreciate the fact that you did realize that there was interest in a 20 meter CW net on Wednesdays and made it happen. Although I do not know code and understand the prejudices by many against keyboard CW and out of respect for those that do know code I do not check in but I do keep up with it via a CW decoder when conditions allow to show my support for our family. So thanks for more radio fun time. It's one of many things that keeps me anchored to my brothers and sisters.

You keep doing what you are doing and the majority of us will support you.

We really do appreciate you, all of the net controllers, and the relay stations for your dedication to US.

Congratulations to Ron.

Ray...KD4HJT

Ten Tekkies,
We logged in 9 qso's tonight.
Not bad for first showing.
There were several that needed relay.
I didn't want to leave anyone out.

Give yourselves a big hand!

A posting of results will follow.

Today at 10:51 AM
SB QST @ ARL $ARLB012
ARLB012 FCC Okays Changes to Amateur Radio Exam Credit, Test
Administration, Emission Type Rules

ZCZC AG12
QST de W1AW
ARRL Bulletin 12 ARLB012
From ARRL Headquarters
Newington CT June 11, 2014
To all radio amateurs

SB QST ARL ARLB012
ARLB012 FCC Okays Changes to Amateur Radio Exam Credit, Test
Administration, Emission Type Rules

In a wide-ranging Report and Order (R&O) released June 9 that takes
various proceedings into consideration, the FCC has revised the
Amateur Service Part 97 rules to grant credit for written
examination elements 3 (General) and 4 (Amateur Extra) to holders of
"expired licenses that required passage of those elements." The FCC
will require former licensees - those falling outside the 2-year
grace period - to pass Element 2 (Technician) in order to be
relicensed, however. The Commission declined to give examination
credit to the holder of an expired Certificate of Successful
Completion of Examination (CSCE) or to extend its validity to the
holder's lifetime.

The Report and Order may be found on the web in PDF format at,
http://transition.fcc.gov/Daily_Releases/Daily_Business/2014/db0609/FCC-14-74A1.pdf
http://transition.fcc.gov/Daily_Releases/Daily_Business/2014/db0609/FCC-14-74A1.pdf
.

"Our decision to grant credit for written examination Elements 3 and
4 for expired licenses that required passage [of those elements]
will provide some relief for former General, Advanced, and Amateur
Extra class licensees," the FCC said, "and is consistent with how we
treat expired pre-1987 Technician class licensees who want to
reenter the Amateur Service." Pre-1987 Techs can get Element 3
credit, since the Technician and General class written examinations
in that era were identical. The Commission said current rules and
procedures that apply to expired pre-1987 Technician licenses "are
sufficient to verify that an individual is a former licensee under
our new rules."

The Commission said that requiring applicants holding expired licenses to pass Element 2 in order to relicense "will address commenters' concerns about lost proficiency and knowledge, because a former licensee will have to demonstrate that he or she has retained knowledge of technical and regulatory matters." The FCC said the Element 2 requirement also would deter any attempts by someone with the same name as a former licensee to obtain a ham ticket without examination.

In 1997 the FCC, in the face of opposition, dropped a proposal that would have generally allowed examination element credit for expired amateur operator licenses. In the past, the FCC has maintained that its procedures "provide ample notification and opportunity for license renewal" and that retesting did not impose an unreasonable burden. The issue arose again in 2011, with a request from the Anchorage Volunteer Examiner Coordinator.

The FCC pulled back from its own proposal to reduce from three to two the minimum number of volunteer examiners required to proctor an Amateur Radio examination session. The ARRL, the W5YI-VEC and "a clear majority of commenters" opposed the change, the FCC said. The FCC said it found commenters' arguments persuasive that that the use of three VEs "results in higher accuracy and lower fraud that would be the case with two VEs." In a related matter, though, the Commission embraced the use of remote testing methods.

"Allowing VEs and VECs the option of administering examinations at locations remote from the VEs is warranted," the FCC said. The National Conference of Volunteer Examiner Coordinators (NCVEC) in 2002 endorsed experimental use of videoconferencing technology to conduct Amateur Radio testing in remote areas of Alaska. The Anchorage VEC has long pushed for the change, citing the expense to provide Amateur Radio test sessions to Alaska residents living in remote areas.

The FCC declined to address "the mechanics" of remote testing, which, it said, "will vary from location to location and session to session." The Commission said specific rules spelling out how to administer exam sessions remotely "could limit the flexibility of VEs and VECs." The FCC stressed the obligation on the part of VECs and VEs "to administer examinations responsibly" applies "in full" to remote testing.

The FCC amended the rules to provide that VEs administering examinations remotely be required to grade such examinations "at the earliest practical opportunity," rather than "immediately," as the rule for conventional exam sessions requires.

Finally, the FCC has adopted an ARRL proposal to authorize certain Time Division Multiple Access (TDMA) emissions in the Amateur Service. The Wireless Telecommunications Bureau in 2013 granted an ARRL request for a temporary blanket waiver to permit radio amateurs to transmit emissions with designators FXD, FXE, and F7E, pending

resolution of the rulemaking petition.

"Commenters strongly support amendment of the rules to permit these additional emission types," the FCC noted. "The commenters assert that the proposed rule change 'is consistent with the basis and purpose of the Amateur Service,'" and will allow repurposing surplus mobile relay equipment from other radio services in the Amateur Service, the Commission added.

The FCC said it also will make "certain minor, non-substantive amendments to the Amateur Service rules." It is amending Part 97 "to reflect that the Commission amended its rules to eliminate the requirement that certain Amateur Radio Service licensees pass a Morse code examination," the FCC said in the R&O. It also said it was correcting "certain typographical or other errors" in Part 97.

The new rules become effective 30 days after their publication in The Federal Register, which is expected to happen this week.

Good net. Gives me an excuse to use cw. Frankly, I don't care about points or certificates. I don't need the recognition. I'm happy to get  to know y'all who have Ten Tech Rigs. I feel like I have a great new group of friends through these nets. That's the real positive from this endeavor for me.

Hats off to you, John, Lloyd, Tony, et all.

# 2371. 239 a good number

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-13 01:29:35 UTC
From: n2kpc@...
Topic: 2371  Message: 2371

239 checkins during the past week with such low SFI numbers was good.
Today the SFI reached 200 and hopefully it hangs in there for Sunday for better propagation for the
TEN-TEC Nets.
Some good DX today on 17 Meters.

Rio de Janeiro and Sao Paulo as Seen From the International Space Station

As fans around the world tune in to World Cup 2014, a few fans out of this world will be watching, too. United States astronauts Reid Wiseman and Steve Swanson and German astronaut Alexander Gerst will be cheering on their teams from some 230 miles above Earth aboard the International Space Station.
Here, Wiseman captures an image of Rio de Janeiro and Sao Paulo at night as the International Space Station orbits the Earth. Sao Paulo is the farthest cluster of lights on the right side and Rio de Janeiro is closer to the middle of the picture. There are three World Cup 2014 stadium cities in one picture: Arena de Sao Paulo, Estadio Mineirao (Belo Horizonte), and Estadio Do Maracana (Rio de Janeiro

SFI 151 A index 005 K index 2

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

C U There .-.-.-

K9ARM has over 100 checkins from mobile and this antenna makes a great base 10-160 meter setup for fast take down too.
I am testing the QSO-KING end feed wire 6-160 with a line isolater today and Sunday morning as well.
C U tomorrow on the TEN-TEC Nets.
73,
Lloyd N2KPC at the W2ZQ Shack all night.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

Dad;

In Memory:

A thousand times we needed you
A thousand times we cried
If love alone could have saved you
you never would have died
A heart of gold stopped beating
two twinkling eyes closed to rest
God broke our hearts to prove he only took the best

Thanks Ron, Lloyd and all, I could not have done it without help from John, Lloyd and all the relays. I'll add documentation and photos when I can, closing on a house in a few weeks and very busy right now. Also getting a new company F-150 in a month or two and I get to re-install it all.

Happy Father's Day to all the fathers!

A brief reminder about tonight's net:
7:30 Eastern time 7063+/-.
Exchange
Call, Name, STATE (only) RST, Radio.
This is slow speed net. This means any speed up to
13 WPM.
No speeding! (Smile)
After I QNI, send last 2 letters of your call ONCE.
This help clears up any doubling.
You will be called from a list.
"see" you tonight!

# 2406. 20 meter CW net

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-18 16:55:55 UTC
From: ron
Topic: 2323  Message: 2406

The temporary New England CW net is tonight.
Temporary because it will soon morph into Ten Tec CW net.

The Gist of it:
When I send CQ, please zero beat my signal or I may not hear you.
Because it’s a slow speed net, we try to encourage cw activity and
welcome new comers.
Thus: any speed up to 13 WPM is allowed. (no speeding)

Exchange
CALL NAME STATE RST COMMENTS Please keep comments brief.

When I send QNI
send last 2 letters of your call ONCE. This helps prevent doubling.
If I missed you, I will call QNI again.
Please note: Roger, KI8DU is our relay station.

see you tonight!

Ron, wb1hga

# 2424. 200 check-ins

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-19 01:33:20 UTC
From: Tony Lelieveld
Topic: 2424  Message: 2424

Jim and John,

Here's a big thank you to John and especially Jim Wharton. Last week Marianne VE3MXT (my spouse) received her 50 check-in certificate with some nice coffee. She's tickled pink. Yesterday I received my 200 check-in certificate with some nice coffee and a TEN-TEC coffee mug to drink it from.

Thanks to you guys I have to expand my shack so I can find a wall to hang all those certificates on. The only drawback is I'll have to steal it away from Marianne's space but on second thought it probably won't go over well. So... back tot he drawing board.

Here's to y'all "bottoms Up". Thanks again.

Tony and Marianne VE3DWI and VE3MXT.

# 2426. Re: [ten_tec_radio_net] RESULTS FOR TEN-TEC NETS WEEK ENDING 6-18-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-19 03:22:50 UTC
From: ki8du1@juno.com
Topic: 2420  Message: 2426

VE3DWI :Congrats Tony, nice turnout. I even checked with you barefoot! So now I can look forward to the Weds Nets again.

W3LI : Kudo's to you to Andy for your 200th Certificate.

WB1HGA : Thanks also go out to Ron ( also congrats with the new upcoming cw net)

N2KPC : Lloyd for your continued support and help with the SSB Nets

and,

NO4A : Jim, thanks for your generosity and your time involved as well. Your nets provoked me into using a Mic after all these years as a student of CW. Course I've been using a mic now sine the Ten Nets and the commencement of the ARRL Cent Party

Roger / KI8DU in WV

K8MAZ MARK MI

W3LI ANDY PA

VE3DWI TONY ON

we had 9 ck ins.
FB Rich (N0ENO) for making it through. I was able to copy you this time (smile).
There were no relays and the band seemed to behave like 40 meters.
Thank you for making this NESSN a success. You all have displayed
interest to support a 20 mtr CW net.

catch you all next Wednesday night.

Ron, thank you for the good job, as you prepare our net members for the new TEN-TEC 20 meter CW net on July 2nd.

I have one small request. Can you ask for the radio being used and list them alongside the person's name, call sign and location. I am tracking all radio's. Thank you.

# 2433. TEN-TEC NETS Tomorrow Sunday 6-22-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-21 20:42:09 UTC
From: n2kpc@...
Topic: 2433  Message: 2433

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

HI Lloyd
Thanks for all the extra work to log me in on 20 m
Had a new radio to me a Flex 3000 .Stil in Fl been hear about 3 months after my wifes mother died.Using a portable BW antena the bigest problem only had a 10 amp power supply with me not enough for flex
Thanks to John for logging me in on 40 Also a big. Thanks Lloyd
God bless

I noticed the same thing with the frequency and I did zero beat on John. The audio was nice and clear but still had that little burp on it. Next time conditions are better I will record it, make a "wave" file and email it to John.

73, Tony VE3DWI.

Hello John / K3UR

Yeah, your Corsair was a little off Freq, but it was nothing to turn on my RIT. Looking at the RIT readout you were 50 cycles low.

No biggie, Your audio was just fine. Your signal/audio was stable with NO drift throughout.

Thanks for all you do.....

Roger / KI8DU in WV

I heard the same thing John. Audio sounds good but there is a popping that is hard to describe on peaks. I would like to hear it with the mic going straight into the radio without the processing.

From: Robert
Topic: 2442  Message: 2446

There is a internal ALC cal on the PWR control board. That might be the source of the pop. With external processing, no telling what's taking place.

As to frequency, every net that I've participated, net control is always "on frequency" as it is net control that establishes net frequency. It is all other stations responsibility to be on net control frequency.

Just my take as a "radio fixer".

This is really of no importance.....

I probably in the past have given or said your callsign incorrectly as (i.e) VA3DWI

How come ( Appalachian slang here )....but why does your email address correlate to the callsign above ?.

I'm setting here bored with nothing else going on, the bands are down, and my Dr just called and canceled my Appt.

Guess I'll go and clean up the breezeway then move towards the living room :> )

Hi Roger,?

Simple explanation. I have three call signs. VE3DWI which is my main call sign. ? VA3DWI which is my 2mtr repeater call sign and K8DWI (extra) which I use when I am in the USA☐.

We are only 45 min. driving away from the U.S. border and since I look after the U.S. ?Sault Ste Marie repeaters I got my U.S. call as well.

When I applied for a Gmail account, they would NOT allow me ve3dwi at gmail.com. So I took va3dwi at gmail.com. I contacted Google and was unable to get an explanation for their refusal. I was a bit ticked off about that but what can you do.

I was PA0MIH while living in the Netherlands (born and raised there)☐ until immigrating to Canada in 1970. Now you know my life story, well not quite hi.... hi. See my call at QRZ.com. My lovely wife, Marianne VE3MXT, was able to get her email as ve3mxt, go figure!

73, Tony VE3DWI.

Hi Tony / VE3DWI

Boy, there was no path between you an I yesterday (20m). That's very unusual. Suppose it was due to the SFI being 98.

On the other hand, I heard John direct, that being unusual as well for 20m.

Hopefully propagation will allow me to hear you or anyone on Weds.

See you then ??

Bob K4TAX, I had to release your post, because it was locked up in the Spam file. Only Al Gore the inventor of the Internet knows why this happened!

Thank you for reminding the Group that the Net Control is always on frequency, no matter what other radios are displaying. This goes for Lloyd, Ron, Tony and myself when running the various TEN-TEC Nets.

From: Bob McGraw - K4TAX
Topic: 2442  Message: 2453

As a former net control, both civilian and military, it is necessary for the NCS to be able to hear ALL of the stations that participate in the net activity. Therefore the NCS will benefit by adjusting net frequency, largely due to QRM, such that NCS has better receiving conditions. As to NCS using RIT, this defeats the objective of having a clear of receiving frequency. As to an individual station, they only need to hear the NCS and it is the responsibility for each station to be on the NCS frequency.

As to analyzing a receiver or transmitter frequency, I find too many operators adjust their radio such as to display a certain number i.e. frequency and proclaim "they are on that frequency". As one that has repaired quite a number of radios, both old and new, I find more units in error regarding the display v.s actual frequency than those that are correct. Some are only off a few Hz while many are off 100 Hz or more. Yet the display does not indicate such. A radio such as the Corsair can display only to 100 Hz resolution and that is +/- one count.

I really think this all boils down to the digital displays on today's radios to which we deem absolute, and in reality are not, and we find it all too easy to just dial in the published net frequency and fail to correctly tune for NCS. To that end, on the ham bands, published net frequencies are always +/- QRM.

73
Bob, K4TAX

# 2460. TUNE TO THE NET CONTROL FREQUENCY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-06-24 17:26:44 UTC
From: John Occhipinti
Topic: 2460  Message: 2460

Upon suggestions from our net members, I want to pass on a few important suggestions and reminders.

When beginning the net, the Net Control Station should ask for everyone to tune to the frequency of the Net Control Station.

When it is necessary to move the designated net frequency, it is advisable for the Net Control Station to announce that they have moved the net from the published net frequency, to allow for better reception and to prevent QRM.

For the past 37 years my favorite saying has been, "when transmitting on the Amateur Radio Bands we should always be clean, articulate and zero beat". Thank you.

12 checkins, 40 meter CW net Monday 7:30PM EDT on 7.063. Ron WB1HGA, Net Control.

28 checkins, 20 meter SSB net Wednesday 2PM EDT on 14.325. Tony VE3DWI, Net Control.

SPECIAL NOTICE:

A 6th weekly TEN-TEC net will be added starting on July 2, 2014. This is the TEN-TEC 20 meter CW net at 7:30PM EDT on 14.063 with Ron WB1HGA, Net Control. Please support Ron on this new net.

Congratulations to the new 50 Checkin Certificate Winners:

KB1ZCZ  David  MA

WD8BOU Ed OH

Congratulations to the new 100 Checkin Certificate Winner:

KD4HJT Ray SC

Congratulations to the new 200 Checkin Certificate Winner:

W3LI Andy PA (Andy you are now able to join Tony VE3DWI in enjoying your coffee!

A special ata-boys to Tony and Andy for the fine job today. Tony's first net control and he had 28 checkins, with the help of Andy W3LI on the Wednesday SSB net on 14.325.

We had 29 new people check into our 5 nets this past week.

SPECIAL: New Stats for the different radios that checked into the 5 TEN-TEC nets this past week.

Omni VII with 55

Orion Radios with 32

Eagle with 20

Corsair Radios with 13

Jupiter with 11

Other Omni Models with 9

Argonaunt Models with 4

Paragon with 3

Pegasus with 3

544 Model with 3

Generic Radios with 55

I hope you liked this new stat.

I will send the new Certificate Data Base as an ATTACHMENT with this post and also send it to the FILES section. Thanks to all for your support. God bless and have a safe and wonderful week.

There will be no 20 MTR net on Wednesday night, July 4th.
I’m sure, like my family, you will be enjoying the holiday (especially the fireworks).

However, when the 20 MTR net resumes on July 11, it will begin
the new Ten Tec 20 MTR CW net and it will count for credit towards Ten Tec certificate.

For families living in flood zone areas, let’s pray for their safety.

Lloyd, take care of yourself and do not worry about the nets. We will take care of everything. The Lord will supply your needs so do not worry.

I wrote a song over 40 years ago called, "WHY WORRY WHEN YOU CAN PRAY".
You have a lot of friends who are pulling for you and praying for you.

Rest and take your medication and you will get better. God bless your wife Gaye and give her the strength to carry on.

Lloyd, faith can move a mountain, only believe and you shall receive.

Your brother in the Lord,

Hello Lloyd,

I’m sorry you are not feeling well my mother and I both go through periods of vertigo sometimes it’s so bad I can barely stand up. But the good news is that it usually goes away in a few days or so. It is always due to an issue with the inner ear and for most people due to a problem in the sinuses.

Sometimes when your sinuses don’t drain properly it can cause vertigo.

If possible try to take a antihistamine, This will help drain and dry up your sinuses and may relieve or cure your vertigo.

Hang in there I know how you feel.

Hope you feel better soon.

John/73

KC2QMA

Hi John,

The Vertigo attack that started Tuesday night continues with no let up.

Not good, Blood test done today, Balance testing Monday, MRI July 3, Back to Docs July 16.

I have 40 days vac and sick time, Then Disability August 3 I turn 60 which I would get some retirement from work, but without medical of any type. only 15 years with the library.

Obamacare would allow me to get insurance.

We will see.

Gaye has to work all but one weekend out of the month.

So as of now I can't get to the DVRA W2QZ Shack for the TEN-TEC Nets let alone Field Day.

That is my regret because of the New Hams and future Hams that wanted to come for FD.

I will keep you posted about Sunday's Nets.

As of now This Sunday is out.

I will confirm about Sunday

I have to stop the two meds today because of the testing Monday which will make for a very tough Sunday.

We will see what is behind the severe vertigo Hopefully not in the brain, a tumor or MS.

The nerve doc thought it might be in the brain so off to the MIR.

Thinking A-OK but the balance is very bad.

Feel free to let anyone know what's happing with me.

If I can get someone to take me up to the W2ZQ Shack Sunday that can support me walking I may show up and do the TEN-TEC Nets. If the nausea is not to bad.

SEASICK on land, who would have thought.

73,

God Bless.

Lloyd

Started working on the transceiver I picked up cheaply this week. Weirdness is that when you connect the 12V the display comes on but the on-off switch has no effect. Ohm readings indicate the switch is good. No sound and PTO needs a rebuild.

Thoughts?

Lloyd,

Vertigo generally a disorder of the semicircular canals in the inner ear. Sometimes, if meds don't work, there are physical therapists who can give you exercises to retrain these semicircular canals. You might want to mention this to your ENT doctor. I am an orthopedic hand surgeon  and this is not in my area of expertise but what is there to lose? Good luck and God Bless.

That is correct on the power switch. The center two pins of the power connector on the rear go to the power switch. This is used to turn on and off the AC to the power supply. The switch is not rated for the DC current the radio draws.

As to the rest, good hunting.

Hello Gary,
Glad youi got one of the Omni series radio's. One thing that is well known to happen is that the on-off switch goes bad pretty quickly as it does not handle the surge when turned on. Most operators leave the switch turned on and use the power supply to turn the rig off and on. Some even short or bypass the power switch so as not to have it accidently turn on w/ the switch and end up having to get another. This may be the case with yours; the switch is good but does not function.

As to sound, the speaker cable may be broken. This happens often to someone who does not know that the cable is a bit short and does not plug into anything but is soldered at both ends. I did that when I got my first one. Try the external speaker output jack and see what happens with that.

As to the PTO, Ten Tec still sells a rebuild kit for around $30.00 or so. It comes with all the parts to rebuild it. You can take it apart and see if the balls are ok but just dry grease. If so you can clean all of the parts up and use a good grade of grease, light weight, and re=grease it and put back together. A lot of the older folks use bicycle wheel bearing grease. I think it's green.

I hope this is of some help.
Best regards,
Ralph Howes

Subject: [ten_tec_radio_net] Re: illness

Lloyd, when I was 34 years old in 1974 I came down with a similiar illness that the doctors called Labrynthitis. I had many of the same symptoms which included, dizziness, nausea, weakness, pain in my head and could not stand up. After exhaustive tests the doctors told me that I would have this Labrynthitis for the rest of my life.

I gave up the rock 'n roll music field 17 years prior to this in order to serve the Lord in the ministry of His Word and with my music. I knew that God had called me into the ministry for a purpose and I prayed and asked God to confirm my calling into the ministry by healing me completely of this infirmity.

My prayers were answered almost immediately and more than 40 years have past and I have had no signs of this at the age of almost 75. I want to share this with you in order to build

your faith and to give God all the glory for His healing touch.

Cheer up Lloyd, because you have an army of supporters who are pulling for you and praying for you. Even though we believe in God's healing power, we need to exercise wisdom and do what the medical experts are recommending. Rest all you can and read the Book of Matthew and refresh your mind with the life of Jesus, who healed all manner of sickness and diseases.

Jesus is a friend that sticketh closer than a brother and he is touched with the feeling of our infirmities. After all, He suffered more than any human being has suffered and He is moved with compassion when His followers call on His name and trust in His power.

Lloyd, please do not worry about the nets. I will take care of this and be assured that you have been a trusted friend of mine and faithful supporter of the TEN-TEC nets. Your Net Control position is secure and will be waiting for you when you are strong enough to return. God bless you and your dear wife Gaye.

Your Brother in the Lord,

John, K3UR

Subject: Re: illness

Hi John,
The Vertigo attack that started Tuesday night continues with no let up.

Not good, Blood test done today, Balance testing Monday, MRI July 3, Back to Docs July 16. I have 40 days vac and sick time, Then Disability August 3 I turn 60 which I would get some retirement from work, but without medical of any type. only 15 years with the library. Obamacare would allow me to get insurance.

We will see.

Gaye has to work all but one weekend out of the month.
So as of now I can't get to the DVRA W2QZ Shack for the TEN-TEC Nets let alone Field Day.
That is my regret because of the New Hams and future Hams that wanted to come for FD.
I will keep you posted about Sunday's Nets.

As of now This Sunday is out.
I will confirm about Sunday
I have to stop the two meds today because of the testing Monday which will make for a very tough Sunday.
We will see what is behind the severe vertigo Hopefully not in the brain, a tumor or MS.
The nerve doc thought it might be in the brain so off to the MIR.
Thinking A-OK but the balance is very bad.
Feel free to let anyone know what's happing with me.
If I can get someone to take me up to the W2ZQ Shack Sunday that can support me walking I may show up and do the TEN-TEC Nets. If the nausea is not to bad.
SEASICK on land, who would have thought.
73,
God Bless.
Lloyd

Lloyd Price <n2kpc@yahoo.com> wrote:

Hi John,
Tuesday afternoon I took a nap after work.
When I got up I had lost all balance and was sick to stomach when I moved my head.
Today I went to all the Doctors and I need Prayer Power. Then a Brain MRI, Then rehab to be able to move with out being off balance and dizziness without feeling sick.
KC2ULS Brother Gary and his Wife Jean took me to get meds and to all the Docs.
I am off from work until 7-9-2014.
This is very bad for Gaye and me because we are still behind 2 mortgage payments and trying to catch up now that
she has full time at Lowes.
It is early yet and I thought it was just a ear infection, but the Doc said no it is in the brain nerve going to the ear.
I can not walk without holding on to somebody or I fall in any direction...and feel seasick within 2 seconds.
Hopefully the vertigo med will help so I can go to the W2ZQ Shack for the Wonderful, Patriotic, TEN-TEC Nets which I love to do.
I hope that I can do FD too. We will see.
I won't even go into the work thoughts now, good grief.
Know this Brother John, Thank You for all you do for us all.

To soon to tell what the out come will be, and what the MRI will show.
Maybe even the Kidneys with the Diabetes, I know after the blood tests.
I fell a better now and was able to walk to the bathroom without falling over just now so there is hope.
2.5 hours after taking the meds.

If I can not do the TEN-TEC Nets I will let you know, I will keep you updated Sat. and Sunday Morning.
This is a new one for me and time will tell, But the past 24 hours have been hell.
The Good Lord knows what is best therefore I will rest.
73,
Lloyd your Brother in Christ.

# 2485. TEN-TEC Nets today Sunday 6-29-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC European 80 meter SSB net meets each Wednesday at 1900 UTC (2100 hours local Belgium Time) on 3.685. Bob ON4LDL is Net Control.

The 40 meter and 20 meter SSB nets stream the audio by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

C U There .-.-.-

Good morning Jim Wharton,

Thank you for the autographed 200 check in certificate and gifts. Drinking a cup of coffee as I write this. Tastes real good out of the TenTec Mug.

Thank you and the staff there for all of the support to the amateur community. I hope the one on one continues.

73's W3LI

Philip C. (ANDY) Anderson

PS, Prayers for Lloyd, N2KPC

How we cured a very Stubborn PARAGON 585. My Paragon would take a notion to just Quit Transmitting and Receiving. Turning the power switch Off and then back On would always fix the problem. This happened most times when trying to run over 50 Watts SSB. As the frequency went higher, the problem got worse. After changing out the Spare boards that we have and no difference. We knew that it was time to look further. What we finally found was bad capacitors inside the PA ( power amplifier ) enclosure. There are 3 capacitors inside this RF Tight Box. Changing all 3 of them fixed the issues that we were having. My guess is that RF was getting out of the PA enclosure on the Power Lead or other wires and playing havoc with the very simple Digital/Computer workings. But, no matter how it was doing it, the replacement of the 3 Capacitors in the RF/PA Enclosure took care of my problem.
Now we can run Full Power on the Ten Tec Nets again. Looks like about 19 to go for the 100 Check in's. That Good Ten Tec .... Goodson Bro's Coffee sure is going to taste nice. I need to find an East Tennessee Station to purchase some Goodson Bro's Coffee and send it to me. I would pay for the coffee and shipping. The closest thing we find here in Middle Tennessee is Folgers Black Silk.....

I put some pictures up for you to enjoy.
Also of the TEN-TEC Radio demo for some of the new Hams that stopped by to visit.
It was a great FD with BBQ Hotdogs, Hamburgers, and lots to drink.
Several Ham brought their old rigs and new to try out on the big antennas and everybody did there own thing and had fun.
They helped setup and teardown, cook BBQ, check out their radio new and old.
Then checked in to the TEN-TEC Nets.
FD was outside, but the W2ZQ Shack had AC for some who could not be in the heat of the day.
I wish you could all have been here because we had a nice time.
Think about maybe next year that some of you in the TEN-TEC Family that are close by might get together for FD. We did here in New Jersey and had fun too.
Winter FD is coming and we will do it again.

Hi Tony,
Gaye and I both had a day off together and we could think of a better think to do but to drive to West Trenton, NJ to the W2ZQ shack to check in to your Net.
Just walked in the door, "10:00 PM ".
Had to wait out the bad thunderstorms until 9:15 PM to drive back to Mount Holly, NJ.
What a lighting display we saw.
You were 59++ all the way.
And Gaye enjoyed getting a chance ton say hi.
Good job Tony, Take a bow.
We also enjoyed saying hi to Andy, W3LI on a Wednesday afternoon, HiHi.
Yet another big thunderstorm hitting Mt. Holly, NJ now at 10:15 PM.

John, K3UR and Andy, W3LI.
W2ZQ Antenna system pointing North due to 40 Meter 2 element yagi problem.
There was a note from the Shack director not to move the rotor so the antennas face north to protect them
from the high winds until a climber fix the two element Force 12 forty meter yagi problem.
I can still do a lot with them set at that heading with back scatter as well with the dipoles.
Just a heads up.
No time frame yet.
73,
Lloyd N2KPC NCS RNCS PR
PS we are getting big thunderstorms still and its 10:50 PM no letup in site.

# 2536. NOCTILUCENT OUTBURST

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-04 04:00:50 UTC
From: n2kpc@...
Topic: 2536  Message: 2536

NOCTILUCENT OUTBURST: Sky watchers in Europe are reporting an outburst of bright noctilucent clouds (NLCs). The display began at sunset on July 3rd, filling northern horizons with electric-blue ripples, swirls, and tendrils of light. Heiko Ulbricht sends this picture from Herzogswalde, Saxony, Germany:
http://spaceweathergallery.com/indiv_upload.php?upload_id=98974
"These images were made at midnight!" says Ulbricht. "I am still in a trance." Similar reports have come from Poland, the Netherlands, Scotland, England and Belgium. The display could spread to Canada and northern parts of the USA in the hours ahead as night falls across North America. Monitor the realtime gallery for updates

Lloyd N2KPC NCS RNCS PR

# 2537. NLCs are Earth's highest clouds. Seeded by "meteor smoke part 2

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-04 04:06:19 UTC
From: n2kpc@...
Topic: 2537  Message: 2537

NLCs are Earth's highest clouds. Seeded by "meteor smoke http://science.nasa.gov/science-news/science-at-nasa/2012/07aug_meteorsmoke/," they form at the edge of space 83 km above Earth's surface. When sunlight hits the tiny ice crystals that make up these clouds, they glow electric blue.

NLCs appear during summer because that is when water molecules are wafted up from the lower atmosphere to mix with the meteor smoke. That is also, ironically, when the upper atmosphere is coldest, allowing the ice crystals of NLCs to form.

The natural habitat of noctilucent clouds is the Arctic Circle. In recent years, however, they have spread to lower latitudes with sightings as far south as Utah and Colorado. This will likely happen in 2014 as well. Observing tips: Look west 30 to 60 minutes after sunset when the Sun has dipped 6o to 16o below the horizon http://www.spaceweather.com/nlcs/geometry.gif. If you see luminous blue-white tendrils spreading across the sky, you may have spotted a noctilucent cloud

This posting is for 3 reasons:

1.To wish all of our net members a Happy 4th of July!

2.To see how many people read this ten_tec_radio_net Group on a daily basis.

3. If I receive a minimum of 50 responses in favor of a July 5th. (Saturday) 20 meter SSB net tomorrow, I will conduct the net giving double checkin credits to all who check into this net at 2PM Eastern Time on 14.325.

Note: These double checkin credits are exclusively for this July 5th Saturday 20 meter SSB net only.

I need to hear from you by 8PM tonight Eastern Time and if I receive at least 50 responses in favor of this Special Net, I will announce it here. Thank you and enjoy this special day (July 4th) for America, our independence.

# 2564. OMNI-D Questions

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-05 19:26:28 UTC
From: Gary H. Harmon, Jr.
Topic: 2564  Message: 2564

I am getting ready to tear into a clean OMNI-D transceiver I picked up last week. It looks to be complete, has both filters and a close visual inspection sees no evidence of damage.

The digital display is working fine.

It has no noise coming out of the speaker. Earphones hear a light fixed tone that does not vary. There is no meter indication. It does not transmit.

Any suggestions from the Ten-Tec experts would be appreciated.

# 2579. CW Net tonight!

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-07 19:49:20 UTC
From: <gandalfthegrey66@...>
Topic: 2579  Message: 2579

Ten Tec CW net every Monday night on 7063 +/- 0030 Z (7:30 Eastern Time).

REVIEW

This is a casual but controlled net. Slow speed ops are welcome. Speed limit

is 13 wpm. Please, no speeders! (smile)

Whether you are learning CW or experienced, the purpose of this net is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

AS (sent together) means STANDBY.

When do I ck in?

After u hear QNI, and only then; send the last two letters of ur call. NCS will acknowledge by repeating ur last two letters of your call. Please give others a chance to sign in, and help to reduce doubling, tripling etc. After accumulating a small list, NCS will then call stations from the list. When you hear your letters, you then send ur FULL call and exchange: CALL, NAME, STATE, RST, RADIO. (does NOT have to be Ten Tec radio)

Please send your call again when finished to ensure I have ur call correct. Propagation can vary week to week. It can be enough to get it wrong.

When to relay: After a contact has completed.

Example:

You send QNB followed by ur call; I send ur call, QNB K. You then proceed to contact that station, gather info. When completed, you again send QNB followed by ur call. I send ur call followed by K. You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

72 Ron, wb1hga TT CW NCS

Subject: [ten_tec_radio_net] CW Net tonight!

Ten Tec CW
net every Monday night on 7063 +/- 0030 Z (7:30 Eastern Time).
REVIEW
This is a casual but controlled net. Slow speed ops are
welcome. Speed limit
is 13 wpm. Please, no speeders! (smile)
Whether you are learning CW or experienced, the purpose
of this net is to promote
CW activity and have fun doing so. (contacts count
towards Ten Tec certificates)
The protocols are as follows:
For those not familiar, NCS is net control station; QNI?
means check in now.
QNB means relay. Use this if u hear a station NCS cannot
hear.
AS (sent together) means STANDBY.
When do I ck in?
After u hear QNI, and only then; send the last two
letters of ur call. NCS will acknowledge by repeating ur last two letters of
your call. Please give others a chance to sign in, and help to reduce doubling,

tripling etc.  After accumulating a
small list, NCS will then call stations from the list. When you hear your
letters, you then send ur FULL call and exchange: CALL, NAME, STATE, RST, RADIO.
(does NOT have to be Ten Tec radio)
Please send your call again when finished to ensure I
have ur call correct. Propagation can vary week to week. It can be enough to get
it wrong.
When to relay: After a contact has completed.
Example:
You send QNB followed by ur call; I send ur call, QNB K.
You then proceed to contact that station, gather info. When completed, you again
send QNB followed by ur call. I send ur call followed by K. You then proceed to
relay that info.
Following the above suggestions will help us run a smooth
net.
 72 Ron,
wb1hga TT CW NCS

Anyone following “FUTEBALL”? Some interesting teams
coming into the FIFA  Cup finals.

July 9, 2014

MEDIA ADVISORY M14-118

NASA TV Coverage Set for Saturday Orbital-2 Mission to Space Station

NASA Television will provide live coverage of the upcoming Orbital Sciences' mission to resupply the International Space Station. Orbital's Cygnus cargo spacecraft is schedule to launch from the Mid-Atlantic Regional Spaceport's Launch Pad 0A at NASA's Wallops Flight Facility in Virginia on Saturday, July 12 at 1:14 p.m. EDT.
Weather conditions at Wallops Tuesday night delayed the scheduled rollout of Orbital's Antares rocket to the launch pad Wednesday, prompting the company to delay launch by a day.
NASA TV will air a comprehensive video feed of launch preparations and other footage related to the mission beginning at noon. Launch coverage on NASA TV will begin at 12:30 p.m. A post-launch news conference will be held at 2:45 p.m.
On Friday, July 11, media briefings previewing the mission's science cargo and a prelaunch status from Wallops will be broadcast on NASA TV at 4 p.m. and 5 p.m., respectively.
Media also may join the briefings by phone. To obtain dial-in information, media must contact Rachel Kraft at rachel.h.kraft@nasa.gov mailto:rachel.h.kraft@nasa.gov with their name and media affiliation no later than 30 minutes before the beginning of each briefing.
The public also may ask questions on social media using the hashtag #AskNASA.
The Cygnus will be filled with approximately 3,300 pounds of supplies for the station, including science experiments to expand the research capability of the space station's Expedition 40 crew members aboard the station, crew provisions, spare parts and experiment hardware.
Among the research investigations headed to the orbital laboratory are a flock of nanosatellites designed to take images of Earth, developed by Planet Labs of San Francisco, and a satellite-based investigation called TechEdSat-4 built by NASA's Ames Research Center in Moffett Field, California, which aims to develop technology that eventually will enable small samples to be returned to Earth from the space station. In addition, a host of student experiments are on board as part of the Student Spaceflight Experiment Program, an initiative of the National Center for Earth and Space Science Education and NanoRacks.
This and future commercial cargo resupply flights will ensure a robust national capability to deliver critical science research to orbit, significantly increasing NASA's ability to conduct new science investigations to the only laboratory in microgravity.
If Cygnus launches as scheduled, the spacecraft will arrive at the space station on Tuesday, July 15. Station commander Steven Swanson of NASA and Flight Engineer Alexander Gerst of the European Space Agency will be standing by in the station’s cupola to capture the resupply craft with the station's robotic arm and install it on the Earth-facing port of the station's Harmony module.
NASA TV coverage of capture and installation will begin at 6:15 a.m. on July 15. Grapple is scheduled at approximately 7:24 a.m. Coverage of the installation of Cygnus onto Harmony will begin at 9:30 a.m.
For a full update of media activities and more information on the Orbital-2 mission, visit: http://www.nasa.gov/orbital http://www.nasa.gov/orbital

# 2614. Getting back to normal

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-10 19:01:20 UTC
From: Ron
Topic: 2614  Message: 2614

I have had a busy week. I hope everything returns normal routine.
The XYL is doing fine, my grandaughter's (3 years old) birthday came and went,
I have diverted a possible collision  with the XYL between my presence running the  Net and the birthday party which I plum forgot

The 20 MTR net was a bust. Propagation played a role in that one.
If this space WX continues for 20, I may just cancel the net for summer.
But I believe things will get better.

The 40 mtr and 20 mtr cw net will continue as always on Monday night and Wednesday night.

Have a good weekend!

FB. Sorry I was so brief but I have lots of emails and am short on time.

I just want to add that the AL-80A is my favorite amp of all times.

I like the AL-80B too but don’t feel any of the “improvements” were actually improvements.

I am a firm believer in KISS and the 80B adds a lot of (IMO) unnecessary complexity.

I have no plans of replacing my SB-1000 ever. As backup I also have an original AL-80A which I bought new back in about 1987.

But I have ALWAYS had proper time sequence keying. Built my own time sequence keyer back in 1979 which added a fixed pre-dit delay of 25ms and has a rheostat adjustable post-dit (hang time) delay. The amps live longer that way!

https://us-mg5.mail.yahoo.com/neo/launch?.rand=fj7ou1n6rodbq#
This was sent to me by one of the TEN-TEC Family and DVRA W2ZQ Members who is out that way.
Nice Demo for girls and boys and everybody else that stops in.
We need more places for hands on and show and tell for Ten-Tec and Amatuer Radio too.
Maybe a setup in a old Railroad Station or a Club House near you would do nicely.
Think about won't you and keep your eyes open for a place that you could do it too.
Telegraph, Ham Radio, Radio, and TEN-TEC are perfect together.
I took a Telegraph Key and a Sounder and made some HO telegraph poles with some little leds, hooked them
up to a battery and presto, fire in the wire that's glows, hihi.
Then a small laptop so they could see the code on the screen.
No hookup needed, just use Multipsk and just turn the mike on the laptop to copy the code for both
sending and receiving. That was easy.
73,
Lloyd N2KPC NCS RNCS PR

Today at 3:23 PM
Hi Lloyd,

I've found a museum in Ann Arbor that has a HAM radio station. The
station call is WA2HOM. I'm going up there on Sunday and I'll try to
check in to the Ten Tec net from there.

Check out this video here: http://youtu.be/XKh0-ATvcD0 http://youtu.be/XKh0-ATvcD0. I think you'll
recognize the radio they are using.

I also think Nederland will win, but not because they are the better team.

Brasil has had some tough breaks and seem to be in a slump.

What we saw the other day was not the Brazilian team.

I also think Nederland will win, but not because they are the better team.

Brasil has had some tough breaks and seem to be in a slump.

What we saw the other day was not the Brazilian team.

I could not believe that Brazil lost by that many points. It seems as if they

didn’t want to be there.

I like Netherland, their style of playing keep the opponents on their toes.

Oh well, as we speak it’s lest than 4 hrs to game time (Brazil/Netherlands).

The Sunday Germany/Argentina game should be a good one.

After that .... one game left .....

Gaye and I will be at Sussex Sunday. I make not be able to get back in time for the TENTEC Nets.
K3UR John see who might be able to pick up the 10 meter net in case I can't get back in time.
I am at the DVRS Shack now in West Trenton.
Looking forward to seeing several of the TEN-TEC Family at the Sussex County Hamfest.
I will have the EAGLE, Omni 7, and the Rebel with the USB 712 data interface and a Regal 707 Desk Mike of course on display.
K2DRN Dave, KC2TKD Frank, KB2YOA Gaye and many others will be there from the TEN-TEC Group and the W2ZQ DVRA Club and stop by if you can.
My Truck in in the shop so look for the 83 Ford sedan and the TEN-TEC Signs.
We are redoing the coax system and dipoles as we speak.
73,
Lloyd N2KPC NCS NCS

John, Tony and Lloyd,

I am in the process of moving and started yesterday. Antennas are down and my Orion has been moved already. Furniture from our storage unit is moving tomorrow and from the house on Tuesday. I have no date in mind as to when I will back on the air. As soon as we are settled I have a couple of new antennas to construct and get up. My plans right now do not include installing another tower and huge beam. I am limited on my climbing. I have the space as I am going from 1 acre to 5 so there is room for an antenna farm! We are only moving about 10 miles across town but I have 40 years of accumulation to move. I was in the country when I built here and the city moved in around me. Getting back to the country once again and I hope far enough out the city won't come out to me again. For the 2 Tennessee Net Control stations checking in on the TenTec nets, I be back on 3980 as well, Wade & John.

W3TS MIKE PA

VE3DWI TONY ON

W2DD GEORGE NJ

KO8S KARL MI

KA9FTM SAM IN

N3LPJ LEE PA

W3LI ANDY PA

The band was very poor. I did hear some stations barely above the noise.
I copied one letter then sent that letter with question mark, several times.
Stations braved the “propagation gods” landed “in the log”.
(smile)

See you all on Wednesday night. Let’s hope for better band conditions on 20 meters.

BTW, thank you Tony (VE3DWI) for manning the 20 mtr net last week.

Tonight on 14063 at 23:30 Z (7:30 Eastern time)

REVIEW

This is a casual but controlled net. Slow speed ops are welcome. Speed limit

is 13 wpm. Please, no speeders! (smile)

Whether you are learning CW or experienced, the purpose of this net is to promote

CW activity and have fun doing so. (contacts count towards Ten Tec certificates)

The protocols are as follows:

For those not familiar, NCS is net control station; QNI? means check in now.

QNB means relay. Use this if u hear a station NCS cannot hear.

AS (sent together) means STANDBY.

When do I ck in?

After u hear QNI, and only then; send the last two letters of ur call. NCS will acknowledge by repeating ur last two letters of your call. Please give others a chance to sign in, and help to reduce doubling, tripling etc. After accumulating a small list, NCS will then call stations from the list. When you hear your letters, you then send ur FULL call and exchange: CALL, NAME, STATE, RST, RADIO. (does NOT have to be Ten Tec radio)

Please send your call again when finished to ensure I have ur call correct. Propagation can vary week to week. It can be enough to get it wrong.

When to relay: After a contact has completed.

Example:

You send QNB followed by ur call; I send ur call, QNB K. You then proceed to contact that station, gather info. When completed, you again send QNB followed by ur call. I send ur call followed by K. You then proceed to relay that info.

Following the above suggestions will help us run a smooth net.

K5LN BILL TX 55N

The only station I cud copy.
He was 339 here.

I was able to hear sumthing, just picking out single letter
here and there. I tried for 15 minutes to copy anyone.,
Bill is the lone op to log tonight. (through that horrible noise)

Will see you all nx Monday night 40 meter net.

May everyone be dried out from that crappy front that also passed through here in New England.

with all the "no copy" reporting from the Wednesday Night 20M CW net I don't feel so bad today.

I copied Ron maybe 2x2 to on my 160M OCF Dipole and about the same but with a little higher noise level on my DX Engineering 43ft. vertical. And the same report for some others attempting to check in.

May the propagation gods look favorably upon this activity in the future.

you may want to reset your browser.
Or, you back up the bookmarks in a separate file the delete the browser and reinstall again.
It appears to be some app that is attached to your app. (little buggers).

Ron wb1hga

# 2669. sunspot number dropped to zero.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-19 04:01:57 UTC
From: n2kpc@...
Topic: 2669 Message: 2669

SUNSPOT NUMBER DROPS TO ZERO: Solar activity is very low. July 17th brought the first spotless day in nearly three years. The face of the sun was completely blank and the sunspot number dropped to zero. Now, however, two small sunspots are emerging, circled in this image from NASA's Solar Dynamics Observatory:
http://sohowww.nascom.nasa.gov/data/realtime/hmi_igr/1024/latest.html
Neither of these small spots has the kind of complex magnetic field that harbors energy for strong flares. The quiet is therefore expected to continue through the weekend. NOAA forecasters estimate the odds of an M-flare in the next 3 days to be no more than 1%.
Before July 17, 2014, the previous spotless day was August 14, 2011, a gap of nearly 3 years. What happened then provides context for what is happening today. Overall, 2011 was a year of relatively high solar activity with multiple X-flares; the spotless sun was just a temporary intermission. 2014 will probably be remembered the same way. As new sunspots emerge and grow, the Solar Max of 2014
http://science.nasa.gov/science-news/science-at-nasa/2014/10jun_solarminimax/ will pick up where it left off a couple weeks ago when sunspots
http://spaceweathergallery.com/indiv_upload.php?upload_id=99262 were
http://spaceweathergallery.com/indiv_upload.php?upload_id=99158 abundant
http://spaceweathergallery.com/indiv_upload.php?upload_id=99229. However, because no one can predict the solar cycle, this "All Quiet Event" is worth monitoring.
Follow the action, or lack thereof, on Twitter @spaceweatherman
https://twitter.com/spaceweatherman.
Realtime Space Weather Photo Gallery http://spaceweathergallery.com/
NOCTILUCENT vs. TROPOSPHERIC CLOUDS: Floating more than 80 km above Earth's surface, electric-blue NLCs
http://science.nasa.gov/science-news/science-at-nasa/2012/07aug_meteorsmoke/ are our planet's highest clouds. As a result, it is easy for lower clouds to get in the way of their easy visbility. Last night in Sweden, P-M Hedén recorded the contest between the two. Play the video to see how, in the end, the NLCs won out:
http://vimeo.com/101077253
"Dark clouds passed overhead at midnight, but behind those clouds I could see bright electric ones - the beautiful Noctilucent clouds!" says Hedén.
His video highlights the altitude difference between ordinary clouds in the troposphere
http://en.wikipedia.org/wiki/Troposphere and noctilucent clouds in the mesosphere
http://en.wikipedia.org/wiki/Mesosphere. At 80+ km, NLCs are high enough to catch the rays of the sun even around midnight. At 5 to 10 km, tropospheric clouds are midnight dark.
The natural habitat of noctilucent clouds is the Arctic Circle. In recent years, however, they have spread to lower latitudes with sightings as far south as Utah and Colorado. Many researchers think this is a result of climate change. Observing tips: Look west 30 to 60 minutes after sunset when the Sun has dipped 6o to 16o below the horizon
http://www.spaceweather.com/nlcs/geometry.gif. If you see blue-white tendrils zig-zagging across the sky, you may have spotted a noctilucent cloud.
Realtime NLC Photo Gallery http://spaceweathergallery.com/nlc_gallery.html
ROSETTA COMET IS A CONTACT BINARY: The European Space Agency's Rosetta probe is approaching Comet 67P/Churyumov-Gerasimenko for a historic mission to orbit and land on the comet's nucleus. As Rosetta approaches the comet (now less than 10,000 km away), the form of the

nucleus is coming into focus
http://sci.esa.int/rosetta/54353-the-dual-personality-of-comet-67pc-g/. And it is strange:
http://sci.esa.int/rosetta/54356-rotating-view-of-comet-67pc-g-on-14-july-2014/
Some observers have noted the comet's resemblance to a rubber duck. The technical term is "contact binary." One elongated object appears stuck to a smaller bulbous piece. No one knows how the comet came to be this way. It could be the result of a slow-motion "sticky collision" between two objects, an odd-shaped fragment of a catastrophic impact, or something else entirely. One thing is sure: This could present some interesting challenges for Philae, the probe's lander, which is slated to touch down on the comet's surface in early November.
Many questions will be answered by August 6th when Rosetta reaches 67P and goes into orbit. Stay tuned http://sci.esa.int/rosetta/!

Ten Tekkies;

Because the conditions were awful during our 20 meter CW net, I MAY temporary cancel the net until conditions improve

(think positive).

I will be monitoring day to day and gather solar wx reports up to Wednesday and post “go”, or “no go” at that time.

The 40 meter CW net will continue as scheduled.

I provided a link below for your perusal.

C U THERE

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 7:30PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.
C U THERE,
LLOYD N2KPC NCS RNCS PR

I have a suggestion and would like to see one of the backup Net Control stations to pick up the various nets when Lloyd, Ron, Tony or myself are unable to run the nets.

If this happens, it would be good to post this here, so arrangements can be made for another person to run the net.

This is only a suggestion and if anybody has any alternative ideas, please feel free to post them here. Thank you.

# 2678. TEN-TEC TEN METER NET HAD 19 Checkins today

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-21 01:37:02 UTC
From: n2kpc@...
Topic: 2678  Message: 2678

The SFI was only 87 so a big Thank You for the4 relays from outside NJ.
19 Checkins NJ-11, PA-3, KS-2, NY-2, IL-1.
Thank's to W3LI, Andy my co-host for being there thru thick and thin.
I miss all of you who did not have propagation today.
Hopefully we have some Sunspots soon.
PA, KS and IL called for relays too, but as you know propagation was not there.
I know that many tried and thank you once again.
73,
Lloyd N2KPC NCS RNCS PR

Ron,

I watched a documentary about sprites. They are mostly associated with thunder storm activities and appear to move up-wards into the ionosphere. They were in a jet plane at 45000 feet and used very high speed cameras which recorded hundreds, if not thousands, of frames per second so they could play them back in VERY slow motion. It was an awesome program.

73, Tony VE3DWI.

Roger,

Tie a string around your finger. Of course, you have to remember what the string is for and that can be a challenge in itself.

Tony VE3DWI.

I have a friend that lives in hard times. He has very little income, No car and he has Bone Cancer, lives alone, has no Air Cond or Heat in his house. He is 61 years old and now has to walk with a cane. His 2 Meter rig is on the blink.

So I ask, does anyone have a 2 Meter rig to donate or sale for cheap?

You may contact me direct @ ki8du1@juno.com

Thank You

Roger / KI8DU in WV

July 25, 2014

RELEASE 14-201

NASA’s Mars Spacecraft Maneuvers to Prepare for Close Comet Flyby

http://www.nasa.gov/sites/default/files/main_sidingspring_version07b-01_2.png

This graphic depicts the orbit of comet C/2013 A1 Siding Spring as it swings around the sun in 2014. On Oct. 19, the comet will have a very close pass at Mars. Its nucleus will miss Mars by about 82,000 miles (132,000 kilometers).

Image Credit:
NASA/JPL-Caltech

NASA is taking steps to protect its Mars orbiters, while preserving opportunities to gather valuable scientific data, as Comet C/2013 A1 Siding Spring heads toward a close flyby of Mars on Oct. 19.
The comet’s nucleus will miss Mars by about 82,000 miles (132,000 kilometers), shedding material hurtling at about 35 miles (56 kilometers) per second, relative to Mars and Mars-orbiting spacecraft. At that velocity, even the smallest particle -- estimated to be about one-fiftieth of an inch (half a millimeter) across -- could cause significant damage to a spacecraft.
NASA currently operates two Mars orbiters, with a third on its way and expected to arrive in Martian orbit just a month before the comet flyby. Teams operating the orbiters plan to have all spacecraft positioned on the opposite side of the Red Planet when the comet is most likely to pass by.
"Three expert teams have modeled this comet for NASA and provided forecasts for its flyby of Mars," explained Rich Zurek, chief scientist for the Mars Exploration Program at NASA's Jet Propulsion Laboratory (JPL) in Pasadena, California. "The hazard is not an impact of the comet nucleus, but the trail of debris coming from it. Using constraints provided by Earth-based observations, the modeling results indicate that the hazard is not as great as first anticipated. Mars will be right at the edge of the debris cloud, so it might encounter some of the particles -- or it might not."
During the day's events, the smallest distance between Siding Spring's nucleus and Mars will be less than one-tenth the distance of any known previous Earthly comet flyby. The period of greatest risk to orbiting spacecraft will start about 90 minutes later and last about 20 minutes, when Mars will come closest to the center of the widening dust trail from the nucleus.
NASA's Mars Reconnaissance Orbiter (MRO) made one orbit-adjustment maneuver on July 2 as part of the process of repositioning the spacecraft for the Oct. 19 event. An additional maneuver is planned for Aug. 27. The team operating NASA's Mars Odyssey orbiter is planning a similar maneuver on Aug. 5 to put that spacecraft on track to be in the right place at the right time, as well.
NASA's Mars Atmosphere and Volatile Evolution (MAVEN) spacecraft is on its way to the Red Planet and will enter orbit on Sept. 21. The MAVEN team is planning to conduct a

precautionary maneuver on Oct. 9, prior to the start of the mission's main science phase in early November.
In the days before and after the comet's flyby, NASA will study the comet by taking advantage of how close it comes to Mars. Researchers plan to use several instruments on the Mars orbiters to study the nucleus, the coma surrounding the nucleus, and the tail of Siding Spring, as well as the possible effects on the Martian atmosphere. This particular comet has never before entered the inner solar system, so it will provide a fresh source of clues to our solar system's earliest days.
MAVEN will study gases coming off the comet's nucleus into its coma as it is warmed by the sun. MAVEN also will look for effects the comet flyby may have on the planet’s upper atmosphere and observe the comet as it travels through the solar wind.
Odyssey will study thermal and spectral properties of the comet's coma and tail. MRO will monitor Mars’ atmosphere for possible temperature increases and cloud formation, as well as changes in electron density at high altitudes. The MRO team also plans to study gases in the comet’s coma. Along with other MRO observations, the team anticipates this event will yield detailed views of the comet’s nucleus and potentially reveal its rotation rate and surface features.
Mars' atmosphere, though much thinner than Earth's, is thick enough that NASA does not anticipate any hazard to the Opportunity and Curiosity rovers on the planet's surface, even if dust particles from the comet hit the atmosphere and form into meteors. Rover cameras may be used to observe the comet before the flyby, and to monitor the atmosphere for meteors while the comet's dust trail is closest to the planet.
Observations from Earth-based and space telescopes provided data used for modeling to make predictions about Siding Spring's Mars flyby, which were in turn used for planning protective maneuvers. The three modeling teams were headed by researchers at the University of Maryland in College Park, the Planetary Science Institute in Tucson, Arizona, and JPL.
For more information about the Mars flyby of comet Siding Spring, visit:
http://mars.nasa.gov/comets/sidingspring/ http://mars.nasa.gov/comets/sidingspring/

# 2701. Just how are things at Tentec?

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-26 12:20:48 UTC
From: Bob McGraw - K4TAX
Topic: 2701  Message: 2701

Like most of you, my mailbox is frequently loaded with comments about the Mega Sale, when orders were received, when they were acknowledged and then the ultimate, when the new radio was shipped and then received. I'll admit, some of these e-mails originate as questions about a new radio and come to me privately. That's OK too. I'm a Tentec Ambassador and consider it my role and privilege to assist others.

I've looked back through my collection of e-mails received and have been amazed at the numbers. Now folks, we all know that business is business and with any business the numbers are always held close to the table. I don't have an OUIJA board for projections. Small company production and procurement is always a challenging managerial balancing act. Component lead time procurement can easily get to be several weeks if not months. This means if the parts aren't in house today it may be several weeks before production can begin or be completed. One component short and there is a non-shippable unit.

What's further amazing it seems that Tentec is shipping radios every day. They are successfully dealing with the huge influx of orders. Based on e-mails that I see, the orders still seem to be coming in {"I ordered mine today"} and radios are still being shipped {"I received mine today"} . Yet as orders are received, parts must be ordered and paid for. And then the merchandise does not get billed until the product ships. Talk about cash flow concerns, yep they must be huge while running with some 8 to 12 week backlog. Yet, radios are get shipped every day. I'm not at all implying that one can order a radio today or tomorrow and expect it next week. The latest e-mails seems to indicated the backlog of orders is in the 8 to 12 week time period.

I did some math, some projections, and applied the famous economic SWAG factor. My speculation is that the MEGA SALE event will likely produce more shipped products during the month of July than likely occurred during 2013. That's simply amazing as I know how many questions I received in 2013 and how many I've received during July this year alone. What's next? Well the MEGA SALE pricing ends July 31st and that's only 6 days. Based on a projected order rate and delivery cycle, not knowing what was in finished goods inventory at the beginning, it is easy to project that there could be more units shipped in 2014 than in the past 10 years. Huh, you say. Perhaps an overly optimistic speculation on my part. Could be true as the actual orders, confirmations and "my new radio is to ships today" types of communications pass along the data waves.

Now where am I going with all of this? As a Tentec Ambassador it is my role and my pleasure to assist any of you with any questions you may have, be they before you place your order, you may need suggestions on configuration or maybe just operating guidelines. I am here along with the other Ambassadors to assist. You are welcome to post on the reflector or to my personal e-mail. I'll try to answer each one in a timely manner.

Now back to my radios, I have QSO's to make.

73
Bob, K4TAX

P.S. -- I'll send this individually to several lists. Pardon if you may receive it more than once.

DISCLOSURE:
This is to inform all persons, I am a Tentec Ambassador and I receive compensation according to the Tentec Ambassador program. In addition, I serve as a volunteer beta test person to Tentec for the Omni VII, Eagle and Argonaut VI radios. I hold no employment relationship, no financial interests nor do I conduct any commercial business, direct or indirect, with Tentec.

# 2719. Sunday nets

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-28 02:10:54 UTC
From: Tony Lelieveld
Topic: 2719  Message: 2719

Hi all,

The band was a little rough with much QSB and QRN from Thunder Storms in the area. On 40 mtr we had 46 check-ins and on 20 mtr we had 58. All in all not bad. A big thank you to Ted N8TJE for helping pulling out the weak ones I couldn't hear.

There was one station I may have had wrong as I can't find any reference to it. I logged KA4HJT Ray GA FT897. He was check-in #31 on the 40 mtr band. If you see this Ray let me know if it needs correction. Thanks all.

73, Tony VE3DWI.

# 2720. Re: Fw: [TenTec] Where is TEN-TEC today?

Well Done John Henry.
I hope you compile all of these writers cramping responses into a book that will sell well and give a true accounting of the right way to run a company, deal with customers, do a fair balancing act between all.
Thank God for the TEN-TEC Family which is the TEN-TEC Nets, TEN-TEC Staff from Jim Wharton down to all the people who support the Amatuer Radio Community who care about the good old United States of America .
Lets not forget our Friends in Canada and other lands that support the TEN-TEC Family too.
Take a bow John Henry because I would buy that book that we all hope you will compile soon.
Now back to thinking what will be the next ideal HF TEN-TEC Radio.
I think I will just stick to thinking of a new name for the future TEN-TEC HF RADIO and leave the driving to someone else to build it.

Oh buy the way, Thank's to John, K3UR for forwarding the posting.

73,
Lloyd N2KPC PR

Hi Roger,
I had come to the same conclusion and mentioned this to John too. Especially since I could not the find KA4HJT on the web at all. Thanks for your diligence though.

The subject sez it all, the freq is 7063 @7:30 Eastern time (0130 Z).

Please zero beat to my signal. Please maintain cw speeds up to 13 WPM.
(no speeding)

If you cannot be copy, send QSB. Someone will help relay you to me.

Also, if I send a ? after a letter or two, it means please repeat your call,
I did not get all. (some folks send once, and never reply agn)

I do not like to leave anyone out. Thus relays are important tool in nets.

“See” you there,

# 2729. TenTec mega sale

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-29 03:52:43 UTC
From: eggman69_us@...
Topic: 2729  Message: 2729

I ordered a Eagle back on 7/10 with some extra filters and some other goodies. I was told that there was already a 12 week back log. I was wondering if anyone else took advantage of this great sale? What did you order? Has anyone received their rigs yet that ordered one? How long did Stan tell you your backlog would be? This will be my 3rd TenTec rig. My corsair 560 is a great rig and my main rig right now. I also own a Tritan IV 540. I have yet to get it on the air kind of a work in slow process.

Solar Dynamics Observatory Captures Images of Lunar Transit

On July 26, 2014, from 10:57 a.m. to 11:42 a.m. EDT, the moon crossed between NASA’s Solar Dynamics Observatory (SDO) and the sun, a phenomenon called a lunar transit. A lunar transit happens approximately twice a year, causing a partial solar eclipse that can only be seen from SDO's point of view. Images of the eclipse show a crisp lunar horizon, because the moon has no atmosphere that would distort light. This image shows the blended result of two SDO wavelengths - one in 304 wavelength and another in 171 wavelength.

# 2736. August nights—the 11th, 12th and 13th. These a re the dates of the annual Perseid meteor shower

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-07-30 01:32:22 UTC
From: n2kpc@...
Topic: 2736  Message: 2736

July 28, 2014: Every year, sky watchers and summertime campers circle on their calendars a few key August nights—the 11th, 12th and 13th. These are the dates of the annual Perseid meteor shower, which rarely fails to please those who see it.
This year they're adding a note: "supermoon."

During the second week of August, the biggest and brightest full Moon of the year will face off against everyone's favorite meteor shower—and the outcome could be beautiful.

https://www.youtube.com/watch?v=JkKzMAzT5fs&feature=youtu.be A new ScienceCast video previews the competition between the supermoon of August and the 2014 Perseid meteor shower. Play it

The source of the Perseid meteor shower is Comet Swift Tuttle. Every 133 years the huge comet swings through the inner solar system and leaves behind a trail of dust and grit. When Earth passes through the debris zone, specks of comet-stuff hit the atmosphere at 140,000 mph and disintegrate in flashes of light. These meteors are called Perseids because they fly out of the constellation Perseus.

In a normal year, dark-sky observers typically count more than 100 Perseids per hour. But this is no normal year.

http://science.nasa.gov/mailing-lists/subscribe/

On August 10, 2014, just as the Perseids are set to peak, the Moon will become full. Moreover, it will become full just as it reaches the place in its orbit (perigee) that is closest to Earth. The perigee full Moon of August 10th –also known as a supermoon– will be as much as 14% closer and 30% brighter than other full Moons of the year.

"This is bad news for the Perseids," says Bill Cooke of NASA's Meteoroid Environment Office. "Lunar glare wipes out the black-velvety backdrop required to see faint meteors, and sharply reduces counts."

But there's good news, too.

http://science.nasa.gov/media/medialibrary/2013/07/26/histogram.gif Since 2008, the Perseids have produced more fireballs than any other annual meteor shower. The Geminids are a close second. See the data

The debris stream of Comet Swift-Tuttle is broad, and it is possible to see Perseids as early as late July, well before the Moon becomes full.

Also, notes Cooke, "the Perseids are rich in fireballs as bright as Jupiter or Venus. These will be visible in spite of the glare."

Using a network of meteor cameras distributed across the USA, Cooke's team has been tracking fireball activity since 2008, and they have built up a database of hundreds of

events to analyze. Their data show the Perseids are the undisputed 'fireball champion' of annual meteor showers. "We see more fireballs from Swift-Tuttle than any other parent comet," he says.

A warm summer night, a moonlit landscape, and an occasional fireball cutting past a supermoon: that's an ensemble with a special beauty all its own. Enjoy the show.

Karl,

Sorry to see that you did not make it into the 20 mtr net last Sunday. Don't feel discouraged if nobody picks up your request for a relay. I had this happen in the past as well. There could be various reasons for it. No1 is propagation. No 2, stations coming in booming at your location could be running lots of power too, even though you ran a KW. No 3, propagation is not always reciprocal. No 4, some stations leave the frequency as soon as they have checked in.
I guess persistence and patience may do the trick but not always. When I ask for check-ins and start calling in stations some do not come back for whatever reason. For example this afternoon we had very poor propagation to some areas and it took 6 to 7 calls to get all the info. This may account for why, sometimes, we get the call-sign wrong even after numerous tries. I hope you have better luck next time.

73, Tony VE3DWI.

Hi all,
The July 30th 20 mtr TenTec SSB net had 29 stations checked in. Conditions were not very good and a lot of repeats were asked for. However with the help of Ted N8TJE we managed pretty good. Thanks Ted. We even had a Spanish station operating mobile from Wisconsin checking in. Radio models were from Ten-Tec, Icom, Kenwood, Yaesu, Elecraft and Heathkit.

If UR thinking about a new TEN-TEC tomorrow is the last day for the MEGA SALE 7-31-2014.
Argonaut VI, Omni 7 or a Eagle would look mighty fine in your kids New Shack.
Would look mighty fine in your Shack too, or boat, RV, Mobile, backpack, summer get away, picnic table in the shade, UR local Lodge, Fire or EMS Station, ARES/RACES Site, Church, Boy Scouts, YMCA or maybe a Ham of any age that needs a HF Rig who can't afford any HF RADIO.
I just gave a TEN-TEC HF you a new Ham who need and loves HF but can not afford one.
That Radio was willed to me by W2SAD SK, Harry in Mt.Holly, NJ.
Harry was 96 years young and his TEN-TECS will live on with his good wishes for many years to come.
UR turn. Look around you.
Remember U only have until tomorrow Thursday 7-31-2014

New NASA Research Shows Giant Asteroids Battered Early Earth

July 30, 2014

http://www.nasa.gov/sites/default/files/highres0250_0.jpg

An artistic conception of the early Earth, showing a surface pummeled by large impact, resulting in extrusion of deep seated magma onto the surface. At the same time, distal portion of the surface could have retained liquid water.

Image Credit:
Simone Marchi

New research shows that more than four billion years ago the surface of Earth was heavily reprocessed – or melted, mixed, and buried – as a result of giant asteroid impacts. A new terrestrial bombardment model, calibrated using existing lunar and terrestrial data, sheds light on the role asteroid collisions played in the evolution of the uppermost layers of the early Earth during the geologic eon called the "Hadean" (approximately 4 to 4.5 billion years ago).
An international team of researchers from academic and government institutions, including NASA's Solar System Exploration Research Virtual Institute (SSERVI) at NASA's Ames Research Center in Moffett Field, California, published their findings in a paper, "Widespread Mixing and Burial of Earth's Hadean Crust by Asteroid Impacts" in the July 31, 2014 issue of Nature.
"A large asteroid impact could have buried a substantial amount of Earth's crust with impact-generated melt," said Yvonne Pendleton, SSERVI Director at Ames. "This new model helps explain how repeated asteroid impacts may have buried Earth's earliest and oldest rocks."
Terrestrial planet formation models indicate Earth went through a sequence of major growth phases: initially accretion of planetesimals – planetary embryos – over many tens of millions of years, then a giant impact by a large proto-planet that led to the formation of our moon, followed by the late bombardment when giant asteroids several tens to hundreds of miles in size periodically hit ancient Earth, dwarfing the one that killed the dinosaurs (estimated to be six miles in size) only 65 million years ago.
Researchers estimate accretion during the late bombardment contributed less than one percent of Earth's present-day mass, but the giant asteroid impacts still had a profound effect on the geological evolution of early Earth. Prior to four billion years ago Earth was resurfaced over and over by voluminous impact-generated melt. Furthermore, large collisions as late as about four billion years ago may have repeatedly boiled away existing oceans into steamy atmospheres. Despite the heavy bombardment, the findings are compatible

with the claim of liquid water on Earth's surface as early as about 4.3 billion years ago based on geochemical data.
The new research reveals that asteroidal collisions not only severely altered the geology of the Hadean eon Earth, but likely also played a major role in the subsequent evolution of life on Earth as well.
"Prior to approximately four billion years ago, no large region of Earth's surface could have survived untouched by impacts and their effects," said Simone Marchi, SSERVI senior researcher at the Southwest Research Institute in Boulder, Colorado, and the paper's lead author. "The new picture of the Hadean Earth emerging from this work has important implications for its habitability."

http://www.nasa.gov/sites/default/files/fig2.png

Spatial distribution and sizes of craters formed on the early Earth. Each circle indicates the final estimated crater size. Color-coding indicates the time of impact.

Image Credit:
Simone Marchi et al. 2014

Large impacts had particularly severe effects on existing ecosystems. Researchers found that on average, Hadean Earth more than four billion years ago could have been hit by one to four impactors that were more than 600 miles wide and capable of global sterilization, and by three to seven impactors more than 300 miles wide and capable of global ocean vaporization.
"During that time, the lag between major collisions was long enough to allow intervals of more clement conditions, at least on a local scale," said Marchi. "Any life emerging during the Hadean eon likely needed to be resistant to high temperatures, and could have survived such a violent period in Earth’s history by thriving in niches deep underground or in the ocean’s crust.”
The research was an international effort led by Marchi and William Bottke from the Southwest Research Institute in Boulder; Linda Elkins-Tanton from Carnegie Institution for Science in Washington; Michael Bierhaus and Kai Wünnemann from the Museum fur Naturkunde in Berlin, Germany; Alessandro Morbidelli from Observatoire de la Côte d'Azur in Nice, France, and David Kring from the Universities Space Research Association and Lunar and Planetary Institute in Houston.
The research was supported in part by SSERVI, a virtual institute that, with international partnerships, brings science and exploration researchers together in a collaborative virtual setting. SSERVI is funded by the Science Mission Directorate and Human Exploration and Operations Mission Directorate at NASA Headquarters in Washington.
For more information about SSERVI and selected member teams, visit:
http://sservi.nasa.gov/ http://sservi.nasa.gov/

Bet this was good for meteor scatter, HiHi.

New NASA Research Shows Giant Asteroids Battered Early Earth

July 30, 2014

(http://www.nasa.gov/sites/default/files/highres0250_0.jpg)

An artistic conception of the early Earth, showing a surface pummeled by large impact, resulting in extrusion of deep seated magma onto the surface. At the same time, distal portion of the surface could have retained liquid water.

Image Credit:?

Simone Marchi

?

New research shows that more than four billion years ago the surface of Earth was heavily reprocessed – or melted, mixed, and buried – as a result of giant asteroid impacts. A new terrestrial bombardment model, calibrated using existing lunar and terrestrial data, sheds light on the role asteroid collisions played in the evolution of the uppermost layers of the early Earth during the geologic eon called the "Hadean" (approximately 4 to 4.5 billion years ago).

An international team of researchers from academic and government institutions, including NASA's Solar System Exploration Research Virtual Institute (SSERVI) at NASA's Ames Research Center in Moffett Field, California, published their findings in a paper, "Widespread Mixing and Burial of Earth's Hadean Crust by Asteroid Impacts" in the July 31, 2014 issue of Nature.

"A large asteroid impact could have buried a substantial amount of Earth's crust with impact-generated melt," said Yvonne Pendleton, SSERVI Director at Ames. "This new model helps explain how repeated asteroid impacts may have buried Earth's earliest and oldest rocks."

Terrestrial planet formation models indicate Earth went through a sequence of major growth phases: initially accretion of planetesimals – planetary embryos – over many tens of millions of years, then a giant impact by a large proto-planet that led to the formation of our moon, followed by the late bombardment when giant asteroids several tens to hundreds of miles in size periodically hit ancient Earth, dwarfing the one that killed the dinosaurs (estimated to be six miles in size) only 65 million years ago.

Researchers estimate accretion during the late bombardment contributed less than one percent of Earth's present-day mass, but the giant asteroid impacts still had a profound effect on the geological evolution of early Earth. Prior to four billion years ago Earth was resurfaced over and over by voluminous impact-generated melt. Furthermore, large collisions as late as about four billion years ago may have repeatedly boiled away existing oceans into steamy atmospheres. Despite the heavy bombardment, the findings are compatible with the claim of liquid water on Earth's surface as early as about 4.3 billion years ago based on geochemical data.

The new research reveals that asteroidal collisions not only severely altered the geology of the Hadean eon Earth, but likely also played a major role in the subsequent evolution of life on Earth as well.

"Prior to approximately four billion years ago, no large region of Earth's surface could have survived untouched by impacts and their effects," said Simone Marchi, SSERVI senior researcher at the Southwest Research Institute in Boulder, Colorado, and the paper's lead author. "The new picture of the Hadean Earth emerging from this work has important implications for its habitability."

(http://www.nasa.gov/sites/default/files/fig2.png)

Spatial distribution and sizes of craters formed on the early Earth. Each circle indicates the final estimated crater size. Color-coding indicates the time of impact.

Image Credit:?

Simone Marchi et al. 2014

?
Large impacts had particularly severe effects on existing ecosystems. Researchers found that on average, Hadean Earth more than four billion years ago could have been hit by one to four impactors that were more than 600 miles wide and capable of global sterilization, and by three to seven impactors more than 300 miles wide and capable of global ocean vaporization.

"During that time, the lag between major collisions was long enough to allow intervals of more clement conditions, at least on a local scale," said Marchi. "Any life emerging during the Hadean eon likely needed to be resistant to high temperatures, and could have survived such a violent period in Earth’s history by thriving in niches deep underground or in the ocean’s crust.”

The research was an international effort led by Marchi and William Bottke from the Southwest Research Institute in Boulder; Linda Elkins-Tanton from Carnegie Institution for Science in Washington; Michael Bierhaus and Kai Wünnemann from the Museum fur Naturkunde in Berlin, Germany; Alessandro Morbidelli from Observatoire de la Côte d'Azur in Nice, France, and David Kring from the Universities Space Research Association and Lunar and Planetary Institute in Houston.

The research was supported in part by SSERVI, a virtual institute that, with international partnerships, brings science and exploration researchers together in a collaborative virtual setting. SSERVI is funded by the Science Mission Directorate and Human Exploration and Operations Mission Directorate at NASA Headquarters in Washington.

For more information about SSERVI and selected member teams, visit:
http://sservi.nasa.gov/

Bet this was good for meteor scatter, HiHi.
73,
Lloyd N2KPC

Band condx were terrible last night. I could barely hear Ron, Sigs were coming and going. I did manage to get one Rely in.

I heard LI and was hoping to get him relayed in but by that time I had totally lost Ron. Sorry Andy.

Iberian Peninsula at Night

ISS040-E-081320 (26 July 2014) --- One of the Expedition 40 crew members aboard the International Space Station recorded this early evening photo of the entire Iberian Peninsula (Spain, Portugal and Andorra) on July 26, 2014. Part of France can be seen at the top of the image and the Strait of Gibraltar is visible at bottom, with a very small portion of Morocco visible near the lower right
Enjoy, 73, Lloyd N2KPC

# 2760. TEN-TEC NETS Tomorrow Sunday 8-3-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-02 12:38:48 UTC
From: n2kpc@...
Topic: 2760  Message: 2760

Welcome,
==========
Please take note that Tony VE3DWI in Canada will be filling in as Net Control for John K3UR Sunday on the TEN-TEC 40 and 20 Meter Nets.
I will join him after I finish the TEN-TEC 10 Meter SSB Net on 40 and 20 Meters.
==========

C U THERE

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control.

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
Tony VE3DWI IS NET CONTROL FOR TODAY.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
TONY VE3DWI IS NET CONTROL FOR TODAY.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 7:30PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

C U THERE,
LLOYD N2KPC NCS RNCS PR

# 2761. Propagation good for 10 meters

http://www.hamqsl.com/solar.html

SFI 168 with a A-INDEX is 10 and K-INDEX is 2.

Good for the 10 Meter Net, But going to be tough on 40 and 20 meters.

So try to give Tony VE3DWI a hand with Relays Sunday on the 40 and 20 meter nets.

The 10 Meter Net Propagation should be good.

Lloyd,

Try pointing the beam ENE for us guys up here in New England. I've tried many Sundays to check into the 10 meter net without success. I've worked hams in central NJ in the past on 10 meters, so I hope to be able to make it. I'm sitting at 98 check-ins so who knows, it might be # 100.

73,
Bill
K1FPV

Topic: 2713  Message: 2764

Hi fellows. Got moved to the new QTH. Hope to be joining the nets again very soon. Anyone can drop by anytime and help me get a couple of antennas up. ☐. My normal helper had already planed on a month long caping trip out west. Hopefully get back on the air before he gets back. ☐

# 2765. TEN-TEC Nets Today Sunday 8-3-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-03 11:08:03 UTC
From: n2kpc@...
Topic: 2765  Message: 2765

Welcome,
==========
Please take note that Tony VE3DWI in Canada will be filling in as Net Control for John K3UR today Sunday 8-3-2014 on the TEN-TEC 40 and 20 Meter Nets.
I will join him after I finish the TEN-TEC 10 Meter SSB Net on 40 and 20 Meters.
==========

C U THERE

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control.

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
Tony VE3DWI IS NET CONTROL FOR TODAY.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
TONY VE3DWI IS NET CONTROL FOR TODAY.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 7:30PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.

C U THERE,
LLOYD N2KPC NCS RNCS PR

# 2777. RELAYS TODAY AND TONY VE3DWI

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-04 01:07:27 UTC
From: n2kpc@...
Topic: 2777  Message: 2777

1ST Tony did a great job today in a worked hard for the checins because of propagation.
It was not easy and don't I know it, HiHi.
The Relays made the Net totals possible today on 10, 40 and 20 meters.
I had local stations here in NJ who are normal S-8 that I could not copy at all on ground wave today.
The band was out to the North, Northwest and East on ten meters.
On 40 it was really bad here in NJ and the Relaying Station did 95 percent of my checkins on 40 meter.
20 meters was only a little better.
So I wish to thank the relays for stepping up to the plate for the Net Controls.
That was the nice Birthday Present of all.
73,
Lloyd N2KPC NCS RNCS PR

# 2778. TEN-TEC 10 METER SSB NET HAD 18 CHECKINS TODAY

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-04 01:15:33 UTC
From: n2kpc@...
Topic: 2778  Message: 2778

We had 18 Checkins....NJ-12, FL-2, IL-1, SC-1, PA-1, KS-1.
Thank You to all that Relayed.
A lot of people tried but got stuck in the mud, HiHi.
Propagation is what it is.
But, everybody gave it their best shot.
Thank You John, KC2QMA once again for the Live Steaming of the TEN-TEC Nets.
That really came thru today because I could hear people calling thru the Live Steaming in TN that I could not hear in NJ and how cool is that.
Yet another service from John, KC2QMA hard work and time to the TEN-TEC Family.
73,
Lloyd N2KPC NCS RNCS PR

Lloyd, a very happy birthday!

Got my new work truck, 2014 F-150, still working on the install, too much work on the new house to do antennas yet, will get back into the nets when I get things together. Hope you are doing well, may make a trip to NJ in a few weeks. Have an Eagle on order, expecting to see it in Sept.

73 all!
Andy K9ARM

# 2780. Eagles are Hatching in NJ all around me.

From: n2kpc@...
Topic: 2780  Message: 2780

I have be told that a bunch of Eagles in TN on Dolly Parton Parkway are going to give birth soon.
The New Eagles are coming to several Hams that I know in NJ and I am sure that they will be very happy
with them.
Thank You Jim Wharton and Stan Brock along with everybody at TEN-TEC for your hard work and time.

I did not know that Omni 7's could give birth too but darn if they didn't.

The TEN-TEC NETS have had a lot to do with this and it's all your fault. Thank You.

TEN-TEC is alive and well in NJ and PA and the W2ZQ Club Station, DVRA which opens it's doors
to myself and guest not only for the TEN-TEC NETS but to showcase Amatuer Radio as well to all.

Good Grief, I just got a email from K9ARM Andy, he going to be a "father" to a new Eagle soon.
That email came in while I was typing this one, see what I mean, Congrats to Andy.
So there we have it folk and HF explosion.
73,
Lloyd N2KPC NCS RNCS PR

From: Bob McGraw - K4TAX
Topic: 2780  Message: 2781

Lloyd et al;

I ordered my 2nd Eagle on Wednesday the 30th. At the time, it was indicated they had sold 47 radios that day! I presume this number includes all models.

At present my order, being placed mid afternoon on the last day of the July Mega Sale, has a delivery out to late October or early November. I am sure there will be several thousand radios appearing on the air between now and Christmas. Some orders placed in early July have been received and are already on the air.

As to "hard work" well with that many radios having been sold, the hard work now really begins with procurement and manufacturing.

Yes, thank you Jim Wharton, Stan Brock, John Henry, Paul Clinton and others. And a big thanks to Michael and the folks at R F Concepts too.

73
Bob, K4TAX

Hi all,

First a "Happy Birthday" to Lloyd N2KPC and may there be M A N Y more.
On the Sunday 40 mtr net we had 50 stations check in.
On the Sunday 20 mtr net we had 49 stations check in.
Conditions were very rough and many calls had to be coaxed in slowly and carefully. A big thank you to Ted N8TJE, Ralph W8BVH and others who helped relaying stations in.

See Y'all Wednesday on 20 mtr SSB. Hopefully conditions will be better.
73, Tony VE3DWI.

Is anyone here using the Ten Tec 712 USB adapter to connect a Ten Tec radio to their PC to check into the CW net?

If so, what software are you using? That's something I've always been curious to try.

I'm going to try to learn CW and do it the old fashioned way, but until then, I thought this might be a great way to take advantage of the Omni VII capabilities. Any tips would be appreciated.

# 2801. ROCKET LAUNCH PRODUCES NOCTILUCENT CLOUDS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-07 00:56:42 UTC
From: n2kpc@...
Topic: 2801 Message: 2801

Realtime Comet Photo Gallery http://spaceweathergallery.com/comet_gallery.html
ROCKET LAUNCH PRODUCES NOCTILUCENT CLOUDS: On Tuesday morning, August 5th, a SpaceX Falcon 9 rocket lifted off from Cape Canaveral carrying the AsiaSat 8 telecommunications satellite. About an hour and a half after the 4 AM launch, electric-blue clouds appeared over Orlando FL:
http://spaceweathergallery.com/indiv_upload.php?upload_id=100104
"These clouds appeared just before sunrise," says photographer Mike Bartils.
These are, essentially, man-made noctilucent clouds
http://science.nasa.gov/science-news/science-at-nasa/2003/19feb_nlc/ (NLCs). Water vapor in the exhaust of the rocket crystallized in the high atmosphere, creating an icy cloud that turned blue when it was hit by the rays of the morning sun. Years ago, space shuttle launches produced similar displays
http://www.nasa.gov/centers/goddard/news/topstory/2003/0522shuttleshine.html.
Natural NLCs form around Earth's poles when water vapor in the mesosphere
http://en.wikipedia.org/wiki/Mesosphere crystalizes around meteor smoke
http://science.nasa.gov/science-news/science-at-nasa/2012/07aug_meteorsmoke/. Sometimes they spread as far south as Colorado and Utah, but rarely or never Florida. Electric-blue over the Sunshine State requires a rocket launch, and that's what happened today. Browse the realtime photo gallery for more images of the Falcon 9 launch

From: Bob McGraw - K4TAX
Topic: 2795  Message: 2802

Yes, I use the Tentec 712 USB Soundcard interface. The computer is running either Windows XP {sp3} or the laptop is running Vista. Both work equally well. As to software; I use FLDIGI, MixW3, HRD/DM780, WSJT, WSPR and Digipan for my digital modes. All except WSJT and WSPR offer a CW mode.

I usually transmit using my paddle and the internal keyer of the radio, but let the software "copy along". You will find, at least from my experience, if a station is sending by keyboard then the decode result is quite good. However, it the OP is sending by hand, unless he has a really good fist, the decode won't be near as good. To that extent, some of the suggested programs work better at the decode process than others. And of course, static bursts and signal fades will hamper the decode results.

As to running CW, you will find that USB mode on the radio and use MCW as the mode on the software. As long as you keep the speech processor off, the TX AF level such that you do not get into the ALC range, your signal will be very clean.

All of those listed above are either free, or free for a 30 day trial, so I suggest downloading each one and determine which you feel works best for you. And of course there are others that work as well.

73
Bob, K4TAX

Boy, I tell you, the conditions were terrible.
Regardless, 13 of you managed to ck in.
In addition to the poor band condition, I was suddenly
getting S5 noise level. A good thing this happened near the end
of the net. But I could do without it, thank you Mr. Noise.
This greatly affected my receiving ability.

Yes, and u wasn't alone.
I was sure I heard w2dd too, and several others ck in but no joy
When they were called.
Hell, I logged a CA station, but just barely.
To add insult, a S5 noise began wrecking havac to copy anyone.
Today, I am on a hunt to locate and remove that trouble making noise!

I am also giving thought abt relay station. Stay tuned.

Ron,

I tried and tried to checkin, even asked for a relay a few times too but no one picked me up.

Ron you were 449 at the start of the net, then progressively got worse.

I think I heard you call for DU but I couldn't hear you hardly at all, especially during the 2nd half of the net.

Oh well, CU next week.

From: Tony Lelieveld
Topic: 2807  Message: 2811

Ron,

I guess I was not indicating it properly. I posted the net results directly in a message from within the group list server. I was going to attach the TXT file as well but when I clicked on the paper clip above the message header and did not do anything. I will try it again.
73, Tony VE3DWI.

Tony,

I think you need to highlight the file first click copy, then in email, you click the Paper clip it will paste it on.

Hope this helps.

John,

I did send the results yesterday at 16:20 hr. but I guess you did not receive them. I sent them this morning from my BlackBerry and now through the group as an embedded message and attachment. I hope you do get them.

P.S. I don't seem to be able to attach the file. When I click the Paper clip, nothing happens.

73, Tony VE3DWI.

Hi Ron,

I think I heard George W2DD but had to go for supper. Can you please email a detailed procedure how to relay stations? Do I first just send QNB and wait for your reply or send QNB and my call etc.?
73, Tony VE3DWI.

Hell, I was trying to confirm if it indeed was w2dd by sending his call and ?.
Never heard him agn. At this point I cud not confirm.
I asked for QNB several times but no one came back.
I guess each of us was in a deep hole preventing QSO’s.

To answer ur question,
I sometimes put out a “review”.
This contains info abt the cw TT net.

You first send QNB then ur call
I will reply (sometimes I don’t do what I wrote), ur call “K”
you then proceed to gather data. When finished, you again call
QNB your call. I reply by sending ur call “K”.
You then relay what u copied.

I am giving some thought abt relay stations especially what happened last night
(band conditions).
Stay tuned ....

72
Ron, wb1hga

Ron you were 449 at the start of the net, then progressively got worse.

I think I heard you call for DU but I couldn't hear you hardly at all, especially during the 2nd half of the net.

Yes, I copied "DU". But when it came ur turn in que, I got nil.
The band was nasty for sure and that S5 noise on me radio didn't help either.

Hurricanes Iselle and Julio Nearing the Hawaiian Islands

In early August 2014, not one but two hurricanes were headed for the Hawaiian Islands. Storms arriving from the east are a relative rarity, and landfalling storms are also pretty infrequent.
On Aug. 5, the Visible Infrared Imaging Radiometer Suite (VIIRS) sensor on the Suomi National Polar-orbiting Partnership (NPP) satellite captured natural-color images of both Iselle and Hurricane Julio en route to Hawaii. This image is a composite of three satellite passes over the tropical Pacific Ocean in the early afternoon. Note that Iselle’s eyewall had grown less distinct; the storm had descreased to category 2 intensity. The bright shading toward the center-left of the image is sunglint, the reflection of sunlight off the water and directly back at the satellite sensor.

Hi Ron,

I should clarify: there was some QSB, never enough that I couldn't hear you, but when you were up, you were WAY up! Of course, I'm moving in about a month from my GA mountain QTH to the flatlands of central Florida, so we'd better rub elbows *soon*!!!

61 (73 minus a few),

Reed / WW3A

The SFI is only 113, A-index 004, K-index 0
10 Meter Propagation is poor so please lend a hand relaying if you can.
The Geomag Field is inactive.
We will give it our best.

C U THERE

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 7:30PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity.
C U THERE,
LLOYD N2KPC NCS RNCS PR

Date: 2014-08-11 21:39:45 UTC
From: <gandalfthegrey66@...>
Topic: 2840  Message: 2840

tonight at 7:30 Eastern time (23:30 Z).
40 mtrs 7063 +/-

Please try not to QRM by doubling or tripling.
Wait and send agn. I will log you into the call list.
Because we do not know how the band will be, please
help others to ck in by relay (QNB).

There is a 13WPM speed limit. This means send
any speed you are comfortable up to 13 WPM.

Hams wants to learn code we shouldn’t discourage them.
The purpose of this net is to encourage CW activity and
practice rx and sending. The fun is also working by checking
in to the nets and earning Ten Tec certificates.

Yes its time for the Ten Tec. Cw net tonight.
On 14063 7:30 Eastern time (2330 Z).

Please listen before you send last 2 letters of your call.
Doing so will help reduce Doubling or tripling.
If I send a letter follow by ? it means that station send agn.

As we all know, the band has not been stellar of late so
We both need to be on our toes to ensure accuracy.
QSB can make for extra wrk.
I will also rely on QNB (relay) for assistance.

See you there.
Ron wb1hga

Hello all it looks like I will have some time this weekend to go to the Huntsville hamfest I'm just planning on going just for the first day. But if I feel up to it I will stay for the second day.

Does anyone know if TT will be there?
Is anyone from our TT radio group going to be there?

73/KC2QMA

It is my understanding that TENTEC will be in attendance and have a booth at the Huntsville Hamfest. Also John Henry will be speaking on "Understanding and Customizing Arduino Based Transceivers". This seminar will take place in the Madison Room at 1400 on Saturday August 16. The Madison Room is in Embassy Suites across the bridge.

Personally, I will be in attendance on both Saturday and Sunday. I look forward to seeing and meeting many of you.

From: n2kpc@...
Topic: 2849  Message: 2849

https://us-mg5.mail.yahoo.com/neo/launch?.rand=0esve41fqr0oo#
Today at 4:19 PM
Killing Killer Asteroids with Nuclear Explosives
Killing Killer Asteroids with Nuclear Explosives
We've all see Armageddon, but just how real is the threat to humanity from asteroids or other near-Earth objects (NEOs)? According to scientists, it's very real. So real, in fact, that the United Nations Committee on the Peaceful Uses of Outer Space recently created a special action team dedicated to gathering and analyzing data on NEOs http://links.govdelivery.com/track?type=click&enid=ZWFzPTEmbWFpbGluZ2lkPTIwMTQwODEzLjM1MDA2MjgxJm1lc3NhZ2VpZD1NREItUFJELUJVTC0yMDE0MDgxMy4zNTAwNjI4MSZkYXRhYmFzZWlkPTEwMDEmc2VyaWFsPTE3MDI1ODkxJmVtYWlsaWQ9bjJrcGNAYXJybC5uZXQmdXNlcmlkPW4ya3BjQGFycmwubmV0JmZsPSZleHRyYT1NdWx0aXZhcmlhdGVJZD0mJiY=&&&100&&&http://www.space.com/26811-dangerous-asteroid-earth-defense-plan.html and the danger they pose to our planet.
Any NEO greater than a half-mile in diameter can become a deadly threat, and the likelihood is very high that a killer asteroid will eventually find itself on a collision course with Earth. When that day comes, we will need to have a plan. With the help of Los Alamos' Cielo supercomputer – a 1.35 petaflop/s machine built by Cray – Los Alamos astrophysicist Robert Weaver is working on developing one option: using a nuclear explosive to stop a killer asteroid in its tracks.
Click here <http://bit.ly/1stspOO http://links.govdelivery.com/track?type=click&enid=ZWFzPTEmbWFpbGluZ2lkPTIwMTQwODEzLjM1MDA2MjgxJm1lc3NhZ2VpZD1NREItUFJELUJVTC0yMDE0MDgxMy4zNTAwNjI4MSZkYXRhYmFzZWlkPTEwMDEmc2VyaWFsPTE3MDI1ODkxJmVtYWlsaWQ9bjJrcGNAYXJybC5uZXQmdXNlcmlkPW4ya3BjQGFycmwubmV0JmZsPSZleHRyYT1NdWx0aXZhcmlhdGVJZD0mJiY=&&&101&&&http://bit.ly/1stspOO> to watch a video about using Cielo to create a model of the effect of a one-megaton nuclear energy source on the type of asteroid that might some day threaten Earth.

Date: 2014-08-14 14:30:05 UTC
From: race3fan@...
Topic: 2854  Message: 2854

I always thought Ten Tec had the best customer service in ham radio, but I think they have some competition.My Palstar AT-500 that I have used over a year stopped tuning on 160 meters. I called them about my problem, and was transferred to their engineer, Paul.... who just happens to be the Chief Engineer, President, and CEO (and founder) of the company. We talked for several minutes and he explained a lot about the tuner, and what was probably wrong. Something I did no doubt. He suggested I return it for repair.Their factory is in Piqua, Ohio (near Dayton), and a 2+ hour trip from my Indiana QTH. I sent the tuner via standard UPS on Tuesday. It was received at Palstar on Wednesday, and repaired and shipped back on Thursday. On Thursday morning a technician (Candy, I think) called me and explained that she replaced a relay board and did a couple of updates while she was working on it. Total cost was a little over 40 bucks. Palstar has a good American made product, and I was pleasantly surprised by the excellent, personal customer service I received. I wanted to pass my experience along to others here who appreciate American products and good service.

?

I also noticed more Eagles starting to show up. And where are

them Rebels?? I had logged them during the first few weeks.

?

Ron, I4THX gave you a call twice trying to check into the CW net Weds night; guess you did not hear him. After that, I did not hear him anymore. 73, KO8S, Karl

Hello Karl,
Thank you for participating.
Regarding NCS not being able to copy,
In situations like this, you can send (after last qso) “QNB” then ur call.
I will send “QNB K”.

You then attempt to contact that station for relay. After you have all data,
you send “QNB” and ur call.
I will send “ur call “K”.
You then relay your data.
I repeat data for confirmation.
Finis.

Too bad we did not get to log him. That is second week in row I cud
not hear DX. That is why during any net, relay stations are important.

see u on Monday night.

# 2864. Ham Radio Payload to Circle the Moon

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-15 01:44:17 UTC
From: n2kpc@...
Topic: 2864  Message: 2864

Ham Radio Payload to Circle the Moon
A lunar flyby with a ham radio payload transmitting JT65B mode on 145.990 MHz is expected to take place toward the end of this year, giving earthbound radio amateurs the opportunity to receive some otherworldly DX signals as the payload flies around the Moon. China has announced http://news.xinhuanet.com/english/china/2014-08/10/c_133546027.htm plans to launch a lunar orbiter carrying a 14 kg battery-powered payload known as 4M-LXS, which was developed at LuxSpace. Signals from the Amateur Radio payload can be decoded using the free WJST http://physics.princeton.edu/pulsar/K1JT/ software by Joe Taylor, K1JT. The orbiter is one of the test models for Beijing's new lunar probe Chang'e-5, which will land on the moon, collect samples, and return to Earth. The launch, planned for 4th quarter 2014, is aimed at testing technologies that are vital for the success of the spacecraft. The orbiter will be launched into Lunar Transfer Orbit and then perform a lunar flyby before re-entering Earth's atmosphere after 9 days. The orbiter, which arrived by air in Xichang, Sichuan, on Sunday, August 10, has been transported to the Xichang Satellite Launch Center.

From: John Occhipinti
Topic: 2868  Message: 2868

In response to the questions and apprehension about changes being made at TEN-TEC, I can assure you that the TEN-TEC nets are alive and well.

Before anyone declares doomsday for TEN-TEC INC., let us see any official release from Alpha/TEN-TEC about any changes being made. I do not take too much stock in any announcements being made on Facebook, on changes being made by any company.

The TEN-TEC Nets will continue no matter what happens at Alpha/TEN-TEC.

From: <gandalfthegrey66@...>
Topic: 2857  Message: 2869

Ron, the TEN-TEC net results for the 6 nets are being held up, because I have not received the checkin list from you. At this point I do not even know if you had a CW net last night, because you sent me an email yesterday stating that you wanted to cancel the CW nets until next month.

Good morning,

I usually send data the following day.
Depending on my activity (doctor appointment
for one example) determines when I can get the log done.
I sent you the log yesterday. If you have not RX it,
DO LET ME KNOW.

I log everything on paper.
Then I enter that data into the ‘puter.
Then you get it as well as everyone else.
I cannot type on ‘puter and rx same time.
Too distracting.

# 2874. TEN-TEC NETS CONTINUE AS USUAL

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-15 19:05:17 UTC
From: John Occhipinti
Topic: 2874  Message: 2874

I, like most have just learned about Jim Wharton resigning from TEN-TEC. As most know, I started the TEN-TEC nets in April 2012 after several years of no TEN-TEC nets. We started with a 40 meter net and added a 20 meter net several months later.

Then in January 2013, Jim Wharton contacted me about starting a Certificate Program. This has been a very successful program.

I will check with Stan Brock and see if TEN-TEC will continue with the Certificate Program. If not, we will seek other avenues to keep this program going. In the meantime I will keep accurate records and your check-in totals will be retroactive when the program is resumed.

Thank you for your support of the TEN-TEC nets.

Roger,
Yes, I received it too. Indeed Ron's email of Aug. 14 did not have the list of check-ins☐. That's why I indicated it would be nice to have so that we ourselves can compare who made it into the list compared to whom we could hear.

I too have wondered, at times, whether emails got through properly as on occasions I have had to repeatedly send in results before John received it. I guess things are not always perfect hi... hi.

The U.S. Gulf Coast at Night

ISS040-E-090540 (9 Aug. 2014) --- One of the Expedition 40 crew members aboard the International Space Station photographed this nighttime image showing city lights in at least half a dozen southern states from some 225 miles above the home planet. Lights from areas in the Gulf Coast states of Texas, Louisiana, Mississippi and Alabama, as well as some of the states that border them on the north, are visible

The Great OZ , KY4OZ is down there somewhere, I am looking for the Orange Light, I mean Dot. HiHi.

It appears that the reflectors have been active recently with the news of my resignation from TEN-TEC. I have taken a position with Syncro Manufacturing a contract manufacturer and will be their Regional Director, Business Development. This is the industry I was in before I came to TEN-TEC 11 years ago. With the acquisition of TEN-TEC by RF Concepts a lot of positive things have happened here in Sevierville, as many of you know we had a fantastic response to our latest sale, and we are back at Hamfests with Stan and John Henry at Huntsville Hamfest this weekend. Engineering is busy with new ideas. Manufacturing is working very hard acquiring additional material to fill the backlog of radios. We have hired two new people in our production department and are looking for more. The future for RF Concepts looks very bright; the company is and will be a force to be reckoned with.

My decision to leave was entirely my own and a very difficult one to make. TEN-TEC and Alpha are two companies that are made up of lots of great people and one person does not make the company. The two companies are strong and are poised to get stronger. I wish them all the best and will continue to use my Eagle mobile on the nets as I travel the eastern States. I encourage all of you to continue to support both companies as I will and I am sure there will be lots of great products in the future for all of us to enjoy.

# 2898. RE: [ten_tec_radio_net] CW Software

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-18 05:02:23 UTC
From: Ed Drannbauer
Topic: 2795  Message: 2898

Thanks Bob for the reply. I haven’t trip and of the CW programs yet, but was trying PSK 31 using the 712 and the Omni VII with DigiPan other night. It was working great.

However, I try again today, and nothing but issues. The Omni VII will go switch over to TX even though I didn’t transmit anything. It will only stop if I unplug the 712, or turn the rig off.

I’m not sure if the issue is related, I’m now finding that half of the time I can no longer switch between AF and RF, or PBT and BW when I push in the knobs to toggle between the two. They seem to have a mind of their own. I couldn’t hear a contact today because my AF was down and when I tried to turn it up, it wouldn’t change from RF.

Any ideas what might be going on?

Subject: Re: [ten_tec_radio_net] CW Software

□

Yes, I use the Tentec 712 USB Soundcard interface. The computer is running either Windows XP {sp3} or the laptop is running Vista. Both work equally well. As to software; I use FLDIGI, MixW3, HRD/DM780, WSJT, WSPR and Digipan for my digital modes. All except WSJT and WSPR offer a CW mode.

I usually transmit using my paddle and the internal keyer of the radio, but let the software "copy along". You will find, at least from my experience, if a station is sending by keyboard then the decode result is quite good. However, it the OP is sending by hand, unless he has a really good fist, the decode won't be near as good. To that extent, some of the suggested programs work better at the decode process than others. And of course, static bursts and signal fades will hamper the decode results.

As to running CW, you will find that USB mode on the radio and use MCW as the mode on the software. As long as you keep the speech processor off, the TX AF level such that you do not get into the ALC range, your signal will be very clean.

All of those listed above are either free, or free for a 30 day trial, so I suggest downloading each one and determine which you feel works best for you. And of course there are others that work as well.

Is anyone here using the Ten Tec 712 USB adapter to connect a Ten Tec radio to their PC to check into the CW net?

If so, what software are you using? That's something I've always been curious to try.

I'm going to try to learn CW and do it the old fashioned way, but until then, I thought this might be a great way to take advantage of the Omni VII capabilities. Any tips would be appreciated.

I found that to be the case with an earlier version of WSJT. The most current version does not cause this.

Regarding the AF Gain / RF Gain. A MASTER RESET will be required. This could be the result of and erroneous RS-232 command sent to the radio that was not released by the software. I would disconnect the RS-232 port cable at the radio and unplug the 712 USB Soundcard interface from the radio. Then perform the MASTER RESET. Once done, make sure the radio is working correctly before you connect the 712 to the AUX port and before you connect to the RS-232 port. Also, if you are using a USB to RS-232 converter, these have been known to cause issues. Some work better than others, some work and some don't.

In general with programs and CAT control, I've found the "shut down" sequence to be very important. Thus I close the application in the computer, then shut the radio off, shut the radio PS off, then shut the computer off. Depending on your system, computer, applications running and such, you may find a different shut down sequence is required.

Subject: RE: [ten_tec_radio_net] CW Software

Thanks Bob for the reply. I haven't trip and of the CW programs yet, but was trying PSK 31 using the 712 and the Omni VII with DigiPan other night. It was working great.

However, I try again today, and nothing but issues. The Omni VII will go switch over to TX even though I didn't transmit anything. It will only stop if I unplug the 712, or turn the rig off.

I’m not sure if the issue is related, I’m now finding that half of the time I can no longer switch between AF and RF, or PBT and BW when I push in the knobs to toggle between the two. They seem to have a mind of their own. I couldn’t hear a contact today because my AF was down and when I tried to turn it up, it wouldn’t change from RF.

Any ideas what might be going on?

Subject: Re: [ten_tec_radio_net] CW Software

□

Yes, I use the Tentec 712 USB Soundcard interface. The computer is running either Windows XP {sp3} or the laptop is running Vista. Both work equally well. As to software; I use FLDIGI, MixW3, HRD/DM780, WSJT, WSPR and Digipan for my digital modes. All except WSJT and WSPR offer a CW mode.

I usually transmit using my paddle and the internal keyer of the radio, but let the software "copy along". You will find, at least from my experience, if a station is sending by keyboard then the decode result is quite good. However, it the OP is sending by hand, unless he has a really good fist, the decode won't be near as good. To that extent, some of the suggested programs work better at the decode process than others. And of course, static bursts and signal fades will hamper the decode results.

As to running CW, you will find that USB mode on the radio and use MCW as the mode on the software. As long as you keep the speech processor off, the TX AF level such that you do not get into the ALC range, your signal will be very clean.

All of those listed above are either free, or free for a 30 day trial, so I suggest downloading each one and determine which you feel works best for you. And of course there are others that work as well.

Subject: [ten_tec_radio_net] CW Software

Is anyone here using the Ten Tec 712 USB adapter to connect a Ten Tec radio to their PC to check into the CW net?

If so, what software are you using? That's something I've always been curious to try.

I'm going to try to learn CW and do it the old fashioned way, but until then, I thought this might be a great way to take advantage of the Omni VII capabilities. Any tips would be appreciated.

Glad it straightened out for you and there was really no problem. Just the "1"s and "0"s got out of order.

Thanks again. The master reset seems to work. I'll pay more attention to how I'm shutting things down in the future.

Subject: Re: [ten_tec_radio_net] CW Software

□

I found that to be the case with an earlier version of WSJT. The most current version does not cause this.

Regarding the AF Gain / RF Gain. A MASTER RESET will be required. This could be the result of and erroneous RS-232 command sent to the radio that was not released by the software. I would disconnect the RS-232 port cable at the radio and unplug the 712 USB Soundcard interface from the radio. Then perform the MASTER RESET. Once done, make sure the radio is working correctly before you connect the 712 to the AUX port and before you connect to the RS-232 port. Also, if you are using a USB to RS-232 converter, these have been known to cause issues. Some work better than others, some work and some don't.

In general with programs and CAT control, I've found the "shut down" sequence to be very important. Thus I close the application in the computer, then shut the radio off, shut the radio PS off, then shut the computer off. Depending on your system, computer, applications running and such, you may find a different shut down sequence is required.

Andy, I am so sorry that I failed to include you with the other relay stations. You are a very important part of all 6 TEN-TEC nets. Your dedication and faithfulness week after week, month after month and year after year has made the TEN-TEC nets so popular and successful.

Again, I want to express my deep apology to you for neglecting to mention your name and callsign with the other TEN-TEC net relay stations. This was not done intentionally and I want to let you know that you are an integral part of the TEN-TEC nets.

Andy, I have a special connection with you, as I lived in Pennsylvania for 36 years before moving here to Metro Atlanta 16 years ago. I also worked in the Pocono Mountain Area and saw Pocono International Raceway being built in the 1960's.

I look forward to hearing you on the TEN-TEC nets this Sunday and enjoying the excellent work you do with the relays.

Ron,
When I do relays and the Wednesday SSB net, I still☐ log on paper and transfer it to a text file later. I am not a "touch typist" and find the computer a distraction too.

73, Tony VE3DWI.

I drive the club members crazy on FD. All stations are connected via N1MM (or is it NN).
I be doing cw with pencil and paper.

Hell, it takes too long to find the darn letter on keyboard.

Tony, I do the same as you. I list all checkins on a sheet of paper that I have prepared with 4 columns across, from left to right which have the headers of,
CALLSIGN.....FIRST NAME.....LOCATION.....RADIO...

After receiving the list of checkins from the other Net Control Stations, I input all the info from the sheets into the Data Base in the computer.

As I am doing this I am watching for the new Certificate Winners and I document this before printing out the complete Data Base.

Then I staple the checkin sheets to the printed Data Base. I have these copies stored from the first TEN-TEC net that I started in April 2012 all the way up to the present time. I average about 10 hours each week, which includes running the 40 meter and 20 meter SSB Nets on Sunday a doing the paperwork for the Certificate Data Base and sending this to the ten_tec_radio_net Group.

In between all of this, I have a "Senior Moment" from time to time. When this happens, I try all I can to make things right. Everybody must be satisfied.

# 2917. GEOMAGNETIC STORM, AURORAS SEEN FROM SPACE

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-20 19:29:56 UTC
From: n2kpc@...
Topic: 2917  Message: 2917

GEOMAGNETIC STORM, AURORAS SEEN FROM SPACE: A moderate (G2-class http://www.swpc.noaa.gov/NOAAscales/index.html#GeomagneticStorms) geomagnetic storm that erupted following a CME strike on August 19th is subsiding now http://www.swpc.noaa.gov/rt_plots/kp_3d.html. At its peak, the storm sparked auroras around both poles visible from the ground and from space. Astronaut Reid Wiseman took this picture from the window of the International Space Station:
https://twitter.com/astro_reid/status/501867289910992897/photo/1
"Never in my wildest dreams did I imagine this," tweeted Wiseman (@astro_reid https://twitter.com/astro_reid). "Unbelievable."
Around the Arctic Circle where the midnight sun has overwhelmed auroras since Spring, observers caught their first glimpse of Northern Lights in months "At one point a massive corona http://spaceweathergallery.com/indiv_upload.php?upload_id=100755 unfolded just over my head!" reports Alexander Kuznetsov from the Finnish Lapland. "It was a great season opener," added Pekka Hyytinen of Tampere, Finland. "I also caught a lightning strike in one of my photos http://spaceweathergallery.com/indiv_upload.php?upload_id=100759."
Solar wind conditions are unsettled but calming as Earth passes through the wake of the CME. NOAA forecasters estimate a waning 30% to 15% chance of more geomagnetic storms during the next 24 hours. Aurora alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
Realtime Aurora Photo Gallery http://spaceweathergallery.com/aurora_gallery.html
MORNING SHOW CONTINUES: Light pollution? No problem. The morning conjunction of Venus and Jupiter is bright enough to see through the worst urban glare. Jeff Dai sends this picture from metropolitan Chongqing, China:
http://spaceweathergallery.com/indiv_upload.php?upload_id=100762&PHPSESSID=up7p69dcmt47kv5gvjod74ubq1
"I woke up at 5 AM to enjoy this celestial dawn above the cityscape," says Dai. "It was gorgeous."
Dai took the picture on August 20th, two days after Venus and Jupiter were barely 0.2o apart. Many observers have stopped looking now that the planets are separating, but as Dai's photo shows, they are still a beautiful pair. So set your alarm for dawn: the morning show continues. A date of special interest is August 23rd when the crescent Moon joins the planets to form a must-see celestial triangle. A video
https://www.youtube.com/watch?v=yK57BMj2Vj4&feature=youtu.be from NASA previews the meeting.
Realtime Conjunction Photo Gallery http://spaceweathergallery.com/
THE POTENCY OF "WEAK" FLARES: For the past month, the sun has been mostly quiet with only a smattering of C-
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=5qfegi6jv65i74mo35327rbff4
and B-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=5qfegi6jv65i74mo35327rbff4
solar flares. As flares go, these are puny. In fact, when the sun is crackling with flares no stronger than B-class, we often say that "solar activity is very low."
But is it, really? A B-class solar flare packs a bigger punch than is generally supposed. Consider this specimen photographed by Harald Paleske of Weißenfels/ OT Langendorf, Germany, on August 17th:

http://spaceweathergallery.com/indiv_upload.php?upload_id=100537
"This was a B8-class flare in sunspot AR2144," says Paleske. "Despite poor seeing, I was able to capture a high-resolution view of the explosion using my 225mm Unigraph solartelescope."
The violence frozen in these snapshots belies the idea that this was a weak explosion. And indeed it was not. A typical B-class solar flare releases as much energy as 100 million WWII atomic bombs. Only on the sun, which is itself a 1027 ton self-contained nuclear explosion, would such a blast be considered puny.
So the next time you hear that the forecast calls for "low solar activity," remember ... everything is relative. Today's forecast, by the way, calls for low solar activity with only a 10% chance of M-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=5qfegi6jv65i74mo35327rbff4
solar flares.

All Sky Fireball Network Every night, a network of NASA all-sky cameras
http://fireballs.ndc.nasa.gov/ scans the skies above the United States for meteoritic fireballs. Automated software maintained by NASA's Meteoroid Environment Office calculates their orbits, velocity, penetration depth in Earth's atmosphere and many other characteristics. Daily results are presented here on Spaceweather.com.
On Aug. 20, 2014, the network reported 46 fireballs.
(37 sporadics, 4 kappa Cygnids, 4 Perseids, 1 Southern delta Aquariid)
http://spaceweather.com/images2014/20aug14/orbits.gif?PHPSESSID=5qfegi6jv65i74mo35327rbff4
In this diagram of the inner solar system, all of the fireball orbits intersect at a single point--Earth. The orbits are color-coded
http://spaceweather.com/images/colors.gif?PHPSESSID=5qfegi6jv65i74mo35327rbff4 by velocity, from slow (red) to fast (blue). [Larger image http://spaceweather.com/images2014/20aug14/orbits.gif?PHPSESSID=5qfegi6jv65i74mo35327rbff4] [movies http://fireballs.ndc.nasa.gov/20140820.html]

Near Earth Asteroids Potentially Hazardous Asteroids (PHAs
http://neo.jpl.nasa.gov/neo/groups.html) are space rocks larger than approximately 100m that can come closer to Earth than 0.05 AU. None of the known PHAs is on a collision course with our planet, although astronomers are finding new ones
http://www.minorplanetcenter.org/iau/lists/Dangerous.html all the time. On August 20, 2014 there were 1494 potentially hazardous asteroids.

# 2918. Wallops for NASA Hurricane Airborne Mission

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-20 20:08:35 UTC
From: n2kpc@...
Topic: 2918  Message: 2918

August 20, 2014

MEDIA ADVISORY M14-138

Media Day at Wallops for NASA Hurricane Airborne Mission

http://www.nasa.gov/sites/default/files/m14-138_global_hawk_plane_3_0.jpg

Two NASA Global Hawk remotely piloted aircraft will fly over and around hurricanes to study how they form and intensify. The research flights originate from NASA’s Wallops Flight Facility, Virginia.

Image Credit:
NASA

As the Atlantic Ocean's hurricane season hits its peak, media are invited to visit NASA's latest airborne hurricane research mission using remotely piloted aircraft on Thursday, Sept. 11 from 10 a.m. to 1 p.m. EDT, at the agency's Wallops Flight Facility in Virginia. The Hurricane and Severe Storm Sentinel (HS3) mission is flying two NASA instrumented Global Hawk aircraft to investigate how hurricanes in the Atlantic Ocean basin form and change in intensity. The aircraft are capable of flying as high as to 55,000 feet and can stay airborne for 30 hours. This is the third and final year of the HS3 mission.
During the media event, reporters will meet HS3 scientists and pilots and tour the Global Hawks and the aircraft control center. Reporters also will learn about NASA's climate research program and the new technology the agency is using to better understand hurricanes.
Speakers during the media day include:
-- Bill Wrobel, center director, NASA Wallops Flight Facility
-- Jack Kaye, associate director for research, Earth Science Division, NASA Headquarters, Washington
-- Scott Braun, HS3 principal investigator, NASA Goddard Space Flight Center, Greenbelt, Maryland
-- Chris Naftel, Global Hawk project manager, NASA Armstrong Flight Research Center, Edwards, California
-- Robbie Hood, director of NOAA's Unmanned Aircraft Systems Program, Silver Spring, Maryland
To register for this event, reporters must contact Keith Koehler at keith.a.koehler@nasa.gov mailto:keith.a.koehler@nasa.gov. The registration deadline for non-U.S. citizens has passed. The deadline for U.S. citizens is noon, Tuesday, Sept. 9.
The presentation to the media will be streamed online live beginning at 10 a.m. at:
http://www.ustream.tv/channel/nasa-tv-wallops
http://www.ustream.tv/channel/nasa-tv-wallops
Media interested in asking questions during the presentation via telephone may contact Keith Koehler for the call-in telephone number and passcode.

For more information on the HS3 mission, including video and imagery, visit:
HS3 Hurricane Mission http://www.nasa.gov/hs3

http://www.nasa.gov/hs3

HS3 Hurricane Mission http://www.nasa.gov/hs3 NASA.gov brings you the latest images, videos and news from America's space agency. Get the latest updates on NASA missions, watch NASA TV live, and lea...

John at all,

Again conditions were rough with deep QSB. Had to ask some station 5 or 6 times for all the info but managed to get 30 check-ins. DX for the day was Graham M0CGL from England who had just put up a new (A3S) antenna and I was his first contact with it. I can sure notice the difference now I am using a Heatkit SB-200 linear putting out about 5-600 Watt. Stations can hear me better than I can them. So... it was fun and here is the list.

73 es C U all on 20 mtr CW tonight. Tony, VE3DWI.

Wednesday AUG-20-2014 20 mtr TEN-TEC SSB net.

Tony, thanks for getting me checked in today. I was on the road between Nashville & Huntsville. Your signal would go from S9 to S0 and back during the net. I heard 4 or 5 others checking in.Got the new truck wired over the weekend, this was my first trip with HF radio in about a month. The new F-150 is nearly twice as big as the Ranger (more ground plane), same setup, same antenna mounting, works very well. Looking forward to getting the Eagle soon.

Might try some Hamsticks on a tripod at home, no antennas there yet.

Got a trip to Alpena, MI planned for next week, not too far from you, Tony.

Andy,

Good to hear from you. Conditions were weird with very long deep QSB fades. I hope you don't have to pay for the gas on the F-150 hi...hi. Nice that you are back on the band again. Alpena, MI is 95 miles as a crow flies across Lake Huron to my QTH. Save travels.

73, Tony VE3DWI.

Tony, thanks for getting me checked in today. I was on the road between Nashville & Huntsville. Your signal would go from S9 to S0 and back during the net. I heard 4 or 5 others checking in.Got the new truck wired over the weekend, this was my first trip with HF radio in about a month. The new F-150 is nearly twice as big as the Ranger (more ground plane), same setup, same antenna mounting, works very well. Looking forward to getting the Eagle soon.

Might try some Hamsticks on a tripod at home, no antennas there yet.

Got a trip to Alpena, MI planned for next week, not too far from you, Tony.

73, Andy K9ARM

Space Weather News for August 22, 2014
http://spaceweather.com http://spaceweather.com/

SOLAR ACTIVITY: Solar activity has been low for weeks. A new sunspot turning toward Earth could change that. AR2149 announced itself on August 21st with a M3-class solar flare that sent waves of ionization coursing through Earth's upper atmosphere. The active region appears capable of more eruptions in the days ahead. Visit http://spaceweather.com http://spaceweather.com/for updates.

Space Weather News for August 24, 2014http://spaceweather.com http://spaceweather.com/

MAGNIFICENT SOLAR FLARE: A visually beautiful solar flare erupted from the east limb of the sun today. Extreme UV radiation briefly ionized the upper layers of Earth's atmosphere; otherwise, our planet was not in the line of fire. The responsible sunspot will turn toward Earth in the days ahead, boosting chances for geoeffective solar activity as the week unfolds. Visit http://spaceweather.com http://spaceweather.com/for photos and more information.

DID YOU MISS THE FLARE? Next time get a phone call. Solar flare alerts are available from http://spaceweathertext.com http://spaceweathertext.com/(text) and http://spaceweatherphone.com http://spaceweatherphone.com/(voice).

The Ten Tec cw net at 730 standard time (0130 Z).
On 14063+/-
Pease send last 2 letters of your call when I send "QNI ?"".
When I send "QNB ?" I am looking for any relays.
Also,
Please do not send over 13 wpm.
This net is to encourage others to learn and practice cw.
Also to provide cw activity.
Please, no break neck speeds.
Those wishing to log in at slower speeds, go right ahead.
Do not feel intimidated cause you send slow.
Everyone invited, even non Ten Tec radio owners!

See u tonight

Hi all,

Again conditions were VERY poor but with the help of Paul WA0BAG and Rich N0ENO we managed to get some real weak ones. Thanks guys. There was a mobile, which I suspect was Andy K9ARM, but nobody could copy him to get him in the log, sorry Andy. The only MI station, KO8S, was relayed in, I blieve, by Rich N0ENO. Thanks all for checking in to the net.

73, Tony VE3DWI.

# 2956. Net changes

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-08-28 19:44:56 UTC
From: Ron
Topic: 2956  Message: 2956

Hello
I have been busy thus my late starting the net.
Towards this end, I reconsider time starting needs to be changed.

Beginning this coming Monday, the 40 mtr net will commence at 8PM
Eastern time (0200 Z).

Since 20 meters has not done well, we are going cancel that net until
Propogation improves.
I will run it if you guys don't mind doing Wednesday net on 40.

Email ur thoughts

Ron, I understand your frustration with net time an propagation. Because of the transition at TEN-TEC, I do not want to upset the applecart at this time. The net times and frequencies have to remain as they are. If you are unable to do the CW nets at these times and frequencies, we can have someone fill in for you until you are able to resume.

The net times and frequencies are posted on the TEN-TEC Website and now that Jim Wharton has left, I will find out who will take the responsibility to make the changes for your CW nets. Thank you for your support.

Good idea! 7:30 was always a bit tight on my side to making the net time.

I like the 40 meter idea for wednesday evenings if that works for you and everyone else.

BTW, I do appreciate your leadership for CW nets. When I get the chance to tune it, it's always nice to know someone has accepted net control whether it's you or another OP.

73,
Dave / K8QH

Topic: 2956  Message: 2962

While I agree that times and bands need to be most likely adjusted seasonally to accommodate effective propagation, I also support the role of the Net Manager in maintaining procedures, order and consistency. With all due respect to the various net control station, and they are hard to come by, I don't view it just the prerogative of the NCS to change times and bands or frequencies without prior approval of the Net Manager. Frequencies may need a slight adjustment due to potential QRM issues with other stations at the specific net time.

Perhaps as we've moved along with the Ten-Tec nets over the past couple of years, it is time for a review of net times, modes and bands.

Bob, thank you for your input. As I previously stated, Jim Wharton was available to me anytime we needed to make any changes. Jim is no longer working for TEN-TEC and when I find out who will be in charge of the Official TEN-TEC Website, I will be able to make any changes In net times and frequencies.

Until this transition is finalized, we must keep net times and frequencies in place, as not to confuse people.

Hi Bob,
It has very nicely been made clear that is not the prerogative of the NCS to change times and bands or frequencies without prior approval of the Net Manager. Frequencies may need a slight adjustment due to potential QRM issues with other stations at the specific net time as you have stated correctly.
We as Net Control Stations are to get permission from the Net Manager well before any changes are made and the Net Manger has to be on the same page with TEN-TEC in order that Everybody knows what the TEN-TEC Net times and Frequencies are well in advance so the checkins are not left out in the cold not knowing that a change has taken place.
I get over 100 emails a month from future Hams, new Hams, Boy Scouts, TEN-TEC Fans and TEN-TEC Family checkins and DX Stations too.
The look at the TEN-TEC Web Site for the times and frequencies for the TEN-TEC Nets.

When I had many new Hams ask about a TEN-TEC Ten Meter SSB Net I asked John, K3UR the Net Manager first what he thought of the idea and would it conflict with any future plans that He might be thinking about that perhaps another Hams had suggested to him that I would not know about.

K3UR, John said that my 10 Meter SSB Net would run in to the 40 Meter SSB Net at 1:30 PM and We talked about it and He said if it was ok by me it was ok by him.
I said that the New Hams that are Tecks and the DX would on be able to check in to the TEN-TEC 10 Meter SSB Net because they are not able to use the forty meter band.
So K3UR, John the TEN-TEC NET MANAGER check with JIM Wharton and it was posted on the TEN-TEC Web Site and all the ducks were in order, on the same pond, and each duck knew what the other duck was doing and they all knew what frequency, time and date to quack on.
This is how it should be done to keep everybody quacking together on the same page and give TEN-TEC a chance to have all of the ducks in a row too let alone the UNDER PAID OVER WORKED TEN-TEC NET MANAGER WHO HAS TO KEEP ALL THE QUACKERS from pulling their feathers out of each other and themselves, stopping their LARGE WEBBED FEET about the floor in fuss-tra-tion, and can't follow simple flock rules to keep the flocks from bumping into one another.
Quacking is good but you need to go thru the Head Quack.
Keep on quacking,
73,
Lloyd N2KPC NCS RNCS PR Man for John, K3UR and all of you in the TEN-TEC Family.

C U There

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 7:30PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 7:30PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity

Date: 2014-09-01 00:30:53 UTC
From: k9arm1@...
Topic: 2979  Message: 2979

I took a few pics of the mobile install and posted them in the photo section. Still a work in progress, this is my work vehicle, antenna is Tarheel 100 with 30" whip and homebrew caphat of 14 ga antenna wire. Grounding is 90% done, all the major body panels in the back near the antenna are strapped with 1/2" braid. Radio mount is a RAM no drill laptop mount and adjusted to put the rig controls at hand with arm on the armrest. Current radio is FT-857D, Eagle is on order and should fit nicely on the mount. I'll take some better pics when I get time with better lighting and background.

Congrats to Lloyd for his promotion. He is always very helpful and usually has a great signal here in the midwest. 59+ on 20 mtrs this afternoon.

And thanks to John and all the relays!

73, Andy K9ARM

# 2980. HAM BALLOON CIRCUMNAVIGATRES EARTH

Yahoo group: ten_tec_radio_net (2007 — 2014)

Topic: 2980  Message: 2980

HAM BALLOON CIRCUMNAVIGATRES EARTH

British radio amateur Leo Bodnar, M0XER, recently launched several solar powered balloons that have managed to circumnavigate the globe. The most interesting of these appears to be B 64 as we hear from Amateur Radio Newsline’s Heather Embee, KB3TZD:

--

B-64 carrying an 11 gram transmitter payload, was launched from Silverstone in the UK on July 12th and it's still flying. It completed its first circumnavigation of the Northern Hemisphere on July 31 and its second complete trip on or about August 21st. When last reported it was on is third round the world trip over northern Russia heading towed the Arctic Circle at an altitude of about 40,000 feet above mean sea level.

B-64 transmits 10 milliwatt signal on 434.500 MHz signing M0XER dash 4 and using the data modes Contestia 64/1000 and APRS. In designing the balloons payload, Bodnar has utilized some clever techniques including the storage of up to 5 days of positions when the balloon is out of radio contact. It later transmits a log file of its previous locations in the comments field of the APRS packet when ground acquisition is re-established. This enables a fairly complete path to be built up.

Like all od Bodnar’s floaters, B-64 is a plastic foil party balloon that flies between 25,000 and 45,000 feet as carried by winds aloft. When looked at on an APRS tracking map if you see only a straight line on the track it means that it is currently out of radio contact.

For the Amateur Radio Newsline, Im Heather Embee, KB3TZD.

Hi Andy,
Thank You for sharing the nice mobile photos today.
I works wonderful and you put a great signal into the TEN-TEC Nets today, nice job Andy.
Some of the new Hams to note to the setup in your truck and are going to go mobile as well with a TEN-TEC Eagle soon.
A couple of them can't have a home base setup so they will be work the nets from their mobiles too.

Band condx were fairly good last night. I heard everyone. Nothing like the 40 meter Band.

Going forward, the intent of this Post is about Checking in to the Net.

Guys, we need to understand when to NOT to send your Callsigns.

At the Net startup, NCS takes his first list of QNI's, Then proceeds to start at the top of that list. Once he has gone through his initial list he will THEN begin to Call for more Checkins. Thats the time to sends your suffix.

Too many people just jump in at any given time ( even with there full Callsign ) and disrupt the Net, to only cause confusion.

Some of the Stations whom are Regulars to the Net should know better than to send out there entire Callsign. Course there are some nubs to the Nets that don't know the Protocol and is to be expected. Maybe some of the Regulars do not Subscribe to the yahoo Groups and never have seen the entire Protocol ( just assuming ).

In final, if you don't make the first list...just be patient and await for NSC to start calling for more Checkins.. So there is a time when, and when to not Send your SUFFIX.

If you would like to gain CW Net experience, Tune to 7123 Mhz Daily @ 9 AM...7 days a week and QNI to the (CW) Sunrise Net (SRN) or at least, take a listen http://qsl.net/srn/ http://qsl.net/srn/. If you do take a listen, you will see the proper way to get on the NCS list. There you will hear no..confusiion.Plus they would love to have you to checkin, BTW NCS will slow down to your Speed.

Ron,
I have no problem with the late start time. Conditions were great here last night. I was running the old Scout off a battery to get the cobwebs out. Count me in to change the 20 meter nets to 40 meters. I can hardly ever hear the nets on 20 and usually don't get a relay. I've never heard the 10 meter net. Must be in the "donut hole".

73,

Steve K9DY

Subject: [ten_tec_radio_net] TEN-TEC NETS ALIVE AND WELL

I trust everyone had a very restful Labor Day yesterday. Plans are in the works for some new enhancements to the TEN-TEC nets. As soon as the Alpha/TEN-TEC merger is complete along with the new TEN-TEC facility, I will be able to get the approval for the new net enhancements and any time and frequency changes that will benefit the Group.

At this point I do not want to interfere with the transition taking place and our 6 nets will continue as is advertised on the Official TEN-TEC Website.

It has been a hecktic day today, as my wife Rose and I are celebrating our 53rd Wedding Anniversary and we just drove my younger son Jeremy to the Atlanta Airport, where is is boarding his flight to Milan, Italy, where he will be starting his new school teaching position. Jeremy taught school in Bangkok for 4 years and also in Saudi Arabia for 4 years.

My daughter Michele is also a school teacher and my oldest son Jeffrey has a Degree in Criminal Justice and owns his own corporation.

I want to thank all of the members of our 6 TEN-TEC nets and also the Net Control Stations and the many Relay Stations for your support and dedication to our great hobby.

An Astronaut's View from Space

NASA astronaut Reid Wiseman tweeted this photo from the International Space Station on Tuesday morning, Sept. 2, 2014. "My favorite views from #space – just past #sunrise over the ocean," the Expedition 40 astronaut tweeted.
The Expedition 40 crew has been busy aboard the Space Station, recently performing health checks and humanoid robot upgrades. In the meantime, a trio of orbital residents is packing up gear as they prepare to return home in less than two weeks. Commander Steve Swanson powered down and stowed Robonaut 2 after wrapping up its mobility upgrades this week. He installed new legs on the humanoid robot including external and internal gear as well as cables. This sets the stage for more upgrades in the fall before Robonaut takes its first steps as an assistant crew member. Robonaut was designed to enhance crew productivity and safety while also aiding people on Earth with physical disabilities.

ARLS006 73 on 73 Award Period Now Underway

Paul Stoetzer, N8HM, is sponsoring a new award for contacts made via the UK Amateur Radio Educational Satellite FUNcube-1 (AO-73) to promote activity on the satellite. It is called the 73 on 73 award. The award period began on September 1.

More information on FUNCUBE may be found on the web at, http://funcube.org.uk/ http://funcube.org.uk/.

Requirements are simple: Work 73 different stations on AO-73 (SSB or CW). There are no geographic restrictions on operating location, no QSLs are required, and the award is free.

E-mail log extracts containing the call sign of each station worked and the date/time (UTC) of each contact to, n8hm@arrl.net. mailto:n8hm@arrl.net. Include your mailing address.

The AO-73 inverting transponder uplink is 435.150-435.130 MHz (LSB). The downlink is 145.950-145.970 MHz (USB). Use no more than 5 W to a 7 dBi gain antenna when accessing the AO-73 transponder.

Hi all,

Conditions were somewhat better than last week and, with some relays from Sonny KD4AR and Rich N0ENO, we managed to get the stations from MI and OH. All in all 30 check-ins some of which were mobile or portable. Thanks guys. C U on CW tonight with Ron WB1HGA as Net Control at 19:30 hr. on 14.063 MHz.

73, Tony VE3DWI.

Wednesday SEP-03-2014 20 mtr TEN-TEC SSB net.

Ron, WB1HGA

Strange conditions Ron. Initially you were just above the noise and as your paddle gave in and you went to a hand key and contacted Karl KO8S your sigs went all of a sudden to S-9+. After I checked in your sigs dropped down in the mud. Did you change anything at all, more power or a different radio? I couldn't believe my ears as to how strong you were for a while.

73, Tony VE3DWI.

Well the Wait is on! It is time to retire my venerable Kenwood TS-450S. It has served me well but the Specs on the eagle have blown me away. And with all of the positive comments, and you tube videos of this radio, no more convincing was required. I'll use the radio mostly chasing IOTA stations around the world and will also use it to activate some IOTA's here in the USA. 12 weeks seems like a long time, But it will be one heck of a Christmas Present. I changed nothing but the paddles to key.
I am going to inspect my wire antenna (dipole) today (Friday) in preparation for winter (boo) season.
I also suspect a ground loop issue and need to check and test that too.
Then,
I want to move to a warmer climate after my wife retires (2 plus yrs to go).

-------- Original Message --------
Subject: TT Hamfest Announcement
From: Bob McGraw - K4TAX <RMcGraw@Blomand.net>
Sent: 11:23, Thursday, September 4, 2014
To: John Occhipinti <k3ur@att.net>
CC: John;

It might be well if you and the other net controls made mention of the fact "there will be no TENTEC Hamfest this year".  It would normally be the 26th and 27th of this month.

I know the announcement was made by Jim Wharton earlier this year, but some may not have gotten it or have forgotten about it.  As you are likely aware, I did post the announcement on the Omni VII, Eagle and Argonaut reflectors as well as the Tentec Contesting com reflector.  I tried to cover all bases.  Yet, I'm sure there may likely be some folks show up, not knowing.

Since Jim Wharton left and since the new Marketing Manager only stayed a few weeks {yep I was told he left shortly after being hired} , the communications to the masses has been non-existent.  John Henry does post occasionally.

I'd expect with the massive number of orders generated in July and the facility move on the near horizon, perhaps this month, things must be pretty hectic in the place.  Glad I'm 125 miles away.

73

Bob, K4TAX

# 3010. AURORA WATCH: On Sept. 6th

ASTEROID FLYBY: On Sunday, Sept. 7th, a house-sized asteroid named "2014 RC" will fly through the Earth-Moon system approximately 40,000 km from our planet. At closest approach, the space rock will be almost inside the orbit of Earth's geosynchronous satellites. Amateur astronomers, especially those in the southern hemisphere, may be able to observe the flyby. Check http://spaceweather.com http://spaceweather.com/for more information.

SFI-157 A-18, K-2 Looking much better for 10 Meters, give it a try.

C U There http://www.hamqsl.com/solar.html

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 8:00PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity

73,
Lloyd N2KPC NCS RNCS PR ANM

# 3016. 10 meters looking good for Sunday 9-7-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-06 23:10:21 UTC
From: n2kpc@...
Topic: 3016  Message: 3016

Sunday is looking good with out any thunderstorms and much cooler, it's 92 now with the thunderstorms moving thru NJ.
If you haven't gotten thru because of propagation give it try tomorrow.
I will be running a Force 12 14 element tri-bander yagi on 10 meters and 20 meters.
Then a 2 element 40 meter Yagi stacked above it on 40 meters.
The DX is good right now on 10 meters too.

If your a NEW HAM give it a try, I will let everybody know where I am pointing the beam.
If you don't hear us wait for the Yagi antenna to beam towards you.
I be on the TEN-TEC 10 Meter SSB Net from 1:00PM until 2:00PM looking for checkins.

Also it should be good for the DX checkins too.
If you know a New Ham bring him or her along too.
Bring a kid and show them Amatuer Radio and start them on a new path in life.
Kids are always welcome and please put them on the air and that a great thing to do.
Lets see how many new people we can get.
C U there.

73,
Lloyd N2KPC NCS TEN-TEC 10 Meter Net.

# 3022. Lucky Me My Wife loves TEN-TEC and Amatuer Radio

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-07 02:35:31 UTC
From: n2kpc@...
Topic: 3022  Message: 3022

KB2YOA, Gaye my Wife just said to me as I am writing this email this email when I told her that she reached 200 checkins, " Just as long as TEN-TEC gets top billing", Thank You TEN-TEC, Jim Wharton, Stan Brock and John Occhipinti.

I Thank Her for all of the support she has given to me and all of the hard work and a great deal of her time to promote TEN-TEC and the TEN-TEC Nets and the TEN-TEC Family.

She tells every Ham that she meets about TEN-TEC, TEN-TEC Radios and the great times with the TEN-TEC people she has meet face to face and on the air.

When I asked her where she would like to go for vacation this year her first choice was to go to the TEN-TEC Hamfest, what more could a husband ask for. Hopefully that will take place in 2015, God willing.
Oh Yeah, she Bowhunts, hunts and is a good shot, guts her own deer, rabbits, ducks and hopefully not ME.
Surf fishing fresh water fishing , Flyfishing too.

This is not fanfair, its the truth, lucky me, Amen.
73,
Lloyd N2KPC

# 3023. TEN-TEC Nets Today Sunday 9-7-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-07 09:29:10 UTC
From: n2kpc@...
Topic: 3023  Message: 3023

SFI- INDEX is 157, A-INDEX is 009, K-index is 3.

Geomag Field Unsettled. 40-poor, 20-fair, 10-good.

So if you can help John, K3UR with Relays on 40 meters, please do and I will join him

as soon as I finish the 10 meter net at 2:00PM. Then I will join him on 20 meters when

I finish the 40 meter net like I always do. Thank You in advance.

http://www.hamqsl.com/solar.html

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 8:00PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change
frequencies, as not to interfere with other Amateur Radio activity

73,
Lloyd N2KPC NCS RNCS PR ANM

This is brief reminder about the Ten Tec Cw net.
We meet every Monday nights at 8.00 Eastern time (0200 Z).
On 7063
And every Wednesday night on 14.063 at 8.00 Eastern time (0200 Z).

PLEASE zero beat my signal. PLEASE when I QNI, pause b4 sending last
2 letters of ur call. This helps avoid doubling etc.
Do know I will qni again to build another list.

EXCHANGE:
CALL NAME QTH RADIO RST

PLEASE send at speed u ar comfortable, I will match ur. Speed.
Send between 5 to 13 wpm. NO SPEEDERS.

72
Ron wb1hga
TT CW NCS

BTW: this is my third attempt posting this since 130 pm

Hello Ron, u changed the order of chk in info. Did u mean to do that???? Was call, name, state,radio. Do u still want RST in there?
No problem for me just checking. Probably will not hear u anyway.

Andy, W3LI

Really, Really need some relay stations to put out calls for those of us here in the upper midwest who are too close to copy you direct. Hear strong signals from East Coast down to FLA and even TX but can just barely hear you on direct. Need some relay help or I just have to give up on the Wed. net.

# 3040. WEDNESDAY 20 METER SSB NET

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-09 14:51:52 UTC
From: John Occhipinti
Topic: 2310  Message: 3040

This is to inform you that Ted N8TJE, will be taking over as Net Control for the next 3 Wednesday's, while Tony VE3DWI is away on vacation.

The TEN-TEC 20 meter SSB net starts at 2PM EDT on 14.325. Please support Ted. Thank you.

John D. Occhipinti, K3UR

Hi guys, not being very familiar with yahoo I went looking around the page for something to click on.
No problem Ron, things happen. Good net last night, Tnx.

Got a Question for the group...Could a strong Solar Flare
cause RFI in the shack.Just about 40 minutes before the start
of the net I started to warm up my rig and all I got was RFI I tried
different antennas and no luck,I was starting to panic as it was my first
net as net control and just about 5 minutes before the net
the RFI went away any one have any thoughts about this.

From the ARRL Facebook feed:

EARTH-DIRECTED X-FLARE AND CME: Sunspot AR2158 erupted on Sept. 10th at 17:46 UTC, producing an X1.6-class solar flare. A flash of ultraviolet radiation from the explosion ionized the upper layers of Earth's atmosphere, disturbing HF radio communications for more than an hour. More importantly, the explosion hurled a CME directly toward Earth and it is forecast to arrive by this weekend with the potential for extensive auroras and major disruptions to the HF bands.

So yeah, looks like it definitely was a strong flare. Looks like this weekend might be rough too.

Flying Through an Aurora

European Space Agency astronaut Alexander Gerst posted this photograph taken from the International Space Station to social media
https://twitter.com/Astro_Alex/status/505282945272524800 on Aug. 29, 2014, writing, "words can't describe how it feels flying through an #aurora. I wouldn't even know where to begin…."
Crewmembers on the space station photograph the Earth
http://www.nasa.gov/mission_pages/station/research/experiments/86.html from their unique point of view located 200 miles above the surface. Photographs record how the planet is changing over time, from human-caused changes like urban growth and reservoir construction, to natural dynamic events such as hurricanes, floods and volcanic eruptions. Crewmembers have been photographing Earth from space since the early Mercury missions beginning in 1961. The continuous images taken from the space station ensure this record remains unbroken.
On Tuesday, Sept. 9 aboard the space station http://www.nasa.gov/content/station-trio-prepares-for-departure-as-long-term-science-continues/, cosmonaut Max Suraev of Roscosmos takes the helm when Expedition 40 Commander Steve Swanson hands over control during a Change of Command Ceremony at 5:15 p.m. EDT. Suraev will lead Expedition 41 and stay in orbit until November with Gerst and NASA astronaut Reid Wiseman. Soyuz Commander Alexander Skvortsov, Swanson and Flight Engineer Oleg Artemyev will complete their mission Wednesday, Sept. 10 at 7:01 p.m. when they undock in their Soyuz TMA-12M spacecraft from the Poisk docking compartment for a parachute-assisted landing on the steppe of Kazakhstan a little less than 3.5 hours later.

Space Weather News for Sept. 10, 2014
http://spaceweather.com http://spaceweather.com/

X-FLARE: Active sunspot AR2158 erupted on Sept. 10th, producing a strong X1.6-class solar flare. Because the sunspot is directly facing Earth, this is a geoeffective event. HF radio blackouts and other communications disturbances have already been observed on the day-lit side of Earth. Stay tuned to http://spaceweather.com http://spaceweather.com/for more information and updates about the possibility of an Earth-directed CME and geomagnetic storms in the days ahead.

DON'T MISS THE STORM: Aurora alerts are available from http://spaceweathertext.com http://spaceweathertext.com/(text) and http://spaceweatherphone.com http://spaceweatherphone.com/(voice).

Flying Through an Aurora

European Space Agency astronaut Alexander Gerst posted this photograph taken from the International Space Station to social media https://twitter.com/Astro_Alex/status/505282945272524800 on Aug. 29, 2014, writing, "words can't describe how it feels flying through an #aurora. I wouldn't even know where to begin…."
Crewmembers on the space station photograph the Earth http://www.nasa.gov/mission_pages/station/research/experiments/86.html from their unique point of view located 200 miles above the surface. Photographs record how the planet is changing over time, from human-caused changes like urban growth and reservoir construction, to natural dynamic events such as hurricanes, floods and volcanic eruptions. Crewmembers have been photographing Earth from space since the early Mercury missions beginning in 1961. The continuous images taken from the space station ensure this record remains unbroken.
On Tuesday, Sept. 9 aboard the space station http://www.nasa.gov/content/station-trio-prepares-for-departure-as-long-term-science-continues/, cosmonaut Max Suraev of Roscosmos takes the helm when Expedition 40 Commander Steve Swanson hands over control during a Change of Command Ceremony at 5:15 p.m. EDT. Suraev will lead Expedition 41 and stay in orbit until November with Gerst and NASA astronaut Reid Wiseman. Soyuz Commander Alexander Skvortsov, Swanson and Flight Engineer Oleg Artemyev will complete their mission Wednesday, Sept. 10 at 7:01 p.m. when they undock in their Soyuz TMA-12M spacecraft from the Poisk docking compartment for a parachute-assisted landing on the steppe of Kazakhstan a little less than 3.5 hours later.

Oh no! I will try it again. I'll be home shortly. In case you are wondering, this message sent via cell fone. I am hoping I do not need to send log on this fone. Doing 10 entries is tedious especially when the fone wants to correct the calls. I was sure I got his call correct. Let me see what happened when I get home. Ron

# 3077. TEN-TEC NET RESULTS WEEK ENDING 9-10-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-13 00:14:04 UTC
From: John Occhipinti
Topic: 3077  Message: 3077

17 checkins, 10 meter SSB net Sunday 1PM EDT on 28-440. Lloyd N2KPC, Net Control.

80 checkins, 40 meter SSB net Sunday 1:30PM EDT on 7.263. John K3UR, Net Control.

67 checkins, 20 meter SSB net Sunday 3PM EDT on 14.325. John K3UR, Net Control.

14 checkins, 40 meter CW net Monday 8PM EDT on 7.063. Ron WB1HGA, Net Control.

There was no 20 meter SSB net Wednesday, due to band conditions.

There was no report of checkins sent to Net Manager, for Wednesday 20 meter CW net.
---
Congratulations to the new 50 Checkin Certificate Winner:

K4RF Dan NC

Congratulations to the new 100 Checkin Certificate Winners:

KC4DYM Ray GA
KK4BE Ray TN

Note: W3TS Mike PA never received his 100 Checkin Certificate from several months ago.
---

We had 18 new people check into the nets this past week.
---

Congratulations and welcome to the new members of the tec_tec_radio_net Group. Thanks to all for your support of the TEN-TEC nets.

Note: I have not heard from Ian King for the past 3 weeks. He is the person that Jim Wharton told me that will be taken over the Certificate Program. I sent the net results and Certificate Winners to Ian King the past 3 weeks. Until we get any definite answers, please be patient for your Certificates.

John D. Occhipinti, K3UR
Net Manager, TEN-TEC nets

Broken Link ?

For the people it did not work for, check if the link is contained in a single line, or a line feed was forced in the middle of the link.
That is usually the cause of broken links on reflectors.

If it does have a line feed, then it will not work by clicking on it, but you can still copy the entire link and paste it into your browser’s address line.

Guys,
I do not understand how sum can open link and sum cannot
Check your browser settings, maybe?
For those that heard it, well, come to your own conclusion. I think it's both eerie and soothing.

Be kinda hard to get QSL reply though ...

# 3084. WEFAX FREQS, SKEDS with the TEN-TEC Model 712 USB

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-14 14:34:12 UTC
From: n2kpc@...
Topic: 3084 Message: 3084

Hi Everybody,
I do a lot of shortwave listening data decoding and if you like to see weather wefax satellites pictures, charts hurricane satellite pictures, forecasts, sea ice, etc, this is the place.

The TEN-TEC Model 712 USB soundcard digital mode adapter cable (6ft in length) is a soundcard USB device that allows direct connection of the AUX I/O, ACC 1, or AUX1 jacks on the Omni VII, Orion/Orion II, Argonaut V, Eagle, Argonaut VI, and some Jupiter HF transceivers to an open USB port for digital mode use.
For only $79.00 it is the best way to go.
Just plug in to your USB and plug the din and you sending and receiving.

If you have another Radio the Tigertronics SignaLink USB - Interface Cable Combo from Cheapham.com is the next cheapest way to go for about $99.00.
Cheapham.com is Frank, K2IYE who has done a lot for me to help New Hams, He can't be beat.

Also you can copy all the digi modes by using multipsk, then just turn on your microphone in your
computer to copy the wefax pictures sstv,cw,ritty, psk,etc.

Set the IOC to 576 and the LPM to 120 in the muliti-psk program for wefax.
You can go from USB to LSB by click normal or reverse.

The TEN-TEC Model 712 works great.

So now you will be able to keep a EYE out for the Hurricane Pictures when you don't have email, cable tv,
or cell phones, with your marine batteries with the solar charger that I know you have at the ready when the power goes out.

Notice I said BATTERIES, more than one, two are nice, one foe AM charging, one in use.

I teach the digital modes and demo them all the time so it might interest you too and you might start hunting wefax stations all over the world.

Here is the link,

NATIONAL WEATHER SERVICE MARINE PRODUCTS VIA RADIOFAX Marine Radiofax charts

http://weather.noaa.gov/fax/marine.shtml

Marine Radiofax charts http://weather.noaa.gov/fax/marine.shtml * Condensed versions show only the latest version of charts for easier access The mobile versions are yet further condensed pages

View on weather.noaa.gov http://weather.noaa.gov/fax/marine.shtml
Preview by Yahoo

Well it's time to drive up to the W2ZQ Shack in West Trenton, NJ to do the TEN-TEC Nets and some DX wefax.

Oh Yeah you can copy and send wefax to each other just like sstv.

73,
Lloyd N2KPC PR

Odile (Eastern Pacific)

September 15, 2014

http://www.nasa.gov/sites/default/files/odile_15_september_2014_0344_utc_trmm_pr_0.jpg

NASA's TRMM Satellite measured rainfall in Odile on Sept. 15. Odile contained intense thunderstorms around the eye above 12.5 km (about 7.8 miles) high dropping rain at a rate of over 188.4 mm (about 7.4 inches) per hour.

Image Credit:
NASA/SSAI, Hal Pierce

NASA's TRMM Satellite Sees Hurricane Odile Strike Baja California
NASA"s Tropical Rainfall Measuring Mission satellite known as TRMM captured data on powerful Hurricane Odile revealing heavy rainfall from powerful thunderstorms as it made landfall in Baja California. Odile tied a record for strongest hurricane to hit the Baja in over 40 years.
Odile made landfall near Cabo San Lucas at 0445 UTC (12:45 a.m. EDT) and was moving northwest along the length of the peninsula of Baja California, then northeast to the northern end of the Sea of Cortez.
TRMM passed directly above hurricane Odile on September 15, 2014 at 0344 UTC (Sept. 14 at 1:44 p.m. EDT). That was about an hour before the strong hurricane hit Baja California near Cabo San Lucas.

Youtube Override:

NASA's TRMM Satellite measured rainfall in Odile on Sept. 15. Odile contained intense thunderstorms around the eye above 12.5 km (about 7.8 miles) high dropping rain at a rate of over 188.4 mm (about 7.4 inches) per hour.

Image Credit:
NASA/SSAI, Hal Pierce

Youtube Override:

This animation of NOAA's GOES-West satellite imagery from September 13 through September 15 shows Hurricane Odile's movement and landfall near Cabo San Lucas on Mexico's Baja California. TRT 0:42

Image Credit:
NASA/NOAA GOES Project

The National Hurricane Center (NHC) hurricane discussion on September 15, 2014 said, "The estimated intensity of 110 knots at landfall ties Odile with Olivia (1967) as the strongest hurricane to make landfall in the satellite era in the state of Baja California Sur."
TRMM's Precipitation Radar (PR showed that Odile contained intense thunderstorms dropping rain at a rate of over 188.4 mm (about 7.4 inches) per hour in the hurricane's nearly

circular eye wall.
One of the TRMM satellites most useful features has been its ability to provide vertical profiles of the rain and snow from the surface up to a height of about 12 miles (20 kilometers). At NASA's Goddard Space Flight Center in Greenbelt, Maryland a simulated 3-D view of Hurricane Odile's rainfall structure was created using the satellite's radar reflectivity data. This view showed that the tops of many intense thunderstorms in Odile's eye wall were reaching heights above 12.5 km (about 7.8 miles).
By 2 p.m. EDT on September 15, Hurricane Odile's wind speeds decreased to about 90 mph (150 kph) after hitting land and winds are forecast by the NHC to slowly decrease to below hurricane force tomorrow. Odile is moving to the northwest at 13 mph (20 kph). It was centered near 25.1 north and 111.6 west, about 45 miles (70 km) east-northeast of Cabo San Lazaro, Mexico.
Torrential rainfall is predicted to continue near the weakening system. Flash floods and landslides with rainfall totals of over 152-305 mm (6-12 inches) are predicted by the NHC as Odile travels over the Baja California Peninsula. Western Mexico is expected to feel the effects of Hurricane Odile today and tomorrow as the hurricane continues to hug the coast.
A Hurricane Warning is in effect for Baja California Sur from Punta Abreojos to Santa Rosalia. A Hurricane Watch remains in effect for the west coast of Baja California Sur from north of Punta Abreojos to Punta Eugenia. A Tropical Storm Warning is in effect for the East Coast of the Baja Peninsula from north of Santa Rosalia to Bahia De Los Angeles, the west coast of the Baja Peninsula from north of Punta Eugenia to San Jose De Las Palomas and mainland Mexico from Altata to Bahia Kino.
A Tropical Storm Watch is in effect for the west coast of The Baja Peninsula North of San Jose De Las Palomas to Cabo San Quintin, the east coast of the Baja Peninsula From North of Bahia De Los Angeles to San Felipe and mainland Mexico from north of Bahia Kino to Puerto Libertad.
Although Odile continues to weaken heavy rainfall and flooding pose serious threats.

Sept. 12, 2014 - Tropical Storm Odile Taken on by Two NASA Satellites
As Tropical Storm Odile continues to affect Mexico's west coast and stir up dangerous surf, NASA's TRMM and Aqua satellites provided forecasters information on clouds and rainfall in the coast-hugging storm. On September 12, A Tropical Storm Watch remained in effect from Manzanillo to Cabo Corrientes, Mexico.
Tropical Storm Odile formed on September 10, 2014 in the same area where Norbert formed.

Gathering Rainfall and Thunderstorm Height Information
The Tropical Rainfall Measuring Mission or TRMM satellite flew over tropical storm Odile on September 11, 2014 at 0418 UTC (12:18 a.m. EDT) and collected rainfall data. A rainfall analysis made from TRMM's Microwave Imager (TMI) and Precipitation Radar (PR) data was overlaid on an enhanced infrared image of Odile's clouds from NOAA's GOES-West satellite to show where the rain was falling within that cloud shield (or the extent of the clouds). The coupled image showed that Odile was dropping rain at the extreme rate of over 196 mm (7.8 inches) per hour in powerful thunderstorms near Odile's center of circulation.
TRMM satellite radar reflectivity (which means the satellite reads signals bounced off the clouds and back to the satellite) data was used to create a simulated 3-D view (toward the east) of Odile's rainfall structure. The 3-D image showed the most intense thunderstorms were reaching altitudes of over 14.7 km (about 9.1 miles). The release of this much energy would normally lead to intensification but northeasterly vertical wind shear was dampening Odile. By September 12, that wind shear was relaxing, which will enable Odile to strengthen.
Taking the Cloud Top Temperatures
Later on September 11, NASA's Aqua satellite passed over Odile and the Atmospheric Infrared Sounder or AIRS instrument provided temperature data of Odile's cloud tops. The AIRS data confirmed the TRMM data, showing the coldest cloud tops in powerful thunderstorms circling the center of the storm. The AIRS data was false-colored to better show temperature differences at NASA's Jet Propulsion Laboratory in Pasadena, California. The coldest cloud tops were near -63F/-53C in storms circling Odile's center.
Odile's Location on September 12
At 8 a.m. EDT on September 12, Odile's maximum sustained winds were near 60 mph (95 kph) and some strengthening is forecast during the next 48 hours. The National Hurricane Center (NHC) advised that Odile could become a hurricane by tonight (Sept. 12). Odile's center was located near latitude 15.5 north and longitude 105.0 west. Odile is drifting toward the west near 2 mph (4 kph) and expected to move to the west-northwest and then northwest while picking up speed over the next day.
Dangerous Surf for Southwestern Mexico Over the Weekend
Odile's center is forecast will remain well offshore of the southwestern coast of Mexico through Sunday, September 14. Despite the center remaining off-shore, ocean swells are expected to affect the southwestern coast of Mexico over the next couple of days creating dangerous surf and riptides.
The NHC forecast calls for Odile to intensify into a hurricane and move in a northwesterly direction parallel to the west coast of Mexico. Odile is expected to follow close to the same track as hurricane Norbert and pass to the west of the southern tip of Baja California on Monday, September 15.

# 3099. Satellites Show Edouard's Transition into an Atlantic Hurricane

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-15 21:53:07 UTC
From: n2kpc@...
Topic: 3099 Message: 3099

Edouard (was TD6 - Atlantic Ocean)

September 15, 2014

Youtube Override:

This GOES-East satellite image animation of Edouard from Sept. 13 through 15 showed the storm consolidating. The eye of the hurricane became visible on and off during Sept. 14 in between being obscured by high clouds, and the eye opened again on Sept. 15. TRT: 0:35

Image Credit:
NASA/NOAA GOES Project

Satellites Show Edouard's Transition into an Atlantic Hurricane
NASA's Terra satellite passed over Tropical Storm Edouard each day from September 12 through 14 and captured imagery of the storm as it grew into a hurricane. NOAA's GOES-East satellite covers the Atlantic Ocean and takes visible images during the day and infrared images at night to show the movement of weather systems. Those images were compiled into a movie from Sept. 13 through 15 showing movement and intensification of Edouard into a hurricane. NASA's HS3 Mission also investigated the storm.
NASA's Terra satellite captured the three images of Edouard as it transitioned into a hurricane. When Terra flew over the storm, the Moderate Resolution Imaging Spectroradiometer (MODIS) instrument captured visible images on September 12 at 9:10 a.m. EDT, September 13 at 9:50 a.m. EDT, and September 14 at 10:35 a.m. EDT. The three images together show that Edouard consolidated as it strengthened - that is, bands of thunderstorms became more tightly wrapped around the storm. By September 14, the bands of thunderstorms were concentrated over the northern quadrant of the storm and wrapping into the cloud-filled eye.

http://www.nasa.gov/sites/default/files/hurricaneedouard-modis-sept12-14_0.jpg

NASA's Terra satellite captured these three images of Edouard as it transitioned into a hurricane, from Sept. 12 (left) to Sept. 13 (center) and finally as a hurricane on Sept. 14 (right) in the Atlantic Ocean.

Image Credit:
NASA Goddard MODIS Rapid Response Team

The NASA/NOAA GOES Project at NASA's Goddard Space Flight Center in Greenbelt, Maryland combined NOAA's GOES-East satellite imagery of Edouard taken over several days from September 13 through 15. The showed the storm consolidating. The eye of the hurricane became visible on and off during September 14 in between being obscured by high clouds, and the eye opened again on September 15.
On Sunday morning, September 14, 2014 at 1102 UTC (7:02 a.m. EDT) NASA's Global Hawk 872 took off from NASA's Wallops Flight Facility, Virginia on a flight toward Tropical Storm Edouard for a 24 hour mission. It was the sixth science flight for the Global Hawk during the Hurricane and Severe Storms Sentinel or HS3 mission. For more information about NASA's

HS3 mission, visit: www.nasa.gov/hs3 http://www.nasa.gov/hs3
On Sunday at 5 p.m. EDT Edouard's maximum sustained winds had increased to near 85 mph (140 mph) and additional strengthening is forecast. The National Hurricane Center (NHC) noted on Monday, September 15 at 11 a.m. EDT that Edouard's maximum sustained winds increased to 105 mph (165 kph) making it a Category 2 hurricane on the Saffir-Simpson Scale.
NHC forecaster Cangliaosi noted "Satellite images show that the eye of Edouard has become larger and more distinct during the past few hours, with a fairly symmetric inner-core convective pattern."
The center of Hurricane Edouard was near latitude 27.3 north and longitude 55.5 west. That's about 655 miles (1,055 km) east-southeast of Bermuda. Edouard was moving toward the northwest near 14 mph (22 kph) and a movement toward the north is expected on Tuesday, September 16. The estimated minimum central pressure is 966 millibars.
The NHC forecast calls for some strengthening through the end of the day on September 16 while the hurricane remains in favorable conditions. Beyond that time, cooler water, dry air, and a pronounced increase in wind shear is expected to cause Edouard to weaken steadily.

Well,  this goes into record books as braving one wicked QRM.
We had 13 ck ins. Absolutely not bad at all. I'm very happy we all rremain together.
Through that irratating noise that should be relegated to some frequency to disturb their own selves.
Another milestone for me was doing the entire net with hand key.
Man that was neat.
I also enjoyed working you guys on both cw nets.
Give yourselves few "attaboys"
Full check log will be listed tomorrow.
The last thing I need explain is abt my postings.
I been having unreliable service that mess up my email.
I been working with this issue.
I believe John N3UR has not yet received last weeks 20 cw log.
It is very tedious to enter that data on cell fone especially the fone is trying correct the calls.

>
>Yes, Ron disappeared for a little while, (causing chaos and confusion) for the net, maybe thats when he went to his computer and sent the email asking where everyone was. I know that he said he had something setup wrong but I didn't copy what he said.
>
>Last night was a good example in regards to Zero Beating NCS.
>
>The QRM that came on Freq was probably one of those un-maned digital Modes. Right now I'm at a lose as to what that Digital Mode is called.
>
>In fact the ARRL is Petitioning to allow for this kind of Digital operations to become the norm. Which would allow for Maritime and other non Amateur Stations, at (Random) Transmit at will for wx reports etc.. The Petition is RM-something.
>
>On another note, its obvious that not all Net participants use the Ten Tec Yahoo Groups Reflector. The end result is that there are some ops that do not know the CW Ten Tec Protocol.
>
>Here is my take on Net Protocol: ( I'm not speaking about what or how you send your Station Info)
>
>1.) Do not send your whole Callsign ! (this is a Ten Tec Net prerequisite)
>
>2.) Do not send your Suffix until you hear NCS calling QNI. When people just send out there suffix or complete Callsign especially when NCS is going thru his current list of Checkins, it only disrupts the Net and causes nothing but confusion and chaos.
>
>3.) There is a proper time as to when to send your suffix and when not to. Wait till NCS calls for QNI if you didn't make

the previous list . If you didn't get in on your first attempt. Be patient!
>
>4.) If you are sending your suffix to checkin after a few QNI requests and you are not acknowledged by NCS, when you think its the proper time, send your suffix followed by QNB. This also means that you need a Relay Station to get you Checked in.
>
>5.) Listen Listen and Listen.... just don't jump in at random, NCS or a Relay Station will get to you after he/NCS has run completely thru his previous list. So Please don't interrupt or intrude the net.
>
>Comments: There is no need for all of the confusion that takes place during the Net. Following the above Steps and Protocol will prevail. The CW Net is ran just like the SSB Nets, no difference, as to when you should Transmit your Callsign Suffix (ONE TIME).
>
>As for sending speed, Ron expects speeds up to only 13 wpm, No Speeders. I know there are some rusty CW Ops out there, or some not up to Par on there Receiving Speed skills, so again, Please NO Speeders.
>
>Just as I know that there are slow or some that don't run a lot of CW, I know that it may hard for them to copy even at 13 wpm and have difficulty. (On the other side of the coin, I ran all CW until the Ten Tec net was born, I then started using SSB). Just as it may be hard for the slow guys copying @ 13 WPM, in the same token, I have problems receiving and sending slow, then there are those darn Bugs. All in All though Ron has Posted many many times, NO Speeders and I respect his wishes.
>
>Of course, there will be New Stations wanting to Checkin that doesn't know any better. That is to be expected and it will happen from time to time. Other than that, the Net should run smoothly.
>
>In final: Listen Listen and be Patient!
>
>Ron / WB1HGA
>
>Wow, I would have never guessed and was surprised when you told us that you were running a straight Key. I did not detect it at all. Good Job!
>
>If you have any updates/corrections/comments/changes on the message above, let me know, or correct me if you disagree with any art of my Posting.
>
>PS... any other Comments are Welcome guys..
>
>Again, if you want to take a listen or Check into another Great CW Net, I recommend that you go to 7123 Khz @ 9 AM 7 days a week. The Protocol is a bit different and more Orthodox (in my opinion ). If you would like me to go into more depth on The Sunrise Net (SRN) procedures, let me know. This net has been in operations for Decades and runs like a car engine using synthetic oil.
>
>Everyone, please don't take this in the wrong way. I'm just trying to help streamline the Net.

The proposal to which Roger referred below is RM-11708. If you enjoy operating CW or one of the narrowband data modes (like JT65, JT9 and PSK31) then you will likely care about this proposal and it is definitely worth your time to review the material at this link:

http://savecw.com/ RM11708Default2.htm http://savecw.com/RM11708Default2.htm

There is a great deal of information about why this proposal for rulemaking could likely cause a great deal of interference to narrowband modes of transmission and links to papers which define the ARRL's position and reasoning are also provided at that link. Whether you end up supporting or being against this proposal for rulemaking, there is also a link which explains how you can file a short comment on it at the FCC.

I felt strongly enough about this proposal to take the time to file an official comment in June. Presuming that the comment period is still open, I invite anyone else who is interested in the issues over this proposal to do the same.

---In ten_tec_radio_net@yahoogroups.com, <ki8du1@...> wrote :

All;

Yes I Zero Beated Ron on 7.063.7 and he continued there for a while, and thats the way things should work ( you should always Zero Beat NCS). Anyway, later on he went to 7.063 kHz

Yes, Ron disappeared for a little while, (causing chaos and confusion) for the net, maybe thats when he went to his computer and sent the email asking where everyone was. I know that he said he had something setup wrong but I didn't copy what he said.

Last night was a good example in regards to Zero Beating NCS.

The QRM that came on Freq was probably one of those un-maned digital Modes. Right now I'm at a lose as to what that Digital Mode is called.

In fact the ARRL is Petitioning to allow for this kind of Digital operations to become the norm. Which would allow for Maritime and other non Amateur Stations, at (Random) Transmit at will for wx reports etc.. The Petition is RM-something.

On another note, its obvious that not all Net participants use the Ten Tec Yahoo Groups Reflector. The end result is that there are some ops that do not know the CW Ten Tec Protocol.

Here is my take on Net Protocol: ( I'm not speaking about what or how you send your Station Info)

1.) Do not send your whole Callsign ! (this is a Ten Tec Net prerequisite)

2.) Do not send your Suffix until you hear NCS calling QNI. When people just send out there suffix or complete Callsign especially when NCS is going thru his current list of Checkins, it only disrupts the Net and causes nothing but confusion and chaos.

3.) There is a proper time as to when to send your suffix and when not to. Wait till NCS calls for QNI if you didn't make the previous list . If you didn't get in on your first attempt. Be patient!

4.) If you are sending your suffix to checkin after a few QNI requests and you are not acknowledged by NCS, when you think its the proper time, send your suffix followed by QNB. This also means that you need a Relay Station to get you Checked in.

5.) Listen Listen and Listen.... just don't jump in at random, NCS or a Relay Station will get to you after he/NCS has run completely thru his previous list. So Please don't interrupt or intrude the net.

Comments: There is no need for all of the confusion that takes place during the Net. Following the above Steps and Protocol will prevail. The CW Net is ran just like the SSB Nets, no difference, as to when you should Transmit your Callsign Suffix (ONE TIME).

As for sending speed, Ron expects speeds up to only 13 wpm, No Speeders. I know there are some rusty CW Ops out there, or some not up to Par on there Receiving Speed skills, so again, Please NO Speeders.

Just as I know that there are slow or some that don't run a lot of CW, I know that it may hard for them to copy even at 13 wpm and have difficulty. (On the other side of the coin, I ran all CW until the Ten Tec net was born, I then started using SSB). Just as it may be hard for the slow guys copying @ 13 WPM, in the same token, I have problems receiving and sending slow, then there are those darn Bugs. All in All though Ron has Posted many many times, NO Speeders and I respect his wishes.

Of course, there will be New Stations wanting to Checkin that doesn't know any better. That is to be expected and it will happen from time to time. Other than that, the Net should run smoothly.

In final: Listen Listen and be Patient!

Ron / WB1HGA

Wow, I would have never guessed and was surprised when you told us that you were running a straight Key. I did not detect it at all. Good Job!

If you have any updates/corrections/comments/changes on the message above, let me know, or correct me if you disagree with any art of my Posting.

PS... any other Comments are Welcome guys..

Again, if you want to take a listen or Check into another Great CW Net, I recommend that you go to 7123 Khz @ 9 AM 7 days a week. The Protocol is a bit different and more Orthodox (in my opinion ). If you would like me to go into more depth on The Sunrise Net (SRN) procedures, let me know. This net has been in operations for Decades and runs like a car engine using synthetic oil.

Everyone, please don't take this in the wrong way. I'm just trying to help streamline the Net.

72+1

I have Birdies everywhere. Its being generated from my DSL Eithernet Cable. I have everything grounded, I have Ferrite Beads on my Eithernet Cable.

The only way to get rid of those goblins is to unplug the eithernet cable from the rear of my computer. And Lord knows, My Shack is virtually down without Internet Access.

Anyone?

Yeah, I have Wifi. The problem with that is my house is Rancher Style, I think it was built in 1961. The foundation is a concrete slab that the house sits on. Also all of the interior walls are Cinder Block cover with Stucco.

The Router is in the house so unfortunately WiFI sigs won't reach my Computer in my Shack, which is located in the Garage. I can't move the Router from where its resting due to the YL would lose her I-Phone connection.

As a last resort, I have another Router on hand and I'm going to add it to my network and place it out here in the Garage.

Fingers Crossed.....

Tks

My suggestion also, go wireless. My combo modem/router are at least 40' from my shack and on the second floor. No problems at all. Maybe a new router would be the answer also.

Hi Folks
Just to interject,has nothing to do with your
Gremlins but I found out the cause of my RFI last Wed before the net
my wife was sitting outside and noticed a wire on the ground,yes it was
one half of my G5RV that broke loose from a tree where it was tied.
All is well now and the net this coming Wed will go as scheduled.

# 3146. LUNAR ECLIPSE TONIGHT 9-18-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-18 23:12:54 UTC
From: n2kpc@...
Topic: 3146  Message: 3146

Sept. 18, 2014: On Wednesday morning, Oct. 8th, not long before sunrise, the bright full Moon over North America will turn a lovely shade of celestial red. It's a lunar eclipse—visible from all parts of the USA.

"It promises to be a stunning sight, even from the most light polluted cities," says NASA's longtime eclipse expert Fred Espenak. "I encourage everyone, especially families with curious children, to go out and enjoy the event."

http://www.youtube.com/watch?v=wmCK2Pfsh0Y&feature=youtu.be A new ScienceCast video examines the red and turquoise colors sky watchers can expect to see during the Oct. 8, 2014, total lunar eclipse. Play it

From the east coast of North America, totality begins at 6:25 am EDT. The Moon will be hanging low over the western horizon, probably swollen by the famous Moon illusion into a seemingly-giant red orb, briefly visible before daybreak. West-coast observers are even better positioned. The Moon will be high in the sky as totality slowly plays out between 3:25 am and 4:24 am PDT.

During a lunar eclipse, the Moon passes deep inside the shadow of our planet, a location that bathes the the face of the Moon in a coppery light.

http://science.nasa.gov/mailing-lists/subscribe/

A quick trip to the Moon explains the color: Imagine yourself standing on a dusty lunar plain looking up at the sky. Overhead hangs Earth, nightside down, completely hiding the sun behind it. The eclipse is underway.

You might expect Earth seen in this way to be utterly dark, but it's not. The rim of the planet is on fire! As you scan your eye around Earth's circumference, you're seeing every sunrise and every sunset in the world, all of them, all at once. This incredible light beams into the heart of Earth's shadow, filling it with a coppery glow and transforming the Moon into a great red orb.

However, red is not the only color. Many observers of lunar eclipses also report seeing a band of turquoise.

http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig03.pdf Click to see a worldwide eclipse visibility map

The source of the turquoise is ozone. Atmospheric scientist Richard Keen of the University of Colorado explains: "During a lunar eclipse, most of the light illuminating the moon passes through the stratosphere where it is reddened by scattering. However, light passing through the upper stratosphere penetrates the ozone layer, which absorbs red light and actually makes the passing light ray bluer." This can be seen, he says, as a soft blue fringe around the red core of Earth's shadow.

To catch the turquoise on Oct. 8th, he advises, "look during the first and last minutes of totality. The turquoise rim is best seen in binoculars or a small telescope."

The depth and hue of lunar eclipse colors depends a lot on the dustiness of the stratosphere. When volcanoes erupt and chock the stratosphere with aerosols, lunar eclipses can turn such a deep red that the Moon looks almost black. That's not the case this time, however:

"Despite some recent eruptions that look spectacular from the ground, there have been no large injections of volcanic gases into the stratosphere," says Keen. "In the absence of volcanic effects, I expect a rather normal reddish-orange lunar eclipse similar in appearance to last April's eclipse."

In other words, this is going to be good.

Espenak notes that "the total lunar eclipse of Oct. 8 is the second of four consecutive total lunar eclipses. Such a set of total eclipses is known as a tetrad." The next eclipse in the tetrad is six months from now, in April 2015.

"Don't wait," he urges. Mark your calendar for October 8th, wake up early, and enjoy the show.

Florida to Louisiana Viewed From the International Space Station

NASA astronaut Reid Wiseman captured this image of Florida to Louisiana just before dawn, taken from the International Space Station, and posted it to social media on Friday, Sept. 12. Wiseman, Commander Max Suraev and Flight Engineer Alexander Gerst Three-Person Station Crew Preps for Spacecraft Traffic http://www.nasa.gov/content/three-person-station-crew-preps-for-spacecraft-traffic/ as a three-person crew aboard the space station, while the three additional flight engineers who will round out the Expedition 41 crew spent the day training for next week’s launch to the orbiting complex.

http://www.nasa.gov/content/three-person-station-crew-preps-for-spacecraft-traffic/

Three-Person Station Crew Preps for Spacecraft Traffic http://www.nasa.gov/content/three-person-station-crew-preps-for-spacecraft-traffic/ While Expedition 41 began its first full workweek as a three-person crew aboard the station, three additional crewmates prepped for Sept. 25 launch.

Several members of the TEN-TEC Family came to the Delaware Valley Radio Association, W2ZQ Hamfest
and gather around my TEN-TEC Demo and had a nice time today.
K2BLC Lee honored us from North New Jersey and it was a perfect weather day.
We also had K2XU, John, WA3DX, Earl, KC3BHD, Fatu, KC2TKD, Frank, KC2TGM, Mark, K2DRN, David,
KD2EIM, Bob, KD2EOZ, Chris, KA2IFY, Allan, KC2PQC, Ron, AC2MW, Mike, K2IYE, Frank, KC2VDL, Steve, KC2VDM, Alex, AB2VG, Hy Gold who have all checked into the TEN-TEC Nets.
All gathered around the TEN-TEC demo table and it attracted new and old Hams and Shortwave Listeners to stick around and hear nice things all the way around about TEN-TEC and Amatuer Radio.
K2XU, John, KC2TGM, Mark, and AC2MW, Mike where chomping at the bit waiting for their New Ten-TEC Radio to arrive from TN, They looked to me to be standing a little closer to my TEN-TEC display table which had Eagle, Omni 7, Rebel with a Regal 707 Desk Mike on it, HiHi.
So we all had a nice time and we will gain some new members from this get together because several members of the TEN-TEC Family took the time to share with the strangers who just stopped by my TEN-TEC demo to see what was happing today in New Jersey in the good old USA.

# 3161. A Laser Message from Space ISS

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-09-23 01:00:14 UTC
From: n2kpc@...
Topic: 3161  Message: 3161

June 18, 2014: Anyone who remembers dialup internet can sympathize with the plight of NASA mission controllers. Waiting for images to arrive from deep space, slowly downloading line by line, can be a little like the World Wide Web of the 1990s. Patience is required.
A laser on the International Space Station (ISS) could change all that. On June 5th, 2014, the ISS passed over the Table Mountain Observatory in Wrightwood, California, and beamed an HD video to researchers waiting below. Unlike normal data transmissions, which are encoded in radio waves, this one came to Earth on a beam of light.

"It was incredible to see this magnificent beam of light arriving from our tiny payload on the space station," says Matt Abrahamson, who manages the Optical Payload for Lasercomm Science at NASA's Jet Propulsion Laboratory.

https://www.youtube.com/watch?v=S8uL8ox-SlQ&feature=youtu.be The bright spot in this telescopic image of the ISS is the OPALS laser beam transmitting HD video to Earth. A new ScienceCast video explains how it works. Play it

Better known as "OPALS," the experimental laser device was launched to the space station onboard a Space-X Dragon spacecraft in the spring of 2014. Its goal is to explore the possibility of high-bandwidth space communications using light instead of radio waves. If successful, researchers say OPALS would be like an upgrade from dial-up to DSL, achieving data rates 10 to 1,000 times higher than current space communications.

http://science.nasa.gov/mailing-lists/subscribe/

So far so good.

The entire transmission on June 5th lasted 148 seconds and achieved a maximum data rate of 50 megabits per second. It took OPALS 3.5 seconds to transmit a single copy of the video message, which would have taken more than 10 minutes using traditional downlink methods. The message was sent multiple times during the transmission.

Abrahamson says "the video is an homage to the first output of any standard computer program: 'Hello, World.'"

https://www.youtube.com/watch?v=hPOstCZKycI Click on the image to play the complete "Hello World" video.

Because the space station whips around Earth at 17,500 mph, "laser-tagging" a telescope on the fast-moving ground below can be tricky. To accomplish the precision tag-up, a laser at the ground station illuminated the station. OPALS responded by sending its own 2.5 watt encoded laser signal right back in the same direction, carrying the HD video. During the 148-second transmission, OPALS maintained pointing to the ground station within 0.01 degrees while tracking at speeds up to 1 degree per second.

"NASA missions collect an enormous amount of data out in space," says Abrahamson. "Laser communications is a faster alternative for getting those data to the ground."

"With this demonstration, we're paving the way for the future of communications to and from space."

>
>Better known as "OPALS," the experimental laser device was launched to the space station onboard a Space-X Dragon spacecraft in the spring of 2014.  Its goal is to explore the possibility of high-bandwidth space communications using light instead of radio waves.  If successful, researchers say OPALS would be like an upgrade from dial-up to DSL, achieving data rates 10 to 1,000 times higher than current space communications.

Ted, was there a CW net last night?

Just in case anyone has some free time, I have uploaded 5 songs with me playing some pretty fancy accordion solos. When I was a teenager, I was known as an "accordion virtuoso" and many professional people in the music field use to refer to me as, "the boy who can make an accordion talk"'.

After listening to these songs, let me know if you agree with them. Just click on my soundcloud link below and enjoy the music. Thank you.

Yes, there was a net and I logged 2 stations.
It was the only 2 I heard.
Slammed with QRM by those darn digital rtty-like signals.
I hope ARRL has petition to place them in one part of the spectrum where they can interfere with each other. SSTV has spectrum by themselves as have PSK.
RX anyone was almost impossible last nite.
My apology to the group.
The 2 lucky stations in the log are:

W3TS. Mike PA. Orion

K9QED. Phil IL. Omni 7

Next time, please stay with us because I notice the QRN is present for perhaps 5 to 10 minutes. Then we have the frequency open.

A relay station in times like this would have. Been helpful.
Anyone could jump into the QRM. Hole and become a hero. (Smile)
When the noise subsided. I still had not heard anything.

And here I thought there was no net! We are visiting friends in Illinois and I totally forgot about the 1 hour time difference. Oh well I'll try again on Wednesday eve.
Tony VE3DWI.

Sent from my BlackBerry 10 smartphone on the Bell network.

?

Yes, there was a net and I logged 2 stations.
It was the only 2 I heard.
Slammed with QRM by those darn digital rtty-like signals.
I hope ARRL has petition to place them in one part of the spectrum where they can interfere with each other. SSTV has spectrum by themselves as have PSK.
RX anyone was almost impossible last nite.
My apology to the group.
The 2 lucky stations in the log are:

W3TS. Mike PA. Orion

K9QED. Phil IL. Omni 7

Next?time, please stay with us because I notice the QRN is present for perhaps 5 to 10 minutes. Then we have the frequency open.

Roger, you have filled in for Ron before, so allow me to appoint you as the Official Backup Net Control for the TEN-TEC CW nets.

As a good will gesture, I want to hear from all those who tried to check into the net last night and I will give you a checkin credit. Now, please let me know if my accordion can really talk!

John,

I checked into the cw net. Heard and zero beat Ron on 7.0637. Several “QNI’s later, all unheard, Ron went QRT.

By the way, were you the kid that played “Lady of Spain” on the Ed Sullivan show?

Yep.
The Ten Tec
CW net begins at 8pm Eastern time.
It's on 14063.
This time, if that annoying QRM returns, we stick together.
Also, we could use a relay if Roger not present.
Band rated fair tonight

# 3201. Five spacecraft are parked at the International Space Station

Yahoo group: ten_tec_radio_net (2007 — 2014)

Expanded Crew Relaxes After Busy Week of Docking Activities

September 26, 2014

http://www.nasa.gov/sites/default/files/iss_09-25-14_0.jpg

Five spacecraft are parked at the International Space Station including the Soyuz TMA-14M and Dragon which docked this week.

Image Credit:
NASA

The Expedition 41 crew doubled in size over night and the International Space Station is now packed with five vehicles docked to various ports.
NASA astronaut Barry Wilmore and cosmonauts Alexander Samokutyaev and Elena Serova completed a near six-hour ride to their new home in space after launching Thursday afternoon from the Baikonur Cosmodrome in Kazakhstan. The Soyuz TMA-14M safely ferried the trio to the Poisk docking compartment despite a port solar array that wouldn't deploy until after its docking.
› Read about the arrival of the Expedition 41/42 trio
They join Commander Max Suraev, NASA astronaut Reid Wiseman and European Space Agency astronaut Alexander Gerst who have been orbiting the Earth since May 28. The six-member crew had an off-duty Friday to relax and will resume unloading cargo Saturday from the SpaceX Dragon which arrived Tuesday morning.
› Read about the arrival of SpaceX CRS-4 http://www.nasa.gov/content/fourth-dragon-for-commercial-resupply-services-arrives-at-station
The new trio will spend the next several days adjusting to life on the space station. They will have time set aside to familiarize themselves with procedures and the numerous systems onboard the orbital laboratory.
The brand new Soyuz delivered new science that will keep the station crew and scientists on Earth busy for months to come. Dragon also delivered new research to complement the ongoing experiments that can only be conducted in the unique environment of space. This microgravity research encompasses numerous disciplines to improve life on Earth and enable longer duration human exploration missions beyond low-Earth orbit.
Among the more interesting cargo packed inside the Soyuz spacecraft were Zebrafish that will live in the Japanese Kibo laboratory's Aquatic Habitat. Investigators will observe the fish to study the chemical signals, proteins and cellular activity that lead to muscular atrophy caused by long-term exposure to microgravity.
› Read about the Zebrafish Muscle experiment
http://www.nasa.gov/mission_pages/station/research/experiments/65.html
Serova, who is on her first mission to space, is Russia's first female cosmonaut to visit the space station. Samokutyaev is on his second long-term mission to the station, his first being Expedition 27/28 in 2011. Wilmore piloted space shuttle Atlantis in November 2009 to the station for an 11 day visit.
There are two more cargo missions targeted to launch to the space station before the end of the year. Orbital Sciences just announced October 20 as the next launch date for their

Cygnus commercial space freighter. It will occupy the same Harmony node port as Dragon when it leaves in a few weeks. When Cygnus vacates the Harmony node port, SpaceX CRS-5 will replace it in December.
73,
Lloyd N2KPC PR

# 3202. TEN-TEC NETS TOMORROW SUNDAY 9-28-2014

It's actually EG1DEP which is a special event station and I worked him just before I checked in with Lloyd. Sadly he was splattering all over the band and was even causing me some problems to hear Lloyd. He is still on now and seems to have cleaned up his signal.

Just a hint of change here in New Jersey.
73,
Lloyd N2KPC

Fall Colors Arriving

A few days after autumn showed up on the calendar in the Northern Hemisphere, it showed up on the landscape of North America. The Moderate Resolution Imaging Spectroradiometer (MODIS) on NASA’s Terra satellite captured this view of fall colors around the Great Lakes on Sept. 26, 2014.
The changing of leaf color in temperate forests involves several causes and reactions, but the dominant factors are sunlight and heat. Since temperatures tend to drop sooner and sunlight fades faster at higher latitudes, the progression of fall color changes tends to move from north to south across North America from mid-September through mid-November.
In late summer and autumn, tree and plant leaves produce less chlorophyll, the green pigment that harvests sunlight for plants to convert water and carbon dioxide into sugars. The subsidence of chlorophyll allows other chemical compounds in the leaves—particularly carotenoids and flavonoids—to emerge from the green shadow of summer. These compounds do not decay as fast as chlorophyll, so they shine through in yellows, oranges, and reds as the green fades. Another set of chemicals, anthocyanins, are associated with the storage of sugars and give the leaves of some species deep purple and red hues.

Hello Ray, Yes that mic will work fine. Generally any dynamic mic made for vocals will work as long as the impedance is about 150 to 600 ohms.

You will need a mic cable that is wired correctly, you can make one yourself or you can buy one from heil sound like the ones here
(http://www.heilsound.com/amateur/products/accessories/microphone-connecting-cables
http://www.heilsound.com/amateur/products/accessories/microphone-connecting-cables )
Just select the right cable for your rig then adjust the mic gain for proper ALC and then adjust the EQ to suit the mic and you voice and you should be all set.
Good luck
John

Milky Way Viewed From the International Space Station

NASA astronaut Reid Wiseman captured this image from the International Space Station and posted it to social media https://twitter.com/astro_reid/status/516262431056990208 on Sept. 28, 2014, writing, "The Milky Way steals the show from Sahara sands that make the Earth glow orange."
Aboard the space station, the six-person Expedition 41 crew is currently http://www.nasa.gov/content/station-crew-gears-up-for-next-week-s-spacewalk/index.html http://www.nasa.gov/content/station-crew-gears-up-for-next-week-s-spacewalk/index.html set for Oct. 7 and 15. During the first six-and-a-half-hour spacewalk, slated to begin on Oct. 7 around 8:10 a.m. EDT, Wiseman and European Space Agency astronaut Alexander Gerst will transfer a previously uninstalled pump module from its temporary stowage location to the External Stowage Platform-2. The two spacewalkers also will install the Mobile Transporter Relay Assembly that adds the capability to provide “keep-alive” power to the system that moves the station’s robotic arm between worksites. NASA astronaut Barry Wilmore will join Wiseman for the second Expedition 41 spacewalk on Oct 15.

73,
Lloyd N2KPC PR

Ron was sounding very good here in Middle Georgia this past Wednesday night.

Historically when glowing reports are given on Ron's signal I've had a very difficult time copying him. When I hear Ron very good people report how bad conditions were.

It seems the propagation gods do not smile equally on everyone out there in Amateur Radio Land all at the same time together.

W3LI, Andy,

I have a Funeral Service for one of my Firefighters Sunday which will run into Net time.
Can you do the TEN-TEC SSB Nets starting with the 10 Meter SSB Net at 1:00 PM?
When the Funeral Service is done I will drive to the W2QZ Shack to join you if nothing comes up.
I am President of the Fire Company and need to be there for this one.
Let me know so I can let John, K3UR know.

Lloyd, Will try to run the 10 meter net until 1430 lcl. I also have a function at our fire house Sunday afternoon.

No point in me going to 40 as I do not do well there. As U R aware I always ck in with U as my path to John is poor at best. I would suggest getting in touch with Ted, N8TJE. Ted seems to have a good path on 40.

If home in time I will jump in on 20. Maybe CU there.

Please advise brother John, K3UR of the siuation.

Sorry to here about another Fire Fighter passing.

Andy, W3LI

Got the Eagle on Wednesday, installed in the work truck, catch you all on the nets.

I posted a few pics of the mobile install with the new Eagle, didn't have a real good background for the outside photos, I'll update when I get better ones.

Some details: Eagle mounted using mobile bracket and RAM laptop mount to place rig within easy view and reach. Tarheel 100 screwdriver antenna with homebrew 2 ft cap hat made from 14 ga antenna wire on 30" whip. 4ga power cable from battery to under right seat, 10ga to radio. 1/2" braid from battery to cab to antenna. Braid to major panels of truck cap & bed, still have more braid to run.

2nd day with the Eagle, worked a few midwest stations on 40 mtrs, DX on 17 & 15 - Finland, Estonia, Germany, bands died out in the afternoon, including 40. AGC action is superb, backing off the RF gain quiets the receiver, seems somewhat similar to the Corsair II I used to have. I like the medium AGC setting best for SSB, bandwidth at 2500, PBT about 2 o'clock to balance the audio response. Played with the filtering on CW down to 100 hz, just amazing. Still learning and playing.....

I believe the knobs may have taken some pressure during shipping, I loosened and readjusted, nothing broken.

Andy K9ARM

Well, you've had me at 20 over 9 a few times, 2 watts shouldn't be a problem. The mount is a RAM no drill laptop mount, tried to buy individual components to make it work. It bolts under the shotgun side seat bolts. Ends up with a vertical pipe, about 1 1/2", very substantial. The top is a "tilt & turn piece they just came out with. If you want part numbers, I can look them up, found a good source on ebay. It's pricey, but I wanted to get it right. Truck #5 since 2002.

Catch you on the nets....

Andy K9ARM

Rosetta Comet Fires Its Jets

The four images that make up this montage of comet 67P/Churyumov–Gerasimenko were taken on Sept. 26, 2014 by the European Space Agency’s Rosetta spacecraft. At the time, Rosetta was about 16 miles (26 kilometers), from the center of the comet.
In the montage, a region of jet activity can be seen at the neck of the comet. These jets, originating from several discrete locations, are a product of ices sublimating and gases escaping from inside the nucleus.
The overlapping and slightly dissimilar angles of the four images that compose the montage are a result of the combined effect of the comet rotating between the first and last images taken in the sequence (about 10 degrees over 20 minutes), and the spacecraft movement during that same time.
Launched in March 2004, Rosetta was reactivated in January 2014 after a record 957 days in hibernation. Composed of an orbiter and lander, Rosetta's objectives since arriving at comet 67P/Churyumov-Gerasimenko earlier this month are to study the celestial object up close in unprecedented detail, prepare for landing a probe on the comet's nucleus in November, and after the landing track the comet's changes through 2015, as it sweeps past the sun.
Comets are time capsules containing primitive material left over from the epoch when the sun and its planets formed. Rosetta's lander will obtain the first images taken from a comet's surface and will provide comprehensive analysis of the comet's possible primordial composition by drilling into the surface. Rosetta also will be the first spacecraft to witness at close proximity how a comet changes as it is subjected to the increasing intensity of the sun's radiation. Observations will help scientists learn more about the origin and evolution of our solar system and the role comets may have played in seeding Earth with water, and perhaps even life.
Rosetta is an ESA mission with contributions from its member states and NASA. Rosetta's Philae lander is provided by a consortium led by the German Aerospace Center, Cologne; Max Planck Institute for Solar System Research, Gottingen; National Center of Space Studies of France (CNES), Paris; and the Italian Space Agency, Rome. NASA's Jet Propulsion Laboratory in Pasadena, California, a division of the California Institute of Technology, manages the U.S. participation in the Rosetta mission for NASA's Science Mission Directorate in Washington.
For more information on the U.S. instruments aboard Rosetta, visit:
http://rosetta.jpl.nasa.gov http://rosetta.jpl.nasa.gov/
More information about Rosetta is available at:

With your HF antenna you too can hear the OLD Time Radio Shows on 900 AM.
They come in great on your AM-FM car radio too.
Just tune in with your HF Dipole, Vertical, Yagi, Beam, Slinky with a wire hooked to it with a Alligator Clip and "away we go", The Great One Said That" J.G.
AM 900 and AM 740 Broadcasting to all of the USA before and after midnight from Canada.
Also live streamed on your computer, but its more fun on your HF Radio.

AM 900 Radio Station HCML in Hamilton, Ontario Canada schedule for OLD Time Radio Shows in online.

Hope you enjoy them as much as I do.
73,
Lloyd N2KPC PR

# 3262. OLD TIME RADIO SHOW PART 2

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-03 16:21:19 UTC
From: n2kpc@...
Topic: 3262  Message: 3262

We are Blessed with two OLD Time Radio Stations from Canada beaming the entire USA
Here is the second one.
I use my Spi-ro D-56 80 thru 10 meter Trap dipole the most or a Tennadyne HF Log Periodic at home.
Both AM 900 and AM 740 come in great on your car radio, but I use my Scorpion 160-6 meter or 80-6 meter Scorpion screwdriver mobile antenna on the road, Surf fishing or just hanging out with some train spotters taking pictures late at night.
Even a coat hanger bent into a loop or diamond will do fine to null out other stations depending on where you live.

So bring out that old unused AM tube radio, S-38-C, Pocket AM-FM, NC-183-d, HQ-150 or your TEN-TEC HF Radio and TUNE IN THE TEN-TEC HF FOR THAT NON-HAM IN YOUR FAMILY AND MAYBE THRU the OLD TIME RADIO SHOWS they might let you get that TEN-TEC for Christmas after all so They can hear the Old Time Radio Shows BETTER, HiHi.

Schedule for the week of September 29th – October 3rd This week we're presenting mystery with THE ADVENTURES OF PHILIP MARLOWE followed by comedy with ABBOTT AND COSTELLO

Mon, Sep 29, 2014 – 10P
MEXICAN BOAT RIDE – THE ADVENTURES OF PHILIP MARLOWE, 1949
DRIVING LESSONS – ABBOTT & COSTELLO, 1947
Tue, Sep 30, 2014 – 10P
WHERE THERE'S A WILL – THE ADVENTURES OF PHILIP MARLOWE, 1948
KNIGHTS IN SHINY ARMOR – ABBOTT & COSTELLO, 1942
Wed, Oct 01, 2014 – 10P
THE STRANGLE HOLD – THE ADVENTURES OF PHILIP MARLOWE, 1949
COSTELLO GETS A TATTOO – ABBOTT & COSTELLO, 1945
Thu, Oct 02, 2014 – 10P
THE GOOD NEIGHBOR POLICY – THE ADVENTURES OF PHILIP MARLOWE, 1951
COSTELLO INVESTS IN THE STOCK MARKET – ABBOTT & COSTELLO, 1947
Fri, Oct 03, 2014 – 10P
THE IRON COFFIN – THE ADVENTURES OF PHILIP MARLOWE, 1950
LOU SUBSTITUTES FOR JOE DI MAGGIO – ABBOTT & COSTELLO, 1949
Tune in to Theatre of The Mind with Brian Peroff weekdays from 10pm-11pm only on The New AM 740.

# 3263. TEN-TEC SSB Nets Tomorrow Sunday 10-05-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-04 17:21:38 UTC
From: n2kpc@...
Topic: 3263  Message: 3263

W3LI Andy will fill in for me on 10 meters from 1:00PM to 1:30PM.
I have a FireFighter Funeral Sunday and may miss the nets depending on how it goes.

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 20 meter CW net starts each Wednesday at 8:00PM Eastern Time on 14.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change
frequencies, as not to interfere with other Amateur Radio activity

A brief reminder the Ten Tec CW net is on 7063 tonight at 8 PM Eastern time.
When you hear QNI please listen before sending last two letters of your call. This helps keep doubling down.
I will repeat your last two letters. If you hear your call, please stop sending your call when I QNI for more check ins.
I will call QNB? You can relay any stations I cannot hear.
Also,  please maintain speeds up to 13 wpm even during relay.
The purpose of this net is to promote cw activity and having fun doing so.
There are new comers and oldcomers cleaning the dust off the paddles, enter the net.

See you tonight!

Ron wb1hga

# 3290. New NASA Technology Brings Critical Data to Pilots

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-07 15:20:36 UTC
From: n2kpc@...
Topic: 3290  Message: 3290

New NASA Technology Brings Critical Data to Pilots Over Remote Alaskan Territories

http://www.nasa.gov/sites/default/files/14-274_0.png

NASA's Traffic and Atmospheric Information for General Aviation (TAIGA) technology system is capable of showing pilots the altitude of nearby terrain via color. Yellow identifies terrain that is near the aircraft's altitude and red shows the terrain that is higher than the plane's altitude.

Image Credit:
ARC/Joseph Rios

NASA has formally delivered to Alaskan officials a new technology that could help pilots flying over the vast wilderness expanses of the northern-most state. The technology is designed to help pilots make better flight decisions, especially when disconnected from the Internet, telephone, flight services and other data sources normally used by pilots.
S. Peter Worden, director of NASA's Ames Research Center in Moffett Field, California, and Thomas Edwards, Director of Aeronautics at Ames, met with Alaskan officials Monday to deliver the software innovation known as the Traffic and Atmospheric Information for General Aviation (TAIGA). This aviation technology, a collection of algorithms, concepts and data, is the result of a joint effort between Ames and the State of Alaska.
Over the vast expanses of Alaska, with its mountainous terrain and extreme weather events, pilots often are disconnected from vital navigation aids and communication. Taking on these factors, NASA developed a satellite-based communication method through which regional data is sent only to that specific region. The customized data sets can be downloaded quickly and plugged into a mobile application.
NASA has developed only a conceptual version of the mobile software application, which includes full 3-D terrain visualization. The algorithms, concepts and data are available as an open-source project for further development by industry and the aviation community into an end-user system. The 3-D terrain visualization software will be made available separately.
"We are excited to lend a helping hand to general aviation pilots in Alaska," said Worden. "With the TAIGA app, Alaska pilots will be able to remain independent, but with a dose of safety when needed."
In a recent test at Ames, data from a satellite-based messaging system was successfully received on the satellite receiver and viewed on the concept version of the mobile app while in flight. Since sending data via satellite can be expensive, NASA also developed a method for tightly bundling the data to be transmitted, thereby decreasing the cost of satellite data transmission using this technology.
"Each data broadcast will go only to the areas that are appropriate for those data," said Joseph Rios, TAIGA engineer at Ames. "Once a pilot receives a data broadcast, it will be available for viewing on their iPad."
The next step in development of the TAIGA concept will be for engineers with the State of Alaska to take the NASA concept and develop it to an app that meets the specific needs of Alaskan pilots. Ames will continue to investigate new functionalities, and Alaskan officials hope to distribute a production prototype app to general aviation pilots for

testing early next year.
Ames is a leader is developing decision support tools that help air traffic managers maintain and enhance the safety and efficiency of the National Airspace System (NAS).
NASA’s Next Generation Air Transportation System (NextGen) is a comprehensive transformation of the NAS, which includes all components, such as airspace, facilities, equipment, services, workforce and procedures that enable the nation’s air transportation system.
Part of the NextGen effort, TAIGA specifically focuses on increasing safety for pilots in Alaska. The technology is the product of a Space Act Agreement between Ames and the State of Alaska to collaborate on space exploration, advanced aviation, scientific research, and science, technology, engineering and mathematics education initiatives.

Andy,
I'm curious what your filter etc. setting are. The digital stations are S9+20 at my location but I can diminish their impact sufficiently so it does not bother me too much. Sometimes I think that the station just sits there beaconing and not much else. Last night there were signals going back and forth as I could see different signal strengths. If it becomes a real problem, Ron could consider a frequency below 7.025 MHz as digital signals are not allowed there (tongue in cheek comment hi.. hi).
73, Tony VE3DWI.

Yes, this was only a suggestion for consideration ?on my part. ☐ Anything below 7025 is supposed to be CW only.? Operators with older and/or less sophisticated radios☐ may have difficulty filtering out the data signals. ?And of course we would not want to change anything without the consent of John K3UR.?

Tony, first of all I have my RF Gain as low as possible to here Ron usually around a 70. The band width is usually 400 to 600 hz. I also use the SAF to enhance the audio tone. I do miss hearing a lot of weak stations by doing this though.

Andy,
I'm curious what your filter etc. setting are. The
digital stations are S9+20 at my location but I can diminish their impact
sufficiently so it does not bother me too much. Sometimes I think that the
station just sits there beaconing and not much else. Last night there were
signals going back and forth as I could see different signal strengths. If it becomes a real problem, Ron could consider a
frequency below 7.025 MHz as digital signals are not allowed there (tongue in
cheek comment hi.. hi).
73, Tony VE3DWI.

Karl,

Yes you are correct. Going below 7.025 would exclude technicians etc. Thanks for letting me know as I never even thought about that. In Canada we do not have this kind of situation. So... forget about my proposal Ron, me bad hi.. hi.

73, Tony VE3DWI.

Space Weather News for Oct. 7, 2014
http://spaceweather.com http://spaceweather.com/

TOTAL ECLIPSE OF THE MOON: The Moon is about to pass through the shadow of Earth, producing a colorful lunar eclipse. Sky watchers in the Americas, Australia, Pacific islands and parts of Asia can expect to see the full Moon turn beautiful shades of red and turquoise for nearly an hour on Wednesday morning, Oct. 8th. Check http://spaceweather.com http://spaceweather.com/for viewing times and observing tips.

LIVE WEBCAST: Got clouds? No problem. The eclipse will be broadcast live on the web by the Coca-Cola Science Center: http://www.ccssc.org/webcast.html http://www.ccssc.org/webcast.html

Wednesday, Oct. 8, 2014
What's up in space On October 8th there will be a total eclipse of the Moon. Got clouds? No problem. The event will be broadcast live on the web http://www.ccssc.org/webcast.html by the Coca-Cola Science Center.
http://www.ccssc.org/webcast.html
QUIET SUN: Solar activity is low, and the quiet is likely to continue. Not one of the six sunspot groups on the disk of the sun has the type of unstable magnetic field that poses a threat for strong eruptions. NOAA forecasters estimate a scant 5% chance of M-flares http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=rkvo6l361rbulsrcr55fp9biq6 on Oct. 7th. Solar flare alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
DON'T MISS THE LUNAR ECLIPSE: On Wednesday morning, Oct. 8th, there will be a total lunar eclipse http://science.nasa.gov/science-news/science-at-nasa/2014/18sep_lunareclipse/. Sky watchers in the Americas, Australia and most of Asia can see the full Moon turn red as it passes through the sunset-colored shadow of Earth: visibility map http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig03.pdf. The show begins at approximately 9:15 UT (2:15 a.m. PDT) when the Moon makes first contact with the core of Earth's shadow. Totality, when the Moon is fully shadowed, begins at 10:25 UT (3:25 a.m. PDT) and lasts for nearly an hour. Resources: NASA video https://www.youtube.com/watch?v=wmCK2Pfsh0Y&feature=youtu.be, animated eclipse http://shadowandsubstance.com/, live webcast http://www.ccssc.org/webcast.html.
During the eclipse, the Moon will look like this:
http://spaceweathergallery.com/indiv_upload.php?upload_id=96673
The hue of the lunar disk may seem puzzling to some readers. Shadows are supposed to be black, yet the shadowed Moon is mostly bright red. A quick trip to the Moon explains the color:
Imagine yourself standing on a dusty lunar plain looking up at the sky. Overhead hangs Earth, nightside down, completely hiding the sun behind it. The eclipse is underway. You might expect Earth seen in this way to be utterly dark, but it's not. The rim of the planet is on fire! As you scan your eye around Earth's circumference, you're seeing every sunrise and every sunset in the world, all of them, all at once. This incredible light beams into the heart of Earth's shadow, filling it with a coppery glow and transforming the Moon into a great red orb.
Red isn't the only color, however. Sharp-eyed observers might also spot some turquoise, shown here in a photo taken by Jens Hackman during an eclipse http://spaceweather.com/eclipses/gallery_03mar07_page6.htm in March of 2007:
http://spaceweather.com/eclipses/03mar07f/Hackmann1.jpg
Its source is ozone. Atmospheric scientist Richard Keen of the University of Colorado explains: "During a lunar eclipse, most of the light illuminating the moon passes through the stratosphere where it is reddened by scattering. However, light passing through the upper stratosphere penetrates the ozone layer, which absorbs red light and actually makes the passing light ray bluer." This can be seen, he says, as a soft blue fringe around the red core of Earth's shadow.
To catch the turquoise on Oct. 8th, he advises, "look during the first and last minutes of totality. The turquoise rim is best seen in binoculars or a small telescope."

All Sky Fireball Network Every night, a network of NASA all-sky cameras http://fireballs.ndc.nasa.gov/ scans the skies above the United States for meteoritic fireballs. Automated software maintained by NASA's Meteoroid Environment Office calculates their orbits, velocity, penetration depth in Earth's atmosphere and many other characteristics. Daily results are presented here on Spaceweather.com.
On Oct. 7, 2014, the network reported 173 fireballs.

RELEASE 14-276

NASA Aeronautics Research Tests New Tool for Early Wildfire Detection

http://www.nasa.gov/sites/default/files/14-276_0.jpg

NASA researcher Mike Logan plans to use this small unmanned aerial vehicle to check for fires at a Virginia-North Carolina wildlife refuge as part of an agreement with the U.S. Fish and Wildlife Service

Image Credit:
NASA Langley/David C. Bowman

NASA's research in unmanned aerial systems (UAS) may soon provide a means for early detection and mitigation of fires in the Great Dismal Swamp National Wildlife Refuge, a nearly 50,000-square-acre region centered on the Virginia-North Carolina border.
NASA's Langley Research Center, in nearby Hampton, Virginia, has signed a one-year agreement with the Department of the Interior's U.S. Fish and Wildlife Service (FWS) to test small UASs for the detection of brush and forest fires. The research is part of the NASA Aeronautics Research Mission Directorate's UAS Integration in the National Airspace System (NAS) project.
"The U.S. Fish and Wildlife Service is evaluating the feasibility of airborne unmanned platforms and their ability to offer a safer and more cost-effective alternative for surveillance of potential areas of interest immediately following thunderstorm activity," said Great Dismal Swamp Refuge Manager Chris Lowie. "The agency hopes to see a significant decrease in cost to survey the Great Dismal Swamp, as well as a reduction in time to detect nascent fires, which could potentially save millions of dollars to the taxpayer in firefighting costs," added Lowie.
Mike Logan, the research lead at Langley, came up with the idea after a forest fire in 2011 that lasted almost four months and cost more than $10 million to extinguish. Smoke from that fire, which was caused by a lightning strike, traveled as far north as Maryland only three years after another $10-million blaze in 2008, according to FWS.
"I made a phone call to the local fire captain after days of inhaling peat bog smoke," said Logan. "I learned most fires are caused by lightning strikes and the only way they can spot them is by hiring an aircraft to do an aerial survey of the huge swamp. So I figured why not use a UAV as a fire detector?"
After approval from the Federal Aviation Administration, the team at Langley plans to fly a lightweight UAS equipped with cameras and transmitters over the wildlife refuge.
"One is an out-of-the-nose camera that can see smoke plumes as they are rising," Logan explained. "The other is an infrared camera housed in the body of the plane that points down. It can find hot spots by detecting heat signatures."
Although the aircraft can fly as fast as 40 miles an hour, when used in this capacity it will be flown slower while it transmits video, allowing individuals on the ground to observe what is occurring in the live video. The transmissions can be viewed on a laptop

computer in a mobile ground station.
Logan says the drone, which weighs about 15 pounds and has an almost six-foot wingspan, has a range of about eight miles and can stay aloft as long as an hour, before the batteries need recharging. The aircraft also can be programmed to fly on its own, but a safety pilot will monitor operations during the tests.
“This kind of application for unmanned aerial systems shows just one public benefit,” said Dave Hinton, Langley associate director for UAS technologies and applications. “They can be used to detect fires or locate people who are lost.”
For more about the Great Dismal Swamp Wildlife Refuge, go to:

Hi all,

Conditions were not too bad this afternoon with 34 stations checking in. Thank you Condy NI4Z who told me, when I started, that I was on LSB. Thanks for the relay stations Ted N8TJE and the station that relayed NI2F in to me. After 30 check-ins, Ted asked me if XT had checked in and I said "No I have not heard" ***pause*** Then he said "I mean MXT". That's when it dawned to me that he meant Marianne VE3MXT my spouse. Wow, how could I forget her: Duuuh. So she called in when I gave her the Green light hi... hi.

Great to hear all the stations who took the time to check-in. It was especially nice to have Ron WB1HGA check in on SSB. Ron is Net Control for the Monday and Wednesday night CW nets and it was a treat to talk to him on voice. C U all later.

73, Tony VE3DWI.

By Miles Mann WF1F,

MAREX-NA (Manned Amateur Radio Experiment, North American Division)

Space Station Alpha on 2-meters
Yesterday the International space Station Alpha began testing the crew's new Amateur Radio station on the 2-meter band. The Amateur Radio station is used by the ISS crews during their fee time to provide the crews with an extra way to entertain them selves and to talk to school children during pre-arranged school schedules. The Russians have been using Amateur radio on Mir since 1988 and have found it to be very beneficial for crews on long duration missions. The Mir Amateur radio was even used as a emergency comminations link on many occasions, and I have even heard rumors the amateur radio link on the NASA Shuttle was used to inform the Shuttle crew of an antenna switch problem which disconnected the Shuttle from the normal voice channels.

The testing of the Amateur radio station initially took place while ISS was over Russia during two prearranged test orbits.
1 pass 6:17 - 6:25 UTC (9:17-9:25 MSK)
2 pass 8:53 - 9:03 UTC

The Amateur Radio station on ISS consists of a commercial grade hand held radio called a HT. The radio operates in the ITU satellite portion of the amateur radio 2-meter band 144.000 - 146.000. The exact frequencies used during the test are of course a closely guarded secret, however when testing is completed the radio will be placed on one of the published public channels. The ISS Amateur Radio station is not currently open to the public at this time.

Russian view of the test
The club station R3K at RSA Energia in Korolev Russia (near Moscow) was equipped with two different 2-meter radio stations to simulate typical amateur radio home stations. One station is what we call an Oscar class station and the other a typical home station.

Station #1
Transceiver, Oscar Class 180 watts RF FM. Antenna 20 element Circular polarized, gain approximately 9+ dBd, Approximate ERP 1440 watts.

Station #2
Transceiver, Mobile Class 50 watts RF FM. Antenna, Vertical collinear 7 meters in length, gain approx 6 dBd, Approximate ERP 200 watts.

The first pass test used the big station #1. This orbit was a low orbit pass, only getting 28 degrees above the horizon, and its closest approach to the station was just over 700 kilometres. Cosmonaut Musa U2MIR was to be the first person in the club station to make the contact, however Musa was a little late for the schedule. So the task fell upon Sergej Samburov RV3DR to make the first contact with ISS via Amateur Radio. (Sergej Samburov is also the manager of the club station at RSA and the club station on ISS.). The initial contact took place on schedule and the microphone was quickly passed around the room to the other present, including Vladimior Zagainov, UA3DKR and Eugene Labutin, RA3APR. The audio and signal quality were excellent, we use the term DFQ, Darn Full Quieting. The contact lasted 10 minutes as the space station travelled from horizon to horizon. A strong signal was maintained during the whole 2-way conversation.

The second test orbit used the lower power station with a smaller antenna. This orbit was also a low orbit pass, only getting 28 degrees above the horizon, and its closest approach

to the station was just over 700 kilometres. On occasions you may get an orbit directly over your house and the station will be only 400 kilometres away. The signal quality was noticeably lower and there was considerable noise on the signal during the beginnings and end of the 10 communications pass. The difference in signal strength was primarily because of the lower gain antenna on the club station. The bigger the antenna, the more signal you can pull in. The ISS crew and club station member enjoyed another 10 minute conversation and declared the initial voice testing of the Amateur Radio station a success. Cosmonaut Mikhail Turn was present during the testing. It will be Mikhail job to install the new Amateur Radio antenna on ISS during his expedition 3 ISS mission in 2001.

After the test Sambrov and I discuss the signal quality and compared it to the Russian Space station Mir. The Mir station had a slightly better antenna and it had the ability to select different transmitter power levels with the Kenwood TM-733 settings of 5,10 and 50 watts output. To help conserve power, the Mir station was usually kept on the 5 watt setting. The signal quality results of this ISS test were similar to signal quality reports from Mir, when Mir was using the 5-watt setting. The ISS transceiver has an estimated ERP transmitter value of 1.5 watts. These results are still preliminary. However, it looks like stations with a zero gain antenna will be able to hear ISS and will be able to establish 2-way connections on good close orbit passes. Sergej then said, there are plans to upgrade the antenna system on ISS during expedition #3 mission, with an antenna system specifically designed for the amateur radio bands. There are also tentative plans to upgrade the transceiver on ISS to a 50-watt class transceiver (pending many approvals).

For more information on this mission please check the NASA web pages.

ISS ALPHA Visibility
The NASA web page has a program, which will calculate the potential for being able to visually see the ISS ALPHA as it passes over your city. They have a listings for many different cities and countries. http://spaceflight.nasa.gov/realdata/sightings/
http://spaceflight.nasa.gov/realdata/sightings/cities/index.cgi

International Space Station Alpha Amateur Radio Call signs
The ISS ALPHA is keeping the international flair by hosting several amateur radio call signs from around the world, and the list keeps growing. So far the ISS ALPHA has 4 calls signs from three different countries, Russia, USA and Germany. Also each of the crewmembers of expedition 1 has their own personal Amateur Radio call sign. One NASA engineer sent a message to the ISS crew saying, "You guys can use what ever [Amateur Radio] call sign you want."

William Shepherd, Expedition commander, KD5GSL
Yuri Gidzenko, Soyuz commander (pending)
Sergei Krikalev, flight engineer, U5MIR
Russian Module call sign: RZ3DZR
Other club call signs ISS used: RS0ISS, NA1SS and DL0ISS ALPHA

Suggested receiving station
Casual listening for ISS ALPHA and Mir 2-meter vertical or scanner antenna (0 dBd or better). Police scanner or amateur radio with the ability to receive in the 144 - 146 mc or MHz range, FM mode. Antenna cable should be a low loss RG-8 style cable less than 100 feet long (RG-213 best choice). You will not need to mount the antenna very high, just try to get above the roof ridgeline. And of course you will need to find / buy a satellite tracking program. I recommend the InstantTrack 1.5. It's a simple easy to use program, which can be purchased from Amsat. http://www.amsat.org/amsat/instanttrack/

http://www.amsat.org/amsat/instanttrack/

ISS ALPHA frequencies
The Amateur Radio frequencies for ISS ALPHA have been posted.
Worldwide downlink for voice and packet: 145.800
Worldwide packet uplink: 145.990
Region 1 voice uplink: 145.200
Region 2 & 3 voice uplink: 144.490

You will need to dig out the manual for your radio and program in the following frequency combinations. Note that some of the older FM mobile and Walkie-talkie HT style radios over 15 years old may have some difficulty in saving these combinations into memory. The channels listed below will help you compensate for the speed of the space station, called Doppler. If the smallest channel step your radio supports is 5k, then only program in channels 2, 5 and 8. If your radio supports the smaller 2.5k channel step, then program in all channels listed. After you have determined your smallest channel step supported by your radio, then program in the channels. You can either use the procedures for storing ODD-Splits or you can reprogram your repeater off set for each of the channels and then save the new combination in a new memory location. This channel procedure has been successfully used on the Mir Amateur Radio program for years and is the choice of usage for school schedules (you do not want to fiddle with VFO's during a 10-minute pass). I also recommend you program in all channels, no mater what part of the world you live in. The World Map ISS ALPHA location display used by the ISS ALPHA crew is not located next to the Amateur Radio station.

Voice operations Region 2 & 3 (North and South America and Pacific)
Chan Receive Transmit Offset (Meg)
1 145.802.5 144.487.5 -1.315
2 145.800.0 144.490.0 -1.310
3 145.798.5 144.492.5 -1.306

Packet operations Regions 1, 2 & 3 (Europe, North and South America and Pacific)
Chan Receive Transmit Offset (Meg)
4 145.802.5 145.987.5 +0.185
5 145.800.0 145.990.0 +0.190
6 145.798.5 145.992.5 +0.194

Voice operations Region 1 (Europe)
Chan Receive Transmit Offset (Meg)
7 145.802.5 145.197.5 -0.605
8 145.800.0 145.200.0 -0.600
9 145.798.5 145.202.5 -0.596

Usage Example
Lets assume ISS ALPHA is approaching for a good 10 minute over head pass, running Packet. When ISS ALPHA comes over the horizon the Doppler frequency error will initially be 3.5k plus 145.990 = 145.993.5. This means the frequency ISS ALPHA will appear to be transmitting on is 145.993.5. Set your radio to channel #4 for the first 3 minutes of the pass. Then for the next 3 minutes use channel #5 and for the last three minutes use channel #6. Follow the same procedure for Voice operations. Since we are using the Mode FM, we do not have to have our Transmit and receive frequency exactly on frequency. We can be off frequency 1-2 kHz and still get reliable Voice and Data. The MAREX-NA team has been using this procedure for 10 years with excellent results.

QSL card
A QSL card is a post card, which you can request to confirm you made a two-way or heard the crew on the Amateur Radio band. The QSL procedure for ISS ALPHA is under development, please check the AIRSS web pages for the latest updates and QSL procedures for ISS ALPHA. http://www.arrl.org/ARISS/ariss-qsl.html http://www.arrl.org/ARISS/ariss-qsl.html

Ron,
Right after Ted N8TJE checked in you went from S9 to barely above the noise. I noticed that you had a fair amount of either contact bounce or a loose connection somewhere. The "Dits" were at times sounding like machine gun fire hi.. hi. Good to hear you again.

Hi all,

Conditions were not too bad this afternoon with 34 stations checking in. Thank you Condy NI4Z who told me, when I started, that I was on LSB. Thanks for the relay stations Ted N8TJE and the station that relayed NI2F in to me. After 30 check-ins, Ted asked me if XT had checked in and I said "No I have not heard" ***pause*** Then he said "I mean MXT". That's when it dawned to me that he meant Marianne VE3MXT my spouse. Wow, how could I forget her: Duuuh. So she called in when I gave her the Green light hi... hi.

Great to hear all the stations who took the time to check-in. It was especially nice to have Ron WB1HGA check in on SSB. Ron is Net Control for the Monday and Wednesday night CW nets and it was a treat to talk to him on voice. C U all later.

73, Tony VE3DWI.

Subject: [ten_tec_radio_net] Wed. Oct. 08-2014 20 mtr SSB TEN-TEC Net.

Hi all,

Conditions were not too bad this afternoon with 34
stations checking in. Thank you Condy NI4Z who told me, when I started,
that I was on LSB. Thanks for the relay stations Ted N8TJE and the station
that relayed NI2F in to me. After 30 check-ins, Ted asked me if XT had
checked in and I said "No I have not heard" ***pause*** Then he said
"I mean MXT". That's when it dawned to me that he meant Marianne
VE3MXT my spouse. Wow, how could I forget her: Duuuh. So she called
in when I gave her the Green light hi... hi.

Great to hear all the stations who took the time to
check-in. It was especially nice to have Ron WB1HGA check in on SSB.
Ron is Net Control for the Monday and Wednesday night CW nets and it was a treat
to talk to him on voice. C U all later.

73, Tony VE3DWI.

Wednesday OCT-08-2014 20 mtr TEN-TEC SSB net.

Interesting.
I think I have a loop problem.
Going to check all RF cable runs.
Thank you for that info.

Ron,
Right after Ted N8TJE checked in you went from S9 to
barely above the noise. I noticed that you had a fair amount of either
contact bounce or a loose connection somewhere. The "Dits" were at times
sounding like machine gun fire hi.. hi. Good to hear you
again.
73, Tony VE3DWI.

Hi Steve,

Sorry to miss you. Conditions were good for a while. Ted N8TJE was doing some relaying for me but there were several times he disappeared all together and he couldn't hear me either. Some times I wonder if I should just use 100 Watt like most stations. I now run around 500 Watt but that causes some stations to hear me while I can't hear them. Oh well, we can't win em all I guess. Hope to hear you next time.

73, Tony VE3DWI.

Hi all,

Conditions were not too bad this afternoon with 34 stations checking in. Thank you Condy NI4Z who told me, when I started, that I was on LSB. Thanks for the relay stations Ted N8TJE and the station that relayed NI2F in to me. After 30 check-ins, Ted asked me if XT had checked in and I said "No I have not heard" ***pause*** Then he said "I mean MXT". That's when it dawned to me that he meant Marianne VE3MXT my spouse. Wow, how could I forget her: Duuuh. So she called in when I gave her the Green light hi... hi.

Great to hear all the stations who took the time to check-in. It was especially nice to have Ron WB1HGA check in on SSB. Ron is Net Control for the Monday and Wednesday night CW nets and it was a treat to talk to him on voice. C U all later.

73, Tony VE3DWI.

Tony,
It just depends on conditions. I run 500 watts, but I only have an OCF dipole so I can't point it toward you. I think it's best to have a strong net control station, rather than the other way around. I'll keep trying.

Steve K9DY

# 3333. Scouting's 57th Jamboree On The Air Takes Place October 18-19

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-10 02:10:25 UTC
From: n2kpc@...
Topic: 3333  Message: 3333

I will be on the air Oct. 18 at 9:))AM from Rosedale Park in NJ on 28440 and 14325 with the Scouts with a Eagle and a Omni 7.
Please stop in and work future Hams.
73,
Lloyd N2KPC PR

Scouting's 57th Jamboree On The Air Takes Place October 18-19
Scouting's 2014 Jamboree On The Air (JOTA http://www.scouting.org/jota.aspx) is set for the October 18-19 weekend. The annual event links Scouts around the world via Amateur Radio. More than a half million Scouts and Guides get together over the airwaves each third weekend of October for JOTA. According to the World Scout Bureau, JOTA is the largest Scouting event in the world, with nearly 750,000 Scouts participating from 6000 stations in 150 countries around the world. Scouts of any age can participate, from Cub Scouts to Boy Scouts and Venture crew members. Not a contest, JOTA's goal is to foster Scout-to-Scout communication across borders and oceans. "The idea is to contact other Scout stations and allow as many Scouts as possible to talk to other Scouts and learn about who they are and what they are doing," the Boy Scouts of America http://www.scouting.org/ has said in its JOTA guidelines http://www.scouting.org/jota/operators_guides.aspx, which offer suggested frequencies. On-the-air exchanges typically include such information as name, location, Scout rank, age, and hobbies, but the conversation can certainly go beyond that. Amateur Radio licensees should be aware that international third-party traffic agreements http://www.arrl.org/third-party-operating-agreements may prohibit direct person-to-person communication between unlicensed individuals in certain other countries. In those cases, the station control operator may serve as an intermediary. Licensed mentors often open their stations to Scouts on JOTA weekend, serving as control operators. Radio operation will be on 80 through 6 meters, all modes, and 2 meters and 70 centimeters FM simplex. Upward of 14,000 stations were on the air for JOTA 2013. A JOTA participant patch is available, as is a certificate/log sheet that can also be used to fulfill a Radio merit badge requirement. JOTA 2014 gets underway on Saturday, October 18, at 0000 local time and concludes on Sunday, October 19, at 2400 local time. The ARRL website also has information http://www.arrl.org/jamboree-on-the-air-jota on JOTA. JOTA Founder Les Mitchell, G3BHK, SK
With JOTA http://www.scouting.org/jota.aspx 2014 a little more than 1 week away comes word that its "founding father," Les Mitchell, G3BHK, died on October 6. Mitchell started JOTA in 1958, after launching the idea a year earlier at the World Scout Jamboree. That was the first year the Jamboree had an Amateur Radio station on site, and it's had one at every World Scout Jamboree since. Mitchell realized that many scout leaders also were hams, and that it would be possible to arrange a "Jamboree On The Air."
JOTA Founder Les Mitchell, G3BHK.

"Little did I think when I drew up the plans and rules for the first event in 1958 that its popularity would increase and spread around the world," Mitchell reminisced in 2000. "Even more astonishing is the fact that after all this time it still holds its popularity. In fact it has become the largest international Scout event ever." Mitchell said that far fewer Scouts were licensed in 1958, but over the years Scouts taking part in JOTA got so interested that they became radio amateurs themselves. "JOTA is great fun," Mitchell said,

adding, "If you put nothing into the event you may get nothing out of it! JOTA is your chance to speak to Scouts and Guides over the horizon. Silence makes no friends!"

# 3334. NASA Science Fleet Prepares for Mars Comet

NASA Science Fleet Prepares for Mars Comet

Oct. 9, 2014: NASA’s extensive fleet of science assets, particularly those orbiting and roving Mars, have front row seats to image and study a once-in-a-lifetime comet flyby http://science.nasa.gov/science-news/science-at-nasa/2014/12aug_marscomet/ on Sunday, Oct. 19.
Comet C/2013 A1, also known as comet Siding Spring, will pass within about 87,000 miles (139,500 kilometers) of the Red Planet -- less than half the distance between Earth and our moon and less than one-tenth the distance of any known comet flyby of Earth.
http://www.nasa.gov/sites/default/files/thumbnails/image/14-282.jpg Image Credit: NASA

Siding Spring’s nucleus will come closest to Mars around 2:27 p.m. EDT, hurtling at about 126,000 mph (56 kilometers per second). This proximity will provide an unprecedented opportunity for researchers to gather data on both the comet and its effect on the Martian atmosphere.
“This is a cosmic science gift that could potentially keep on giving, and the agency’s diverse science missions will be in full receive mode,” said John Grunsfeld, astronaut and associate administrator for NASA’s Science Mission Directorate in Washington. “This particular comet has never before entered the inner solar system, so it will provide a fresh source of clues to our solar system's earliest days.”
http://science.nasa.gov/mailing-lists/subscribe/
Siding Spring came from the Oort Cloud, a spherical region of space surrounding our sun and occupying space at a distance between 5,000 and 100,000 astronomical units. It is a giant swarm of icy objects believed to be material left over from the formation of the solar system.
Siding Spring will be the first comet from the Oort Cloud to be studied up close by spacecraft, giving scientists an invaluable opportunity to learn more about the materials, including water and carbon compounds, that existed during the formation of the solar system 4.6 billion years ago.
Some of the best and most revealing images and science data will come from assets orbiting and roving the surface of Mars. In preparation for the comet flyby, NASA maneuvered its Mars Odyssey orbiter, Mars Reconnaissance Orbiter (MRO), and the newest member of the Mars fleet, Mars Atmosphere and Volatile EvolutioN (MAVEN), in order to reduce the risk of impact with high-velocity dust particles coming off the comet.
https://www.youtube.com/watch?v=2R4yj7DtQbM&feature=youtu.be Click to see the ScienceCast video: Colliding Atmospheres: Mars vs. Comet Siding Spring
https://www.youtube.com/watch?v=2R4yj7DtQbM&feature=youtu.be

The period of greatest risk to orbiting spacecraft will start about 90 minutes after the closest approach of the comet's nucleus and will last about 20 minutes, when Mars will come closest to the center of the widening trail of dust flying from the comet’s nucleus.
"The hazard is not an impact of the comet nucleus itself, but the trail of debris coming from it. Using constraints provided by Earth-based observations, the modeling results indicate that the hazard is not as great as first anticipated. Mars will be right at the edge of the debris cloud, so it might encounter some of the particles -- or it might not," said Rich Zurek, chief scientist for the Mars Exploration Program at NASA's Jet Propulsion

Laboratory (JPL) in Pasadena, California.
The atmosphere of Mars, though much thinner that Earth's, will shield NASA Mars rovers Opportunity and Curiosity from comet dust, if any reaches the planet. Both rovers are scheduled to make observations of the comet.
NASA’s Mars orbiters will gather information before, during and after the flyby about the size, rotation and activity of the comet's nucleus, the variability and gas composition of the coma around the nucleus, and the size and distribution of dust particles in the comet's tail.
Observations of the Martian atmosphere are designed to check for possible meteor trails, changes in distribution of neutral and charged particles, and effects of the comet on air temperature and clouds. MAVEN will have a particularly good opportunity to study the comet, and how its tenuous atmosphere, or coma, interacts with Mars' upper atmosphere.
Earth-based and space telescopes, including NASA’s iconic Hubble Space Telescope, also will be in position to observe the unique celestial object. The agency’s astrophysics space observatories -- Kepler, Swift, Spitzer, Chandra -- and the ground-based Infrared Telescope Facility on Mauna Kea, Hawaii -- also will be tracking the event.
NASA’s asteroid hunter, the Near-Earth Object Wide-field Infrared Survey Explorer (NEOWISE), has been imaging, and will continue to image, the comet as part of its operations. And the agency’s two Heliophysics spacecraft, Solar TErrestrial RElations Observatory (STEREO) and Solar and Heliophysics Observatory (SOHO), also will image the comet. The agency’s Balloon Observation Platform for Planetary Science (BOPPS), a sub-orbital balloon-carried telescope, already has provided observations of the comet in the lead-up to the close encounter with Mars.
Images and updates will be posted online before and after the comet flyby. Several pre-flyby images of Siding Spring, as well as information about the comet and NASA’s planned observations of the event, are available online at

Ron, et al

I think that 7.122 would be a good place for the CW Net.

Around 7.100 you can still hear some digital stations (used to be anyway).
Huh, I'm parked on 7.100 now..and I can hear what sounds to be Packet, case in point.

7.122 would be above that, and 3 kc below Phone.

All in all, I don't think that we could do any better @ 7.122 IMHO.

Roger / KI8DU in WV

Gonzalo (Atlantic Ocean)

October 12, 2014

http://www.nasa.gov/sites/default/files/gonzalo-goes-sunda_copy_0.jpg

The GOES East satellite captured a visible image of two storms in the Atlantic at 2:45 p.m. EDT, a smaller Gonzalvo east of the Leeward Islands while Fay was northeast of Bermuda.

Image Credit:
NASA/NOAA GOES Project

NASA Sees Newborn Tropical Storm Gonzalo form and Threaten Caribbean Islands
Tropical Storm Gonzalo formed quickly on Oct. 12 just east of the Leeward Islands, triggering tropical storm warnings for many islands. NOAA's GOES-East satellite captured an image of the newborn storm on Sunday, Oct. 12, and Tropical Storm Fay northeast of Bermuda.
The GOES East satellite is a geostationary satellite managed by NOAA. At NASA's Goddard Space Flight Center in Greenbelt, Maryland the NASA/NOAA GOES Project creates images and animations and today's visible image, taken at 2:45 p.m. EDT showed a smaller Gonzalvo east of the Leeward Islands while Fay was northeast of Bermuda.
A Tropical Storm Warning is in effect for Guadeloupe, Desirade, Les Saintes, Marie Galante, St.Martin, St. Barthelemy, St.Maartin, Saba, St. Eustatius, Barbuda, Antigua, Anguilla, St. Kitts, Nevis, Montserrat A Tropical Storm Watch in effect for Puerto Rico, Vieques, Culebra, U.S. Virgin Islands and the British Virgin Islands. A tropical storm warning means that tropical storm conditions are expected somewhere within the warning area...in this case within the next 24 to 36 hours.
On Sunday, Oct. 12 at 1:30 p.m. EDT, Tropical Storm Gonzalo had maximum sustained winds near 40 mph (65 kph) and is expected to strengthen over the next two days. Gonzalo was about 200 miles (320 km) east of Guadeloupe and 230 miles (370 km) east-southeast of Antigua, near latitude 16.4 north and longitude 58.4 west. Gonzalo was moving to the west at 10 mph (17 kph) and is expected to continue in that direction for the next two days before turning to the west-northwest.
The National Hurricane Center expects Gonzalo to move through the Leeward Islands early Monday morning, Oct. 12.
Tropical storm conditions are possible within the watch area by Monday night and Tuesday morning. Tropical Storm Gonzalo is expected to produce total rainfall accumulations of 4 to 8 inches across the Leeward Islands...British and U.S. Virgin Islands and Eastern Puerto Rico with isolated maximum totals of 12 inches possible. Swells generated by Gonzalo will affect the Leeward Islands tonight and Monday morning from Dominica northward and affect the U.S. and British Virgin islands by Monday afternoon. These swells are likely to cause life-threatening surf and rip current conditions.

Fay (Atlantic Ocean)

October 12, 2014

http://www.nasa.gov/sites/default/files/fay-goes-sunday_0.jpg

On Sunday, Oct. 12, NOAA GOES-East satellite saw Fay near Bermuda and clouds associated with a cold front over the U.S. that are expected to absorb Fay sometime on Monday, Oct. 13.

Image Credit:
NASA/NOAA GOES Project

Satellite Sees Cold Front Headed to Absorb Bermuda's Tropical Storm Fay
Tropical Storm Fay is affecting Bermuda on Sunday, Oct. 12, but a cold front over the eastern U.S. is expected to absorb the storm over the next day or two. Both were seen in an image from NOAA's GOES-East satellite.
On Saturday, Oct. 11, Tropical Depression 7 became Tropical Storm Fay in the Atlantic. By Oct. 12, Fay was nearing hurricane strength while it was less than 100 miles from Bermuda. NOAA's GOES-East satellite captured an image of the storm.
On Sunday, Oct. 12, Bermuda was placed under a Hurricane Watch and Tropical Storm Warning as Fay neared. NOAA GOES-East satellite provided an image of Fay near Bermuda that showed clouds associated with a cold front over the U.S. that are expected to absorb Fay sometime on Monday, Oct. 13. The image was created by the NASA/NOAA GOES Project at NASA's Goddard Space Flight Center in Greenbelt, Maryland.

Youtube Override:

This animation of imagery from NOAA GOES-East satellite from Oct. 10-12 shows the movement of Tropical Storm Fay in the Atlantic an approaching cold front over the eastern U.S.

Image Credit:
NASA/NOAA GOES Project

At 8 a.m. EDT on Saturday, October 11, 2014, the center of tropical storm fay was located near latitude 27.1 north and longitude 65.2 west. The storm was moving toward the north near 12 mph. Maximum sustained winds were near 60 mph.
Twenty four hours later on Sunday, Oct. 12, Fay's maximum sustained winds were near hurricane-strength at 70 mph (110 kph), although little change in strength is forecast during the next 24 Hours. Fay is expected to become a post-tropical cyclone at night (on Oct. 12).
The center of tropical storm fay was near latitude 33.4 north and longitude 63.9 west, just about 85 miles (140 km) north-northeast of Bermuda. Fay was moving toward the north-northeast near 20 mph (31 kph) and the National Hurricane Center forecasts a turn toward the east-northeast and faster forward movement. On the forecast track, the center of Fay will continue to move away from Bermuda today.
By Monday, Oct. 12, Fay is expected to be absorbed by a cold front.

For an updated forecast, visit; www.nhc.noaa.gov http://www.nhc.noaa.gov/.

http://www.nasa.gov/sites/default/files/subtropical7-airs-10-10-14_copy_0.jpg

NASA's Aqua satellite captured data on developing Subtropical Depression 7 on Oct. 10 at 1:41 a.m. EDT and saw some strong thunderstorms around the developing center with cloud top temperatures near -63F/-53C (purple).

Image Credit:
NASA JPL, Ed Olsen

http://www.nasa.gov/sites/default/files/subtropical7-goes-101014.jpg

NOAA's GOES-East satellite captured this visible image of Subtropical Depression 7 on Oct. 10 at 14:45 UTC (10:45 a.m. EDT) about 600 miles south of Bermuda.

Image Credit:
NASA/NOAA GOES Project

NASA Sees Birth of Atlantic's Subtropical Depression 7: Bermuda on Watch
The seventh depression of the Atlantic Ocean Hurricane Season was born on Oct. 10, but it's subtropical. NASA's Aqua satellite looked at the developing depression in infrared light and saw strong thunderstorms within.
The Atmospheric Infrared Sounder or AIRS instrument aboard NASA's Aqua satellite captured data on developing Subtropical Depression 7 on Oct. 10 at 05:41 UTC (1:41 a.m. EDT). AIRS identified several areas of strong thunderstorms around the developing center of circulation. Some of those thunderstorms were high in the troposphere with cloud top temperatures near -63F/-53C and had the potential for dropping heavy rainfall. The circulation continued to organize after Aqua passed by and a depression formed.
A Tropical Storm Watch was posted at 11 a.m. EDT on Oct. 10 for Bermuda. The National Hurricane Center noted that tropical storm conditions are possible on Bermuda late Saturday, Oct. 11 or on Sunday, Oct. 12.
A subtropical cyclone, which is what this depression is, is different from a tropical depression. Here's how the National Hurricane Center distinguishes subtropical from tropical: A subtropical cyclone, like Subtropical Depression 7, "is a non-frontal low-pressure system that has characteristics of both tropical and extra-tropical cyclones. Like tropical cyclones, they are non-frontal, synoptic or large-scale cyclones that originate over tropical or subtropical waters, and have a closed surface wind circulation about a well-defined center. In addition, they have organized moderate to deep convection (development of clouds and thunderstorms from rising air), but lack a central dense overcast. Unlike tropical cyclones, subtropical cyclones derive a significant proportion of their energy from baroclinic sources, and are generally cold-core in the upper troposphere, often being associated with an upper-level elongated low pressure area or trough. In comparison to tropical cyclones, these systems generally have a radius of maximum winds occurring relatively far from the center (usually greater than 60 nautical miles), and generally have a less rounded (symmetric) wind field and distribution of convection."
At 11 a.m. EDT the center of subtropical depression Seven was located near latitude 23.8 north and longitude 63.7 west. That puts the center of Subtropical Depression 7 about 590 miles (950 km) south of Bermuda. Maximum sustained winds are near 35 mph (55 kph) with

higher gusts. Some strengthening is forecast and the depression is forecast to become a subtropical storm later today.
Subtropical Depression 7's estimated minimum central pressure is 1005 millibars. The depression is moving toward the northwest near 10 mph (17 kph). A gradual turn toward the north, followed by a turn toward the northeast on Sunday.

I have heard from a dozen people here on the ten_tec_radio_net Group and on my email informing me that they did not receive any Certificates in the past several weeks.

My question was, "please post here if you received any Certificates in the past few weeks".

Nobody replied saying they did receive any Certificates. I have a lot of patience with our net members, but my patience with Ian King is running very thin right now.

I have been on the phone with him on several occasions and he even emailed a copy of the new Certificates to me for my approval several weeks ago.

I am going to call him and hope I do not have to call RF Concepts to get the ball rolling. All of you deserve better action.

We can really and truly appreciate what Jim Wharton did for us with the Certificates being mailed out on a weekly basis.

Ian, I am contacting you on behalf of the TEN-TEC net members, who are very disappointed that they have not received their Certificates.

We have talked on the phone several times and you even sent a copy of the new Certificates to me several weeks ago.

Some are saying that they want to contact RF CONCEPTS to find out why the Certificates are not being sent out. I told them to hold off until I contacted you first.

Please contact me if there is a problem. Thank you.

CC: John,

I apologize for the delay.  The TEN-TEC net program is important to RF Concepts as an organization and we appreciate all of your hard work.  The certificates for the past few months (excluding this week) have been printed and are in the process of being signed by Ken Long, our CEO.  RF Concepts is a decentralized organization and our operations span multiple states.  The process of getting these certificates printed, physically signed and mailed takes longer than it did when Jim was running this program.  In the future we'll seek to stream-line this process.

Thank you for your patience.  The certificates will be sent in the next day or two.

Best regards,

Ian King

Director of Marketing & Web Technology

RF Concepts

Hello to Ian King and Thank You and RF Concepts for your hard work and time
and support of the TEN-TEC Nets.
Thank You John, K3UR for the Very Big Job that you do day in and day out
for all of us and doing your very best for all concerned.
I know that a great deal happens behind the scence to keep everything running as smooth as possible all the way around.
It is not a easy thing to do no matter who does it.
It makes it harder for Ian King because it is more work without more pay.
I would like him to know that what he and the CEO of RF Concepts Ken Long
and the Staff of TEN-TEC do for us all is a Blessing and a JOB WELL DONE.
I want to thank the Staff at RF Concepts for the help and support of the TEN-TEC Nets that we so much enjoy ever week.
For John,K3UR without pay I support him anyway that I can to help make his UNPAID JOB that HE does for everybody better.
I want to that everybody for all the support you give to the TEN-TEC Nets, John, K3UR and myself.
We Thank You and YOU have made the TEN-TEC Nets and Family a Great Net.
73,
Lloyd N2KPC
Net Control, Relay Net Control, Assistant Net Manager, Public Relations for John, K3UR and the TEN-TEC Nets and here for all of the TEN-TEC Family.
Please keep Jim Wharton and his Family in your Prayers.
He has the hardest job of all.
We wish them healing, health, and togetherness in peace, Amen.

# 3367. First look at a storm of energetic solar particles at Mars,

October 14, 2014

RELEASE 14-285

NASA Mission Provides Its First Look at Martian Upper Atmosphere

http://www.nasa.gov/sites/default/files/14-285_maven_0.png

Three views of an escaping atmosphere, obtained by MAVEN’s Imaging Ultraviolet Spectrograph. By observing all of the products of water and carbon dioxide breakdown, MAVEN's remote sensing team can characterize the processes that drive atmospheric loss on Mars.

Image Credit:
University of Colorado/NASA

NASA's Mars Atmosphere and Volatile Evolution (MAVEN) spacecraft has provided scientists their first look at a storm of energetic solar particles at Mars, produced unprecedented ultraviolet images of the tenuous oxygen, hydrogen, and carbon coronas surrounding the Red Planet, and yielded a comprehensive map of highly-variable ozone in the atmosphere underlying the coronas.

The spacecraft, which entered Mars' orbit Sept. 21, now is lowering its orbit and testing its instruments. MAVEN was launched to Mars in November 2013, to help solve the mystery of how the Red Planet lost most of its atmosphere.

"All the instruments are showing data quality that is better than anticipated at this early stage of the mission," said Bruce Jakosky, MAVEN Principal Investigator at the University of Colorado, Boulder. "All instruments have now been turned on -- although not yet fully checked out -- and are functioning nominally. It's turning out to be an easy and straightforward spacecraft to fly, at least so far. It really looks as if we're headed for an exciting science mission."

Solar energetic particles (SEPs) are streams of high-speed particles blasted from the sun during explosive solar activity like flares or coronal mass ejections (CMEs). Around Earth, SEP storms can damage the sensitive electronics on satellites. At Mars, they are thought to be one possible mechanism for driving atmospheric loss.

A solar flare on Sept. 26 produced a CME that was observed by NASA satellites on both sides of the sun. Computer models of the CME propagation predicted the disturbance and the accompanying SEPs would reach Mars on Sept. 29. MAVEN's Solar Energetic Particle instrument was able to observe the onset of the event that day.

"After traveling through interplanetary space, these energetic particles of mostly protons deposit their energy in the upper atmosphere of Mars," said SEP instrument lead Davin Larson of the Space Sciences Laboratory at the University of California, Berkeley. "A SEP event like this typically occurs every couple weeks. Once all the instruments are turned on, we expect to also be able to track the response of the upper atmosphere to them."

The hydrogen and oxygen coronas of Mars are the tenuous outer fringe of the planet's upper atmosphere, where the edge of the atmosphere meets space. In this region, atoms that were once a part of carbon dioxide or water molecules near the surface can escape to space.

These molecules control the climate, so following them allows us to understand the history of Mars over the last four billion years and to track the change from a warm and wet climate to the cold, dry climate we see today. MAVEN observed the edges of the Martian atmosphere using the Imaging Ultraviolet Spectrograph (IUVS), which is sensitive to the sunlight reflected by these atoms.

"With these observations, MAVEN's IUVS has obtained the most complete picture of the extended Martian upper atmosphere ever made," said MAVEN Remote Sensing Team member Mike Chaffin of the University of Colorado, Boulder. "By measuring the extended upper atmosphere of the planet, MAVEN directly probes how these atoms escape to space. The observations support our current understanding that the upper atmosphere of Mars, when compared to Venus and Earth, is only tenuously bound by the Red Planet's weak gravity."

IUVS also created a map of the atmospheric ozone on Mars by detecting the absorption of ultraviolet sunlight by the molecule.

"With these maps we have the kind of complete and simultaneous coverage of Mars that is usually only possible for Earth," said MAVEN Remote Sensing Team member Justin Deighan of the University of Colorado, Boulder. "On Earth, ozone destruction by refrigerator CFCs is the cause of the polar ozone hole. On Mars, ozone is just as easily destroyed by the byproducts of water vapor breakdown by ultraviolet sunlight. Tracking the ozone lets us track the photochemical processes taking place in the Martian atmosphere. We'll be exploring this in more complete detail during MAVEN's primary science mission."

There will be about two weeks of additional instrument calibration and testing before MAVEN starts its primary science mission. This includes an end-to-end test to transmit data between NASA's Curiosity rover on the surface of Mars and Earth using the MAVEN mission's Electra telecommunications relay. The mission aims to start full science gathering in early to mid-November.

MAVEN's principal investigator is based at the University of Colorado's Laboratory for Atmospheric and Space Physics. The university provided two science instruments and leads science operations, as well as education and public outreach, for the mission. The University of California at Berkeley's Space Sciences Laboratory also provided four science instruments for the mission. NASA's Goddard Space Flight Center in Greenbelt, Maryland manages the MAVEN project and provided two science instruments for the mission. Lockheed Martin built the spacecraft and is responsible for mission operations. NASA's Jet Propulsion Laboratory in Pasadena, California provides navigation and Deep Space Network support, as well as the Electra telecommunications relay hardware and operations

# 3368. Jamboree On The Air (JOTA) Starting Sat. 10-18-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-15 03:16:54 UTC
From: n2kpc@...
Topic: 3368  Message: 3368

Please Read and mark it on ur calander, set ur alarm clock, tell ur loved one to remind u, tie a sting around ur finger, put a note on the bathroom mirror, put a note on the coffee maker, send ur self a email, go to bed before 2:00 AM for a change, stay up all night so you won't over sleep[, don't go to the bar Friday night, all night, sleep with the radio on all night followed by the divorce in the morning, tell John, K3UR to call you on the phone when he has absolutely - totally and definitely; without question; nothing to do, HiHi

I will be on either 28440, 14325, 7263, 3958 depending on propagation here in Pennington, New Jersey.
Rosedale Park in Hopewell Township is north of WestTrenton, New Jersey just north of the W2ZQ, Delaware Valley Radio Association club house site from which I do the TEN-TEC Nets every week.
Check your home area so you can demo Amatuer Radio with a TEN-TEC Radio to the Boy Scouts too and or C U on the air and better yet both.
The more TEN-TEC's the better, so crank up your HF and work the Boy Scouts all over the World.
This is a great chance to bring new young blood in to our hobbie because cause they are our FUTURE REPLACEMENTS to keep Amatuer Radio and TEN-TEC alive and well.
So at least hop on the air and work a Boy Scout on the planet, It could be one of best contacts you will
ever make and you might not know it at the time, but it might be the future President of our or some other Country or maybe the future Ham that works your kids or grand kids on the air some day long after we are all gone to the big dx in the sky, HiHi.
I want to thank KY4OZ, OZ for all the Boy Scout contacts he made this pass Winter with Rory, NJ3U along with other members of the DVRA, W2ZQ group and myself at the College of New Jersey, It was one degree below zero that day here in New Jersey, but the Boy Scout were out and about and on the air.
Also the Scouts were outside checking out the antennas with the tempature below zero too.

to w2zq-leadership, w2zq-membership, DSRC, mercer-ares

Our local Jamboree On The Air (JOTA) activity this year will be a Field Day like station set up at the Mercer Area District’s Camporee at Rosedale Park in Hopewell Township on Saturday, 18 October 2014. https://www.google.com/maps/@40.3283664,-74.7559253,17z?hl=en https://www.google.com/maps/@40.3283664,-74.7559253,17z?hl=en The easiest way to get there is to head north on Route 31, turn right onto Delaware Avenue (Rt 624) in Pennington, and eventually bear right onto Federal City Road to the park entrance. Lloyd Price, N2KPC, is taking the lead on setting up the station at the park at 8:30 for a 9 AM start. They will operate until 5 PM or possibly later if the interest persists. Gary, K2GW, will also be there with his HF Mobile set up in case it is needed for overflow. Other hams wishing to help should meet at the DVRA club shack (Southeast corner of I-95 Exit 2) at 7:30 AM to assist Steve Costanzo, KC2VDL, in loading the logistics (tents, tables, chairs, PR Kit, extension cords, coax, etc. ) needed at the site. You will then travel to the site arriving at 8:30 AM to help set things up. The plan is for two tents; one with hams explaining Amateur Radio and JOTA to the Scouts and the other with Lloyd’s station where they will talk to other Scouts on the radio. If you can help, please send a private e-mail to Gary

Wilson at k2gw@arrl.net mailto:k2gw@arrl.net indicating the times that you will help. You should plan on bringing a bag lunch with you. Thanks & 73 Gary Wilson, K2GW From: pr [mailto:pr-bounces@reflector.arrl.org] On Behalf Of Kutzko, Sean, KX9X

Subject: [pr:13378] Jamboree On The Air This Weekend Hi folks- This weekend is Scouting's Jamboree On The Air. It's the largest scouting event on the planet. Over 700,000 participants worldwide take part in this event. This is a golden opportunity for you to garner PR for Amateur Radio in your area. If your club is opening their doors to have Scouts participate in JOTA, be sure to get the local media there to cover the event. This is a sure-fire way to highlight the public service component of Amateur Radio in your community. ARRL's JOTA page is here:http://www.arrl.org/jamboree-on-the-air-jota ARRL news story is here:http://www.arrl.org/news/scouting-s-57th-jamboree-on-the-air-jota-takes-place-october-18-19 Boy Scouts JOTA page is here:http://www.scouting.org/jota.aspx Do not miss this chance. 73, Sean Kutzko, KX9XMedia and Public Relations Manager ARRL, the national association for Amateur Radio225 Main St.Newington, CT

From: Tony
Topic: 3369  Message: 3369

☐Hi all,

I was looking for a way to practice ?CW on my Orion2 without sending an RF carrier. I found a way to do it. Use the following steps.

1: Set mode in LCW☐ or UCW.
2: Press any of the Send1, 2 or 3 buttons and hold down until the menu for record/playback shows. Do NOT press any buttons.
3: you can now practice ?CW without transmitting RF. When done press EXIT.

Note: you can only do this with the internal keyer.
I used to practice with 1 Watt into a dummy load but this is much better.

It's still good practice to connect to a dummy load just in case you forget when you switch back to normal operations.

73 and have fun, Tony VE3DWI.

Sent from my BlackBerry 10 smartphone on the Bell network.

Good morning Tony et all.

A safer way to do this.

Select "MENU"
Scroll to "TRANSMITTER" main tuning knob
Select "OFF" with multi knob
Select "MENU" returns radio to normal ops, but the transmitter is OFF.

U will notice next to the PWR button "OFF" will be displayed.

I do this when company is around so that folks can listen to the radio, but no way can they xmit any power or mode.

OH well, I looked at the main power button. I have the same manual and U R right on page 11 it makes no mention of push and hold to turn the xmtr on or off.
Tnx agn to John, QMA for that info.

Hope to hear U at 1400 lcl.

Andy

Also, on the Jupiter..if you press and hold the Rit button, it will
return to 0000.
Same with the PBT button. Press and hold will return to 00000.

Same thing for the SAF filter. You can toggle it or Notch the same way.

Yes you will find with most ten tec radios from the Jupiter onward the press and hold feature is available for many of the radios functions.

John Hennery told me a good one that is a big time saver with my Orion II. In the manual is tells you that if you press the A>B button it will copy the frequency from VFO A to VFO B but what it does not say is if you “Press and Hold” the A>B button it will not only copy the frequency it will also copy over the Filter, Mode, RF Gain and any DSP that is used!

73/KC2QMA
John

?

And let us not forget about the rotary encoder knobs are also buttons as well.
Now for example if you adjust the passband tuning to a specific value and you want to get back to zero all you have to do is press and hold in the passband tuning encoder and the passband tuning will immediately reset to zero.

The press and hold features available on ten tec radios actually not only save time but expend the capabilities of the menus system by helping you get things you want done quicker without having to dig deep into the menu to achieve the same result.

Go ahead and play with this feature and you will discover new treasures.

73/KC2QMA
John

One think I like about my Orion II is the volume control. Just push in on it and it mutes the audio.

Hey....

These are some great Tips, be it listed in the manuals or simply hidden, unknown options or features.

I think it would be great if we could compile and upload this type of info, into the Files section of the Yahoo Groups page.

What say ?

Hi all,

We had a great net with 50 stations checked in. Thanks to Ted N8TJE, Andy W3LI and Paul WA0BAG for relaying stations in to me. Conditions were fairly good as I could hear stations in MI and othere locations were I, usually, do not hear them or with great difficulty. We broke a Wednesday afternoon record.

Please check the log for accuracy and let me, and John, know of any corrections. C U on tonights 20 mtr CW net on 14.063 MHz. at 20:00 EDT (00:00Z) with Ron WB1HGA as net control.

73, Tony VE3DWI.

Hi Ray,
Thanks. Yes sometimes it is a bit confusing with people giving their full call or double check ins at the same time. But I do understand that not everybody hears everybody else and that can lead to confusion but nothing we can't handle by asking for a repeat, maybe two or three times, hi...hi.
The Maritime Mobile station threw me a bit for a loop though as he did not know the procedure and was very eager for a report. He was in Chesapeake Bay and said that he was leaving for the Caribbean and needed desperately to know whether his radio was working. I guess he was not able to contact anybody. I should have told him to get his HAM License then he would be able to contact someone most of the time. Anyway I enjoyed the net today.
73, Tony VE3DWI.

Hi Andy,
For mobiles I try to put the home state in as it is needed for sending the certificates.
This is just my way of thinking and I knew that you were in NJ when I worked you.
John, K3UR, for a mobile what do you wish to be recorded, the home state or the state where the mobile is operating from?
Thanks es 73, Tony VE3DWI.

RELEASE 14-283

NASA’s Hubble Finds Extremely Distant Galaxy through Cosmic Magnifying Glass

http://www.nasa.gov/sites/default/files/14-283_0.jpg

The mammoth galaxy cluster Abell 2744 is so massive that its powerful gravity bends the light from galaxies far behind it, making these otherwise unseen background objects appear larger and brighter than they would normally.

Image Credit:
NASA, J. Lotz, (STScI)

Peering through a giant cosmic magnifying glass, NASA’s Hubble Space Telescope has spotted a tiny, faint galaxy -- one of the farthest galaxies ever seen. The diminutive object is estimated to be more than 13 billion light-years away.
This galaxy offers a peek back to the very early formative years of the universe and may just be the tip of the iceberg.
“This galaxy is an example of what is suspected to be an abundant, underlying population of extremely small, faint objects that existed about 500 million years after the big bang, the beginning of the universe,” explained study leader Adi Zitrin of the California Institute of Technology in Pasadena, California. “The discovery is telling us galaxies as faint as this one exist, and we should continue looking for them and even fainter objects, so that we can understand how galaxies and the universe have evolved over time.”
The galaxy was detected by the Frontier Fields program, an ambitious three-year effort that teams Hubble with NASA’s other great observatories -- the Spitzer Space Telescope and Chandra X-ray Observatory -- to probe the early universe by studying large galaxy clusters. These clusters are so massive their gravity deflects light passing through them, magnifying, brightening, and distorting background objects in a phenomenon called gravitational lensing. These powerful lenses allow astronomers to find many dim, distant structures that otherwise might be too faint to see.
The discovery was made using the lensing power of the mammoth galaxy cluster Abell 2744, nicknamed Pandora’s Cluster, which produced three magnified images of the same, faint galaxy. Each magnified image makes the galaxy appear 10 times larger and brighter than it would look without the zooming qualities of the cluster.
The galaxy measures merely 850 light-years across -- 500 times smaller than our Milky Way galaxy-- and is estimated to have a mass of only 40 million suns. The Milky Way, in comparison, has a stellar mass of a few hundred billion suns. And the galaxy forms about one star every three years, whereas the Milky Way galaxy forms roughly one star per year. However, given its small size and low mass, Zitrin said the tiny galaxy actually is rapidly evolving and efficiently forming stars.
The astronomers believe galaxies such as this one are probably small clumps of matter that started to form stars and shine, but do not yet have a defined structure. It is possible

Hubble is only detecting one bright clump magnified due to the lensing. This would explain why the object is smaller than typical field galaxies of that time.
Zitrin’s team spotted the galaxy’s gravitationally multiplied images using near-infrared and visible-light photos of the galaxy cluster taken by Hubble’s Wide Field Camera 3 and Advanced Camera for Surveys. But they needed to measure how far away it was from Earth. Usually, astronomers can determine an object’s distance based on how far its light has been stretched as the universe slowly expands. Astronomers can precisely measure this effect through spectroscopy, which characterizes an object’s light. But the gravitationally-lensed galaxy and other objects found at this early time period are too far away and too dim for spectroscopy, so astronomers use an object’s color to estimate its distance. The universe’s expansion reddens an object’s color in predictable ways, which scientists can measure.
Zitrin’s team performed the color-analysis technique and took advantage of the multiple images produced by the gravitational lens to independently confirm the group’s distance estimate. The astronomers measured the angular separation between the three magnified images of the galaxy in the Hubble photos. The greater the angular separation due to lensing, the farther away the object is from Earth.
To test this concept, the astronomers compared the three magnified images with the locations of several other closer, multiply-imaged background objects captured in Hubble images of Pandora’s cluster. The angular distance between the magnified images of the closer galaxies was smaller.
“These measurements imply that, given the large angular separation between the three images of our background galaxy, the object must lie very far away,” Zitrin explained. “It also matches the distance estimate we calculated, based on the color-analysis technique. So we are about 95 percent confident this object is at a remote distance, at redshift 10, a measure of the stretching of space since the big bang. The lensing takes away any doubt that this might be a heavily reddened, nearby object masquerading as a far more distant object.”
Astronomers have long debated whether such early galaxies could have provided enough radiation to warm the hydrogen that cooled soon after the big bang. This process, called reionization, is thought to have occurred 200 million to 1 billion years after the birth of the universe. Reionization made the universe transparent to light, allowing astronomers to look far back into time without running into a “fog” of cold hydrogen.
The team’s results appeared in the September online edition of The Astrophysical Journal Letters.
The Hubble Space Telescope is a project of international cooperation between NASA and the European Space Agency. NASA's Goddard Space Flight Center in Greenbelt, Maryland, manages the telescope. The Space Telescope Science Institute (STScI) in Baltimore conducts Hubble science operations. STScI is operated for NASA by the Association of Universities for Research in Astronomy, Inc., in Washington.

Sunset Solar Eclipse

Oct 17, 2014: Sunsets are always pretty. One sunset this month could be out of this world. On Thursday, Oct. 23rd, the setting sun across eastern parts of the USA will be red, beautiful and … crescent-shaped.
"It's a partial solar eclipse," explains longtime NASA eclipse expert Fred Espenak. In other words, the New Moon is going to 'take a bite' out of the sun.
https://www.youtube.com/watch?v=1Rcf_QNaXK0&feature=youtu.be A new ScienceCast video previews the partial solar eclipse of Oct. 23rd. Play it
https://www.youtube.com/watch?v=1Rcf_QNaXK0&feature=youtu.be

A total eclipse is when the Moon passes directly in front of the sun, completely hiding the solar disk and allowing the sun's ghostly corona to spring into view. A partial eclipse is when the Moon passes in front of the sun, off-center, with a fraction of the bright disk remaining uncovered.
The partial eclipse of Oct. 23rd will be visible from all of the United States except Hawaii and New England. Coverage ranges from 12% in Florida to nearly 70% in Alaska. Weather permitting, almost everyone in North America will be able to see the crescent.
http://science.nasa.gov/mailing-lists/subscribe/
The eclipse will be especially beautiful in eastern parts of the USA, where the Moon and sun line up at the end of the day, transforming the usual sunset into something weird and wonderful.
"Observers in the Central Time zone have the best view because the eclipse is in its maximum phase at sunset," says Espenak. "They will see a fiery crescent sinking below the horizon, dimmed to human visibility by low-hanging clouds and mist".
Warning: Don't stare. Even at maximum eclipse, a sliver of sun peeking out from behind the Moon can still cause pain and eye damage. Direct viewing should only be attempted with the aid of a safe solar filter.
http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig04.pdf Click to view a visibility map
http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig04.pdf of the Oct 23rd partial solar eclipse.

During the eclipse, don't forget to look at the ground. Beneath a leafy tree, you might be surprised to find hundreds of crescent-shaped sunbeams dappling the grass. Overlapping leaves create a myriad of natural little pinhole cameras, each one casting an image of the crescent-sun onto the ground beneath the canopy. When the eclipsed sun approaches the horizon, look for the same images cast on walls or fences behind the trees.
Here's another trick: Criss-cross your fingers waffle-style and let the sun shine through the matrix of holes. You can cast crescent suns on sidewalks, driveways, friends, cats and dogs—you name it. Unlike a total eclipse, which lasts no more than a few minutes while the sun and Moon are perfectly aligned, the partial eclipse will goes on for more than an hour, plenty of time for this kind of shadow play.
A partial eclipse may not be total, but it is totally fun.
See for yourself on Oct. 23rd. The action begins at approximately 6 pm on the east coast, and 2 pm on the west coast. Check NASA's Eclipse Home Page http://eclipse.gsfc.nasa.gov/ for viewing times near your hometown.

What's up in space On October 23rd there will be a partial eclipse of the Sun. Got clouds? No problem. The event will be broadcast live on the web http://www.ccssc.org/webcast.html by the Coca-Cola Science Center.
http://www.ccssc.org/webcast.html
ELUSIVE 5TH-ORDER RAINBOW SIGHTED: Most rainbows are caused by light reflected once, or sometimes twice, inside raindrops. Larger numbers of reflections are possible, but the rainbows they create are very rare. After years of searching, atmospheric optics experts have sighted a rainbow caused by five reflections, the elusive 5th-order rainbow. Read all about it http://www.atoptics.co.uk/fz1063.htm.
A BEHEMOTH SUNSPOT EMERGES: A large and active sunspot is rotating over the sun's southeastern limb on Oct. 17th. J. P. Brahic sends this picture of the behemoth from Uzès, France:
http://spaceweathergallery.com/indiv_upload.php?upload_id=103159
"I inserted a picture of Earth for scale," says Brahic. The sunspot's primary dark core could swallow our entire planet with room to spare.
This sunspot could cause a sharp increase in solar activity over the weekend. Earlier this week, while it was still hidden behind the southeastern limb, the active region unleashed several M-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=hn2rc7q7disgj45rf84bpop923
solar flares and hurled a massive CME http://spaceweather.com/images2014/15oct14/cme_anim.gif?PHPSESSID=hn2rc7q7disgj45rf84bpop923 into space. Considering the fact that the blast site was partially eclipsed by the edge of the sun, those flares were probably much stronger than their nominal classification. Now that the sunspot has revealed itself, X-flares
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=hn2rc7q7disgj45rf84bpop923
may be in the offing. Solar flare alerts: text http://spaceweathertext.com/, voice

GREEN COMET APPROACHES RED PLANET: On Sunday, Oct. 19th, Comet Siding Spring will pass only 140,000 km away from Mars. For comparison, that's about 1/3rd the distance between Earth and the Moon. For a while last year, astronomers thought
http://science.nasa.gov/science-news/science-at-nasa/2013/26mar_marscomet/ the comet might actually hit Mars, setting off a cataclysmic climate change experiment, but now we know it's going to be a near miss. Last night, only three days before closest approach, astrophotographer Damian Peach snapped this picture:
http://www.damianpeach.com/deepsky/c2013_a1_2014_10_16dp.jpg
"The comet is presently moving against the dense star clouds of the southern Milky Way," says Peach. "Soon, however, it will reach Mars."
An international fleet
http://science.nasa.gov/science-news/science-at-nasa/2014/09oct_cometprep/ of Mars orbiters and rovers will observe the encounter from close range. The most interesting data could come from MAVEN, a NASA spacecraft that has reached Mars just ahead of the comet. MAVEN is designed to study the martian atmosphere. That's good, because when the comet arrives, the atmosphere of the comet will likely brush against the atmosphere of Mars,

possibly sparking auroras on the Red Planet
http://science.nasa.gov/science-news/science-at-nasa/2014/12aug_marscomet/. MAVEN could record these alien lights.
"Just as exciting http://www.cometcampaign.org/karl/exciting-times," adds comet researcher Karl Battams of the Naval Research Lab, "is the prospect of the Mars Reconnaissance Orbiter's HiRISE camera being able to actually resolve (i.e. determine the shape of) the nucleus of the comet. ESA and NASA spacecraft have seen comet nuclei http://www.cometcampaign.org/files/images/comets_spacecraft.jpg before, but comet Siding Spring is a little different. It's an 'Oort Cloud comet' on its first ever foray into our solar system. This means it is largely pristine and will likely not have undergone any major changes since it formed. We've never seen one of these comets up close. Never. We don't know exactly what to expect."
Experienced amateur astronomers with mid-sized telescopes and sensitive digital cameras should have no trouble photographing Comet Siding Spring in the nights ahead. It can be found glowing like a 12th magnitude star in the constellation Ophiuchus right next to ... you guessed it ... the planet Mars. [light curve http://cometcampaign.org/current-status] [ephemeris http://scully.cfa.harvard.edu/cgi-bin/returnprepeph.cgi?d=c&o=CK13A010] [3D orbit http://ssd.jpl.nasa.gov/sbdb.cgi?sstr=c%2F2013%20A1;orb=1;cov=0;log=0;cad=0#orb]

All Sky Fireball Network Every night, a network of NASA all-sky cameras http://fireballs.ndc.nasa.gov/ scans the skies above the United States for meteoritic fireballs. Automated software maintained by NASA's Meteoroid Environment Office calculates their orbits, velocity, penetration depth in Earth's atmosphere and many other characteristics. Daily results are presented here on Spaceweather.com.
On Oct. 17, 2014, the network reported 20 fireballs.
(16 sporadics, 3 Orionids, 1 Southern Taurid)
http://spaceweather.com/images2014/17oct14/orbits.gif?PHPSESSID=hn2rc7q7disgj45rf84bpop923
In this diagram of the inner solar system, all of the fireball orbits intersect at a single point--Earth. The orbits are color-coded
http://spaceweather.com/images/colors.gif?PHPSESSID=hn2rc7q7disgj45rf84bpop923 by velocity, from slow (red) to fast (blue). [Larger image http://spaceweather.com/images2014/17oct14/orbits.gif?PHPSESSID=hn2rc7q7disgj45rf84bpop923] [movies http://fireballs.ndc.nasa.gov/20141017.html]

Propagation Forecast Bulletin 42 ARLP042
From Tad Cook, K7RA
Seattle, WA October 17, 2014
To all radio amateurs

SB PROP ARL ARLP042
ARLP042 Propagation de K7RA

Solar activity declined this week, with average daily sunspot numbers going from 98 last week to 55.1 in the week ending Wednesday, October 15. Average daily solar flux went from 131.9 to 117.4.

Average planetary A index rose from 6.4 to 10.4. The most unsettled geomagnetic day was Tuesday, October 14, when the planetary A index was 18, and the planetary K index reached 5 for 9 hours overnight. In Alaska, the college A index reached 21, but this was because the same 9 hour period of activity all occurred by the end of the day (in UTC), while the planetary K index reached 5 for six hours at the end of the day on Tuesday and 3 hours at the beginning of the day on Wednesday.

The latest prediction for solar flux is 150 and 160 on October 17 and 18, 170 on October 19 to 23, 140 on October 24 and 25, 135 and 130 on October 26 and 27, 125 on October 28 and 29, 120 on October 30 and 31, 125 on November 1 and 2, 120 on November 3 and 4, 115 on November 5 and 6, and 110 on November 7 to 9. The November 7 to 9 value is a low for the near term, which then rises to a high of 140 on November 18 to 21 before declining again.

Predicted planetary A index is 8 on October 17 to 20, 15 on October 21 to 24, 10 on October 25 to 28, 8 on October 29, 5 on October 30 to November 3, then 8 and 10 on November 4 and 5, 8 again on November 6 and 7, 5 on November 8 and 9, and 8 on November 10 to 12. What follows are many days with unsettled geomagnetic conditions,

with the greatest being an Ap (planetary A index) of 20 on November 17.

OK1HH offers his insight on geomagnetic activity over the next 3 to 4 weeks, and he thinks that it will be quiet on October 17 and 18, mostly quiet on October 19, quiet to active October 20 and 21, mostly quiet October 22 and 23, quiet to unsettled October 24, quiet October 25, active to disturbed October 26, quiet to active October 27, mostly quiet October 28, quiet to unsettled October 29, quiet on October 30 to November 1, mostly quiet November 2, quiet to unsettled November 3, quiet to active November 4, quiet to unsettled November 5, mostly quiet November 6 and 7, quiet again on November 8 and 9, quiet to unsettled November 10, quiet to active November 11, and finally active to disturbed conditions on November 12.

OK1HH expects increased solar wind on October 19 and 20.

NW7US has some great stuff on TEC (Total Electron Content) on one of his Facebook pages at https://www.facebook.com/spacewx.hfradio
https://www.facebook.com/spacewx.hfradio.

Lee Gordy, W4KUT of Cartersville, Georgia wrote: "My friend KC4YCM, and I recently observed WWV on 25 MHz (04OCT2014, around 12 noon EDT). May not be a big deal to many, but I hadn't heard WWV on 25 MHz in a very long time. It was S7-9 on a 'scotch S-meter' (Icom IC 781).

I've been watching the ongoing cycle, and looking for peaks... ol' sol is truly unpredictable. BTW, my friend and I sent sig reports to WWV.

A quote from TI3/W7RI in Costa Rica in your last report:

'Conditions on 10 meters have been much better, and the band has been producing good results during the morning hours, particularly to Europe, and W6 and W7 later in the day. 20 meters here is back to being open around the clock, and even 10 will open as soon as the sun hits the ionosphere in the morning.'

And that's been my observation.

I hope WWV 25 MHz remains on... I use it as a real-time propagation tool (as well as a freq/time standard).

Even though I'm a 'layman' when it comes to propagation, I'm fascinated by all the up-and-down stuff that's been going on since your reports began."

Thanks. Yes, the 25 MHz WWV signal has been off the air since 1977, but recently back on, provisionally. This article mentioned it:

http://www.arrl.org/news/wwv-s-25-mhz-signal-back-on-the-air
http://www.arrl.org/news/wwv-s-25-mhz-signal-back-on-the-air

Scott Bidstrup, TI3/W7RI wrote:

"Don't know if you have seen this, but some interesting new discoveries offer some new insight on how the sunspot cycle works. No real prediction, though, on how the next one will be:

http://qrznow.com/researchers-discover-new-clues-determining-solar-cycle/
http://qrznow.com/researchers-discover-new-clues-determining-solar-cycle/

Propagation here in the single-digit latitudes has been lackluster lately, with the sunspot number, solar flux and 304a indexes both pretty much in the tank. Even though the 304a index has shown some improvement in the last two days, the far-side image from the remaining functional STEREO spacecraft indicates that there isn't much activity that is about to rotate into view, so I'm not sanguine that it will improve by much or last very long.

The unimpressive solar activity has had its effect on propagation - ten meters has still been open daily, but never wide open. We'll see maybe half a dozen signals at any given moment, mostly eastern and central Europe, little activity into the States. One thing I have noticed is that when I am seeing a lot of Stateside signals on 10 meters in the morning, we're likely to have a TEP opening in the afternoon into South America - 6m aficionados might find 10m worth watching in the morning for South America TEP later in the day.

The 10m through 20m bands have been rather poor, with 20m itself closing up shop mid-day and not reopening until about two in the afternoon, and pretty much gone a couple of hours after sunset. The noise floor during the 20m mid-day fadeout has been rising occasionally a bit too - something we often see here at solar minimums. Not a good sign.

Even six meters has been affected by all this - our recent spate of TEP openings into South America has continued, but with fewer and much reduced signal levels. The one surprising aspect is that they've been beginning much earlier in the day - often before noon. And they have been beginning with a bang - all of a sudden, like someone just flipped a switch, really strong signal levels that last a minute or two and then settle down to scattered, weak signals in and out for the rest of the afternoon. One morning, I was startled when CO8DM broke my squelch, very loud, and by the time I got to the radio, he'd faded down to almost nothing, and was in and out very weakly for an hour - never did manage to work him.

Just a few weak signals from Argentina and Brazil the rest of the day, and that's been the pattern for most of the last two weeks. The South Pacific and Atlantic has been in occasionally; I worked FK8CP and TI5/N5BEK heard a ZD7 yesterday break his squelch during a football game, came running into the shack and snagged it for a new one - just before it was gone. But little else - just the scattered, relatively weak PYs and LUs otherwise - and beacons. Lots and lots of beacons.

Regards and 73 from rainy Costa Rica, Scott Bidstrup TI3/W7RI"

Hi John,
I received my 100 check in cert. but w/o coffee, hat or mug. Not sure if I was supposed to get them or not but now you know what I know.
Best regards,
Ralph

# 3427. JOTA Starts Today 10-18-2014 Reminder 4 U

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-18 03:41:37 UTC
From: n2kpc@...
Topic: 3427  Message: 3427

I hope 2 hear U on the air because this is a inportant event for kids around the world. Here is UR chance to make a kid a HAM and show them what WE can do with a Radio from UR home or mobile Amatuer Radio Station by getting on the air and working a Boy Scout, over 700,000 worldwide.

Please Read and mark it on ur calander, set ur alarm clock, tell ur loved one to remind u, tie a sting around ur finger, put a note on the bathroom mirror, put a note on the coffee maker, send ur self a email, go to bed before 2:00 AM for a change, stay up all night so you won't over sleep[, don't go to the bar Friday night, all night, sleep with the radio on all night followed by the divorce in the morning, tell John, K3UR to call you on the phone when he has absolutely - totally and definitely; without question; nothing to do, HiHi

I will be on either 28440, 14325, 7263, 3958 depending on propagation here in Pennington, New Jersey.
Rosedale Park in Hopewell Township is north of WestTrenton, New Jersey just north of the W2ZQ, Delaware Valley Radio Association club house site from which I do the TEN-TEC Nets every week.
Check your home area so you can demo Amatuer Radio with a TEN-TEC Radio to the Boy Scouts too and or C U on the air and better yet both.
The more TEN-TEC's the better, so crank up your HF and work the Boy Scouts all over the World.
This is a great chance to bring new young blood in to our hobbie because cause they are our FUTURE REPLACEMENTS to keep Amatuer Radio and TEN-TEC alive and well.
So at least hop on the air and work a Boy Scout on the planet, It could be one of best contacts you will
ever make and you might not know it at the time, but it might be the future President of our or some other Country or maybe the future Ham that works your kids or grand kids on the air some day long after we are all gone to the big dx in the sky, HiHi.
I want to thank KY4OZ, OZ for all the Boy Scout contacts he made this pass Winter with Rory, NJ3U along with other members of the DVRA, W2ZQ group and myself at the College of New Jersey, It was one degree below zero that day here in New Jersey, but the Boy Scout were out and about and on the air.
Also the Scouts were outside checking out the antennas with the tempature below zero too.

to w2zq-leadership, w2zq-membership, DSRC, mercer-ares

Our local Jamboree On The Air (JOTA) activity this year will be a Field Day like station set up at the Mercer Area District’s Camporee at Rosedale Park in Hopewell Township on Saturday, 18 October 2014. https://www.google.com/maps/@40.3283664,-74.7559253,17z?hl=en https://www.google.com/maps/@40.3283664,-74.7559253,17z?hl=en The easiest way to get there is to head north on Route 31, turn right onto Delaware Avenue (Rt 624) in Pennington, and eventually bear right onto Federal City Road to the park entrance. Lloyd Price, N2KPC, is taking the lead on setting up the station at the park at 8:30 for a 9 AM start. They will operate until 5 PM or possibly later if the interest persists. Gary, K2GW, will also be there with his HF Mobile set up in case it is needed for overflow. Other hams wishing to help should meet at the DVRA club shack (Southeast corner of I-95 Exit 2) at 7:30 AM to

assist Steve Costanzo, KC2VDL, in loading the logistics (tents, tables, chairs, PR Kit, extension cords, coax, etc. ) needed at the site. You will then travel to the site arriving at 8:30 AM to help set things up. The plan is for two tents; one with hams explaining Amateur Radio and JOTA to the Scouts and the other with Lloyd’s station where they will talk to other Scouts on the radio. If you can help, please send a private e-mail to Gary Wilson at k2gw@... mailto:k2gw@... indicating the times that you will help. You should plan on bringing a bag lunch with you. Thanks & 73 Gary Wilson, K2GW From: pr [mailto:pr-bounces@...] On Behalf Of Kutzko, Sean, KX9X

Hey Tony....

You should be able to open the Files with your Browser.

This is my first time to upload any files. I don't know (yet) if I went about it the correct way or not. I'll look into things when I get the time.

I do know this....

When you click on the Files, you have to click it twice in order for them to come up. Next that appears is a window asking what program you want to open it with. Just select your browser on the pull window.

The file itself is only a Text file.

Let me know if you figure it out.

But right now for the most part, I don't know why that you have to click twice on the Folder itself to get it to appear. Like I said I work on it....

# 3430. Oct. 21-2014 Orionid Meteor Shower

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-18 21:13:23 UTC
From: n2kpc@...
Topic: 3430  Message: 3430

2014 Orionid Meteor Shower

http://pinterest.com/pin/create/button/

Oct. 17, 2014: Waking up before sunrise is a good way to get a head start on the day. On Oct. 21st, waking up before sunrise could stop you in your tracks.

Blame Halley’s Comet. Every year in mid-to-late October, Earth passes through a stream of dusty debris from Comet Halley, and the pre-dawn sky can light up with a pretty display of shooting stars.

http://science.nasa.gov/media/medialibrary/2014/10/17/skymap.gif Orionid meteors fly out of a radiant near the shoulder of Orion, the Hunter. In this sky map, the radiant is denoted by a red dot. Although the meteors emerge from a single point, they can appear anywhere in the sky. Image credit: Dr. Tony Phillips [Larger image]

"We expect to see about 20 meteors per hour when the shower peaks on Tuesday morning, Oct 21st," says Bill Cooke, the head of NASA's Meteoroid Environment Office. "With no Moon to spoil the show, observing conditions should be ideal."

http://science.nasa.gov/mailing-lists/subscribe/

Because these meteors streak out of the constellation Orion, astronomers call them "Orionids."

"The Orionid meteor shower is not the strongest, but it is one of the most beautiful showers of the year," notes Cooke.

The reason is its setting: The shower is framed by some of the brightest stars in the heavens. Constellations such as Taurus, Gemini and Orion provide a glittering backdrop for the display. The brightest star of all, Sirius, is located just below Orion's left foot, a good place to point your camera while you're waiting for meteors.

http://www.spaceweather.com/meteors/orionids/images2009/Jefferson-Teng1.jpg An Orionid meteor streaks over the city lights of Shanghai in 2009. Credit: Jefferson Teng

To see the show, Cooke suggests going outside one to two hours before sunrise when the sky is dark and the constellation Orion is high overhead. Lie down on a blanket with a broad view of the heavens. Although Orionids emerge from a small area near the shoulder of Orion, they will spray across the entire sky.

"Be prepared for speed," he adds. "Meteoroids from Halley’s Comet strike Earth's atmosphere traveling 148,000 mph. Only the November Leonids are faster."

Speed is important because fast meteors have a tendency to explode. Occasionally, Orionid fireballs will leave incandescent streams of debris in their wake that linger for minutes. Such filaments of "meteor smoke" twisted by upper atmospheric winds into convoluted shapes can be even prettier than the meteors themselves.

"It really is a wonderful morning to be awake," says Cooke. "Just don't plan on going anywhere in a hurry."

# 3431. JOTA Today with 300 Boy Scouts Big Hit

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-18 21:55:53 UTC
From: n2kpc@...
Topic: 3431  Message: 3431

We had 300 Boy Scout today and they all works a TEN-TEC Eagle and all spoke to other Boy Scouts and DX stations and thru out the USA and CN too.
Thank You for all the nice contacts.
The W2ZQ Club was there to help setup, demo and tear down.
They brought tables, chairs, and canopies, etc to Rosedale Park in Pennington, New Jersey.
My Thanks to Mike AC2MW, Ron KC2PQC, Gary K2GW, Steve KC2VDL, Don AA2F for hands on help.
Everybody had fun including the Pumpkin Chuckin Event which the Boy Scouts built the own Homemade
Catapults.
Now there is a antenna put-ter-upper if I ever saw one.
We had the Scouts come up with some ways to power the radios and they came up with, water power, solar power,hand cranked, gas, bike driven, steam power, coal power wood etc and so you could see them thinking.
They work with a inverted-V 10-40 meter Spi-ro D-44 dipole and a Scorpion Screwdriver mobile antenna mounted on my truck.
It was a great event and the positive questions and positive on the air qso's went very well indeed.
The Ten-Tec Eagle was the way to hear thru the pile ups and the qso contest that were taking place near by on the band, Thank You Ten-Tec once again for a Great Radio that really did a super job on RX and TX.
It was very nice to hear so many of the TEN-TEC Family on the air today.
Bottom line our future Hams had a full day of fun.
They all camped overnight too.

Hi Roger,
I did some more checking and they are indeed text files. However, because there is no "file type extension" the computer does not know what to do with it. If you add .txt (dot txt) to the end of the file name it will open properly.

# 3435. Behemoth sunspot AR2192 has unleashed an X1-class solar flare sun on Oct. 19th (0500 UT):

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-19 15:48:51 UTC
From: n2kpc@...
Topic: 3435 Message: 3435

X1-CLASS SOLAR FLARE: This comes as no surprise. Behemoth sunspot AR2192 has unleashed an X1-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=c51iji5ko2oeba6gmja39rsmd3
solar flare. NASA's Solar Dynamics Observatory recorded the blast in this extreme UV image of the sun on Oct. 19th (0500 UT):
http://spaceweather.com/images2014/19oct14/x1.jpg?PHPSESSID=c51iji5ko2oeba6gmja39rsmd3
A pulse of ultraviolet and X-radiation from the flare caused a brief but strong HF radio blackout on the dayside of Earth, mainly over Asia and Australia.
Update (8:30 AM PDT): Remarkably, this explosion did not yield a significant CME.
Just-arriving coronagraph
http://spaceweather.com/glossary/coronagraph.html?PHPSESSID=c51iji5ko2oeba6gmja39rsmd3
images from SOHO show no cloud emerging from the blast site.
Big sunspots tend to produce big flares, and clearly AR2192 is no exception. More X-flares are likely as AR2192 turns toward Earth in the days ahead. Also, if you have a solar telescope http://luntsolarsystems.com/, point it at the sun. This active region is a real beauty http://spaceweathergallery.com/indiv_upload.php?upload_id=103190. Solar flare alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
Realtime Space Weather Photo Gallery http://spaceweathergallery.com/
EMERALD DYNAMITE: On Oct. 18th, Earth passed through multiple folds in the heliospheric current sheet--a phenomenon known as "solar sector boundary crossings." This sparked a veritable explosion of bright auroras around the Arctic Circle. Ole Salomonsen of Tromso, Norway, captured the outburst in this photo, which he calls Emerald Dynamite:
http://spaceweathergallery.com/indiv_upload.php?upload_id=103213
"This is one of many spectacular auroral displays I captured tonight," says Salomonsen. "There were red auroras, green auroras, coronas, fast moving purple bands... It was the most amazing display I have witnessed in a long time."
More auroras are in the offing. NOAA forecasters expect additional solar sector boundary crossings on Oct. 19th with a 30% chance of polar geomagnetic storms before the weekend

Extreme Ultraviolet Image of a Significant Solar Flare http://links.govdelivery.com/track?type=click&enid=ZWFzPTEmbWFpbGluZ2lkPTIwMTQxMDIwLjM3MjE5NzIxJm1lc3NhZ2VpZD1NREItUFJELUJVTC0yMDE0MTAyMC4zNzIxOTcyMSZkYXRhYmFzZWlkPTEwMDEmc2VyaWFsPTE2OTc0OTE5JmVtYWlsaWQ9bjJrcGNAYXJybC5uZXQmdXNlcmlkPW4ya3BjQGFycmwubmV0JmZsPSZleHRyYT1NdWx0aXZhcmlhdGVJZD0mJiY=&&&100&&&http://www.nasa.gov/content/extreme-ultraviolet-image-of-a-significant-solar-flare
10/20/2014 12:00 PM EDT

The sun emitted a significant solar flare on Oct. 19, 2014, peaking at 1:01 a.m. EDT. NASA's Solar Dynamics Observatory, which is always observing the sun, captured this image of the event in extreme ultraviolet wavelength of 131 Angstroms – a wavelength that can see the intense heat of a flare and that is typically colorized in teal. This flare is classified as an X1.1-class flare. X-class denotes the most intense flares, while the number provides more information about its strength. An X2 flare is twice as intense as an X1, and an X3 is three times as intense. Solar flares are powerful bursts of radiation. Harmful radiation from a flare cannot pass through Earth's atmosphere to physically affect humans on the ground, however -- when intense enough -- they can disturb the atmosphere in the layer where GPS and communications signals travel. > More: NASA's SDO Observes an X-class Solar Flare Image Credit: NASA/Solar Dynamics Observatory

NASA/NOAA GOES Project

Gonzalo: First Hand Account in Bermuda, Next Stop: the United Kingdom
Hurricane Gonzalo departed from Bermuda leaving power outages, downed trees, and damaged homes and buildings. An on-the ground account of the storm indicated the eye passed over the island. By Oct. 20, post-tropical storm Gonzalo was approaching the United Kindgom, sparking severe weather warnings.
By Sunday, Oct. 19 Gonzalo was affecting eastern Canada. Forecasters expect Gonzalo to hold together over while traveling east across the North Atlantic where it will affect Scotland as an extra-tropical storm on Tuesday, Oct. 21.
Camille Haley was former NASA intern and is now a resident of Bermuda. She provided an account of her experience as Hurricane Gonzalo struck the island on Oct. 17.
"Light rain and wind slowly strengthened during the mid-afternoon, as Gonzalo approached Bermuda," she said. "At around 4:00 p.m. local time the wind and rain intensified by the minute. On a typical day, we can see the ocean from the veranda but there was no visibility within 100 feet at this point. I saw an electric wire fall in the neighbors' backyard; it continued to spark for hours. Trees were bending, branches were snapping and leaves were blowing everywhere. We were surrounded in darkness as the electricity in the area had gone out. Candles, flashlights and occasional strikes of lightning were our only light source. Suddenly there was a strange silence. The wind and rain had come to a complete stop. Curious, I opened the front door to feel a smothering heat. The sky was clear and all that could be heard was the whistling sound of what seemed like a million tree frogs. The eye of the storm had arrived. If I had not known that the eye of Hurricane Gonzalo was going to approach us, I could have assumed that the storm had passed. Thankfully during this time, we were able to get a phone call through to my Aunt who lives in Boston. She was able gave us an update on what was predicted to come next. Without warning the wind roared fiercely followed by harsh rain. The second half of Gonzalo arrived with ferocity. In my opinion this was the worst part. I barely slept fearing that the front door and windows were going to implode. The howling sound of the wind was haunting.
The next morning the sky was clear and the ocean was calm. Although my neighborhood didn't suffer much damage, other than a few electric wires falling, other areas of the island had fallen light poles, wires and trees, crushed fences and walls. Some homes had roofs that fell in or came completely off. I'm amazed at how many trees were uprooted or fallen over across the island."
By October 18, Gonzalo had moved north of Bermuda and was headed toward eastern Canada. Between 7 a.m. and 8 a.m. on Oct. 19, a weather station on Cape Race, Newfoundland reported a sustained wind of 41 mph (67 kph) and a gust of 55 mph (89 kph). St. Johns Newfoundland recently reported a wind gust of 45 mph (72 kph).
At 8 a.m. EDT on Sunday, Oct. 19, Gonzalo was still a hurricane over the cold waters of the north Atlantic. A tropical storm watch is effect for Arnolds Cove to Chapels Cove, Newfoundland, Canada.
.On Sunday, Oct. 19 at 8 a.m. EDT, Gonzalo's center was near latitude 47.6 north and longitude 50.1 west. NOAA's GOES-East satellite captured a visible image of the storm on Sunday, Oct. 18 at 1145 UTC (7:45 a.m. EDT) that showed it in the North Atlantic, blanketing eastern Canada and stretching east over open waters. At that time, Gonzalo was moving toward the northeast near 52 mph (83 mph). Gonzalo moved quickly away from Newfoundland into the North Atlantic. Maximum sustained winds were near 85 mph (140 kph) and gradual weakening was forecast.
Just three hours later the MODIS instrument aboard NASA's Terra satellite captured a visible image that showed Hurricane Gonzalo had moved more than 150 miles further east from Newfoundland, Canada than when the GOES image was taken.
On Oct. 19 effects from Gonzalo were still being felt in many places because of dangerous ocean conditions. Large swells, now waning, were affecting the Virgin Islands, the northern

coasts of Puerto Rico and the Dominican Republic, portions of the Bahamas, portions of the United States east coast, Bermuda and Atlantic Canada.
By Sunday night Gonzalo and become an extra-tropical cyclone with a cold core center (instead of a warm center like a tropical cyclone) as the National Hurricane Center expected.
Gonzalo is expected to affect Scotland on Tuesday, October 21 as an extra-tropical storm, packing heavy rains and gusty winds.
On Monday, Oct. 20, the U.K. Meteorological Service issued a National Severe Weather Warning for the U.K.: "The remains of Hurricane Gonzalo are running across the Atlantic, reaching the UK on Monday night, bringing a period of strong winds to the U.K. The strongest winds are expected on Tuesday as the low pressure clears eastwards; some uncertainty remains in peak windspeeds but there remains the potential for disruption to travel, especially as the strongest winds coincide with the morning rush hour in places. Fallen leaves impeding drainage increases the risk of surface water affecting roads, while some damage to trees is possible, given that many are still in full leaf." For updated warnings from the U.K. Met Service, visit: http://www.metoffice.gov.uk
http://www.metoffice.gov.uk/.

>Extreme Ultraviolet Image of a Significant Solar Flare
>10/20/2014 12:00 PM EDT
>The sun emitted a significant solar flare on Oct. 19, 2014, peaking at 1:01 a.m. EDT. NASA's Solar Dynamics Observatory, which is always observing the sun, captured this image of the event in extreme ultraviolet wavelength of 131 Angstroms – a wavelength that can see the intense heat of a flare and that is typically colorized in teal. This flare is classified as an X1.1-class flare. X-class denotes the most intense flares, while the number provides more information about its strength. An X2 flare is twice as intense as an X1, and an X3 is three times as intense. Solar flares are powerful bursts of radiation. Harmful radiation from a flare cannot pass through Earth's atmosphere to physically affect humans on the ground, however -- when intense enough -- they can disturb the atmosphere in the layer where GPS and communications signals travel. > More: NASA's SDO Observes an X-class Solar Flare Image Credit: NASA/Solar Dynamics Observatory

# 3443. TEN-TEC 10 Meter SSB Net had 25 Checkins Sunday 10-19-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-21 02:29:56 UTC
From: n2kpc@...
Topic: 3443  Message: 3443

AND MORE I had 25 Checkins, NJ-13, AZ-2, PA-2 TX-2, LA-1, MT-1, MA-1, CA-1, CN-2.

CANADA, Wonder who checked in from CN, let see who that might be.
Oh yes you should know that one.
Marianne and Tony of course, VE3MXT and VE3DWI part of the TEN-TEC Family up North.
Thank You both for all you do for the TEN-TEC Nets.
Thank You to all that tried and gave it ur best shot once again.
It is Great to see the Technician Class Hams checking in to the TEN-TEC 10 Meter SSB Net every week because they are our future Hams on the air now and they are our future.
The TEN-TEC 10 Meter SSB Net gives them a chance to see what Amatuer Radio is all about and they say that they are having fun too.
The Net gives them another reason to upgrade so they can check into the 40 and 20 meter TEN-TEC Nets as well.
They also ask about the TEN-TEC CW Nets as well, LOOK OUT Ron,
you are going to have some new CW Hams coming soon tapping at UR door!!!
KC2QMA, John's live streaming of the TEN-TEC Nets is bringing old and new Hams to the TEN-TEC Nets every week along with shortwave non-Hams tuning in and thinking about getting their Amatuer Radio licenses because they are enjoying the TEN-TEC Family "That's You reading this" on the TEN-TEC Nets.
They hear everybody helping one another relaying, answering questions, talking to me about antennas and telling me about what kind of a antenna they are using, how high they are, how they setup the grounding systems etc.
This helps new and old Hams alike.
Please post some more pictures of your antennas, grounding systems, mobile setups, shacks radio mounts no matter how small or big because it helps everbody come up with new ideas for inproving their systems.
This is a great help for the new Hams starting out in Amatuer Radio and help the SWL'ers get better systems going so they will go after their Amatuer Radio licenses and just plain have fun and learn as they do so.
Feel free to have anybody contact me for help, it is what I do all the time at the W2ZQ, DVRA Shack in West Trenton, NJ on the weekends and I am not the only one there that does so.
If you need help or just want to take a mini vacation in NEW Jersey don't wait just do it and you can have a nice time just having fun and maybe play with the big antennas too, learn how to do SSTV, PSK, Packet, or use a big yagi beam to work long path. How to build ur own dipole, yagi, vertical, delta loop, open end box, rf detector, eme or what ever you wish.
We have the space you might not have to build it and try it out.
Hams come up often to do these things and ask me on the TEN-TEC Nets if you are looking for some help in your area so you can make a new friend that wants to do the same thing but maybe like you doesn't know who else would.
We do it, so can you. Maybe we can help a little bit by just bring you together.
There is no eye in team work, HiHi.
No boss, no fun by ur self, no learning new ideas by ur self either.

Books don't invent new antenna, you do.
But they do a nice job of "grounding" rules, pun intended.
Thank You all in advance for making this TEN-TEC Group the best place to be
on K3UR, John's TEN TEC RADIO NET Group.
Hail to the Net Manager for the forsight to have a open group.
Just a note, when I finish checking in everybody we can do this on 10-40-20 meter Nets that it does not hold up the checkin who has to go fishing, weeding, beer drinking, have a cigar, take the better half out shopping, sleeping because they wore themselfs out checking into all the TEN-TEC Nets QRP'ing, Praying for a new TEN-TEC Radio, going to the Goodwill store to look for one, Good Luck with That One and let me know if you find one there!!! or just need that DX FIX to make it thru the weekend before they go back to work Monday, like me,HiHi.

Hi all,

In spite of the solar flare, that happened earlier today, we had a good net with 42 stations checked in. Thank you Ted N8TJE (he had to remind me of XT (Marianne again)) for helping out calling and relaying and Rich N0ENO who relayed a station we could not copy well enough. Andy K9ARM/m and John KC2QMA/m came in with S-7+ signals along with various other mobiles and a portable station. Thanks for streaming the audio John.

Please check the list for any mistakes. Great to hear you all.

73, Tony VE3DWI.

# 3450. Partial Solar Eclipse On Thursday, Oct. 23rd,

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-22 21:46:10 UTC
From: n2kpc@...
Topic: 3450  Message: 3450

Oct 17, 2014: Sunsets are always pretty. One sunset this month could be out of this world. On Thursday, Oct. 23rd, the setting sun across eastern parts of the USA will be red, beautiful and … crescent-shaped.
"It's a partial solar eclipse," explains longtime NASA eclipse expert Fred Espenak. In other words, the New Moon is going to 'take a bite' out of the sun.
https://www.youtube.com/watch?v=1Rcf_QNaXK0&feature=youtu.be A new ScienceCast video previews the partial solar eclipse of Oct. 23rd. Play it
https://www.youtube.com/watch?v=1Rcf_QNaXK0&feature=youtu.be

A total eclipse is when the Moon passes directly in front of the sun, completely hiding the solar disk and allowing the sun's ghostly corona to spring into view. A partial eclipse is when the Moon passes in front of the sun, off-center, with a fraction of the bright disk remaining uncovered.
The partial eclipse of Oct. 23rd will be visible from all of the United States except Hawaii and New England. Coverage ranges from 12% in Florida to nearly 70% in Alaska. Weather permitting, almost everyone in North America will be able to see the crescent.
http://science.nasa.gov/mailing-lists/subscribe/
The eclipse will be especially beautiful in eastern parts of the USA, where the Moon and sun line up at the end of the day, transforming the usual sunset into something weird and wonderful.
"Observers in the Central Time zone have the best view because the eclipse is in its maximum phase at sunset," says Espenak. "They will see a fiery crescent sinking below the horizon, dimmed to human visibility by low-hanging clouds and mist".
Warning: Don't stare. Even at maximum eclipse, a sliver of sun peeking out from behind the Moon can still cause pain and eye damage. Direct viewing should only be attempted with the aid of a safe solar filter.
http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig04.pdf Click to view a visibility map
http://eclipse.gsfc.nasa.gov/OH/OHfigures/OH2014-Fig04.pdf of the Oct 23rd partial solar eclipse.

During the eclipse, don't forget to look at the ground. Beneath a leafy tree, you might be surprised to find hundreds of crescent-shaped sunbeams dappling the grass. Overlapping leaves create a myriad of natural little pinhole cameras, each one casting an image of the crescent-sun onto the ground beneath the canopy. When the eclipsed sun approaches the horizon, look for the same images cast on walls or fences behind the trees.
Here's another trick: Criss-cross your fingers waffle-style and let the sun shine through the matrix of holes. You can cast crescent suns on sidewalks, driveways, friends, cats and dogs—you name it. Unlike a total eclipse, which lasts no more than a few minutes while the sun and Moon are perfectly aligned, the partial eclipse will goes on for more than an hour, plenty of time for this kind of shadow play.
A partial eclipse may not be total, but it is totally fun.
See for yourself on Oct. 23rd. The action begins at approximately 6 pm on the east coast, and 2 pm on the west coast. Check NASA's Eclipse Home Page http://eclipse.gsfc.nasa.gov/ for viewing times near your hometown.

N2HX-SK Wed. 22, 2014.
Bob was the President of the DVRA-W2ZQ again this year and was very supportive of the TEN-TEC Nets and me using the W2ZQ Shack for the TEN-TEC Nets and working with Hams new and old and said so often.
He will be missed.
He was hoping to get on the TEN-TEC Nets every Sunday, but that did not happen due to illness.
He told me that he found them very interesting and enjoyed the group.
He voted to get the Omni 7 as the next W2ZQ DVRA Club Radio as did everybody else.
So a fund was setup to do so little by little. Small Club you know.
Prayers for his Family and his Mother who passes away two days before Bob.died as he Prayed for.
That was a Blessing for him, Amen.
Blessing come in many forms.

Robert "Bob" Schroeder, N2HX, of Ewing, New Jersey, has been named the winner of the ARRL's 2009 Bill Orr, W6SAI, Technical Writing Award for his article "Electromagnetic Pulse and Its Implications for EmComm http://www.arrl.org/news/files/Schroeder.pdf" that appeared in November 2009 issue of QST. The editorial staff commented on Schroeder's article, saying that "the topic of nuclear EMP is somewhat esoteric by itself, let alone discussing its impact on Amateur Radio, yet the author did an outstanding job of making the subject matter understandable even to the relatively non-technical ham. His writing is clear and to the point, offering practical advice not only for EMP mitigation as it applies to the unlikely event of a nuclear burst, but also extending the same principles to mitigation for lightning damage."

The Bill Orr, W6SAI, Technical Writing Award is awarded yearly to the QST author who writes an outstanding QST article or series articles on new or existing technologies (or methods or means of amateur communication). The article should be written in an easily understood style, worthy of the Bill Orr "stamp of approval." It should encourage interest and expand the knowledge and understanding of amateurs who may not have a strong technical background. The selection panel will be the ARRL QST editorial staff, who will recommend the winner from a review of the year's QST articles to the ARRL Foundation Board for final approval at its Annual Meeting. The award will be an engraved plaque plus a check for $250 to be presented at an ARRL convention, if possible.
Schroeder is the Communications and Warning Officer for the New Jersey Office of Emergency Management. He has worked in emergency management for the State of New Jersey since 1983. Prior to that, he volunteered as an Amateur Radio operator doing emergency communications in 1969 for the New Jersey Office of Civil Defense and Disaster Control. Today, Schroeder serves as project manager for the Emergency Alert System (EAS), the New Jersey Public Warning Plan, and is the state director for the Radio Amateur Civil Emergency Service (RACES).
As he approaches retirement, Schroeder formed a new science and technology consulting company. He is active with the Delaware Valley Radio Association and currently serves as secretary of the Kiwanis Club of Trenton and the Ewing Township Historic Preservation Commission. He is also a member of Trenton Cyrus Lodge #5 of Free and Accepted Masons in Pennington, as well as several other coordinate Masonic bodies. Schroeder's other hobbies include playing the organ -- he is a classically trained organist -- and playing tennis. Schroeder received his degree in Electrical Engineering from what is now the College of New Jersey in 1976 and has been a member of the Institute of Electrical and Electronics Engineers (IEEE) for more than 20 years.
William I. Orr, W6SAI, was an engineer, educator and communicator of extraordinary ability. Over a period of 40 years he wrote and edited scores of technical books and articles of interest to amateur radio enthusiasts. His topics ranged from basic electronic theory to microwave communications to the theory, design, construction and magic of antennas. Whether explaining electronic theory or the intricacies of a microwave amplifier for EME communications, Bill had the ability to use a simple, plain language. He wrote about technical subjects in a way that naturally attracted amateurs who had an interest in the topic but lacked a technical background in the area. This fund was established through generous donations by Steve Cornell, K4AHA.

October 23, 2014

RELEASE 14-294

Close Encounters: Comet Siding Spring Seen Next to Mars

http://www.nasa.gov/sites/default/files/comet_springs_0.jpg

This composite NASA Hubble Space Telescope Image captures the positions of comet Siding Spring and Mars in a never-before-seen close passage of a comet by the Red Planet, which happened at 2:28 p.m. EDT October 19, 2014.

Image Credit:
NASA, ESA, PSI, JHU/APL, STScI/AURA

NASA's Hubble Space Telescope has produced a unique composite image of comet Siding Spring as it made its never-before-seen close passage of a comet by Mars.
Siding Spring, officially designated Comet C/2013 A1, made its closest approach to Mars at 2:28 p.m. EDT on Oct. 19, at a distance of approximately 87,000 miles. That is about one-third of the distance between Earth and the moon. At that time, the comet and Mars were about 149 million miles from Earth.
The comet image is a composite of Hubble exposures taken between Oct. 18, 8:06 a.m. to Oct. 19, 11:17 p.m. Hubble took a separate image of Mars at 10:37 p.m. on Oct. 18.
The Mars and comet images have been added together to create a single picture to illustrate the angular separation, or distance, between the comet and Mars at closest approach. The separation is approximately 1.5 arc minutes, or one-twentieth of the angular diameter of the full moon. The background star field in this composite image is synthesized from ground-based telescope data provided by the Palomar Digital Sky Survey, which has been reprocessed to approximate Hubble's resolution.
The solid icy comet nucleus is too small to be resolved in the Hubble picture. The comet's bright coma, a diffuse cloud of dust enshrouding the nucleus, and a dusty tail, are clearly visible.
This is a composite image because a single exposure of the stellar background, comet Siding Spring, and Mars would be problematic. Mars actually is 10,000 times brighter than the comet, so it could not be properly exposed to show detail in the Red Planet. The comet and Mars also were moving with respect to each other and could not be imaged simultaneously in one exposure without one of the objects being motion blurred. Hubble had to be programmed to track on the comet and Mars separately in two different observations.
NASA used its extensive fleet of science assets, particularly those orbiting and roving Mars, to image and study this once-in-a-lifetime comet flyby. In preparation for the comet flyby, NASA maneuvered its Mars Odyssey orbiter, Mars Reconnaissance Orbiter (MRO), and the newest member of the Mars fleet, Mars Atmosphere and Volatile EvolutioN (MAVEN), in order to reduce the risk of impact with high-velocity dust particles coming off the comet. Other NASA space observatories also joined Hubble in observing the encounter, along with ground-based telescopes on Earth.
Siding Spring is the first comet from our solar system's Oort Cloud to be studied up close.

The Oort Cloud, well beyond the outer-most planets that surround our sun, is a spherical region of icy objects believed to be material left over from the formation of the solar system.
The new composite image was taken with Hubble’s Wide Field Camera 3. To view the image, visit:
http://go.nasa.gov/1FJ9cgZ http://go.nasa.gov/1FJ9cgZ

Hinode Captures Images of Partial Solar Eclipse

A partial solar eclipse was visible from much of North America before sundown on Thursday, Oct.23. A partial eclipse occurs when the moon blocks a portion of the sun from view.
The Hinode spacecraft captured images of yesterday’s eclipse as it passed over North America using its X-ray Telescope
http://www.nasa.gov/mission_pages/hinode/instruments.html#telescope. During the eclipse, the new moon eased across the sun from right to left with the Sun shining brilliantly in the background. And as a stroke of good luck, this solar cycle’s largest active region, which has been the source of several large flares over the past week, was centered on the sun’s disk as the moon transited!
Hinode is in the eighth year of its mission to observe the sun. Previously, Hinode has observed numerous eclipses due to its high-altitude, sun-synchronous orbit. As viewed from Hinode’s vantage point in space, this eclipse was annular instead of partial, which means that the entire moon moved in front of the sun but did not cover it completely. In this situation, a ring of the sun encircles the dark disk of the moon.
Led by the Japan Aerospace Exploration Agency (JAXA), the Hinode mission is a collaboration between the space agencies of Japan, the United States, the United Kingdom and Europe. NASA helped in the development, funding and assembly of the spacecraft's three science instruments.
Hinode is part of the Solar Terrestrial Probes (STP) Program within the Heliophysics Division of NASA's Science Mission Directorate in Washington. NASA's Marshall Space Flight Center in Huntsville, Ala., manages the Hinode science operations. The Lockheed Martin Corp. in Palo Alto, Calif., is the lead U.S. investigator for the Solar Optical Telescope.

https://blogs.nasa.gov/orbital/2014/10/24/how-to-view-the-crs-3-launch/#respond
NASA's Wallops Flight Facility and Virginia's Mid-Atlantic Regional Spaceport are set to support the launch of Orbital Sciences' Antares rocket at 6:45 p.m. EDT, Oct. 27.
The Antares rocket will carry Orbital's Cygnus cargo spacecraft, loaded with some 5,000 pounds of supplies and experiments, to the International Space Station http://www.nasa.gov/station. CRS-3 (short for "Commercial Resupply Services") will be the fourth Cygnus flight, including a demonstration flight in 2013, and the first night launch of an Antares rocket.
Public viewing of the launch will be available at the NASA Visitor Center at Wallops http://www.nasa.gov/centers/wallops/visitorcenter, as well as at the Chincoteague National Wildlife Refuge http://www.fws.gov/refuge/chincoteague/ and Assateague Island National Seashore http://www.nps.gov/asis/index.htm. (Wallops visitors are reminded that alcohol and pets are not allowed on Visitor Center grounds.) The Eastern Shore of Virginia Tourism Commission has additional recommendations for local viewing sites http://www.esvatourism.org/space/landing_page_space.asp.
The launch may be visible, weather permitting, to residents throughout the mid-Atlantic and Northeast regions of the United States.
http://blogs.nasa.gov/orbital/wp-content/uploads/sites/234/2014/10/20141015_orb-3_visibility_w-traj_w-title_2.jpg The Antares launch scheduled Oct. 27 will be visible to residents in the mid-Atlantic, weather permitting. Credit: NASA/Wallops Mission Planning Lab

# 3477. Largest sunspot of the current solar cycle

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-10-25 23:33:56 UTC
From: n2kpc@...
Topic: 3477  Message: 3477

RAPID FIRE X-FLARES: Flares have been predicted, sunspot AR2192 has complied. In the past 24 hours, the giant active region has produced two X-class solar flares: X3 (Oct. 24 @ 2140 UT) and X1 (Oct 25 @ 1709 UT). Using a backyard solar telescope http://luntsolarsystems.com/, Sergio Castillo of Corona, California, was monitoring the sunspot on Oct. 24th when it exploded, and he snapped this picture:
http://spaceweathergallery.com/indiv_upload.php?upload_id=103941
"This flare was so intense that it almost shorted out my computer! Well ... not really," says Castillo, "but I knew right away that it was an X-class eruption."
Both X-flares produced brief but strong HF radio blackouts over the dayside of Earth. Communications were disturbed over a wide area for appeoximately one hour after the peak of each explosion. Such blackouts may be noticed by amateur radio operators, aviators, and mariners.
Interestingly, none of the X-flares from this active region has so far produced a major CME. The latest eruptions on Oct. 24-25 appear to be no exception. As a result, Earth-effects may be limited to the radio blackouts. However, stay tuned for updates as analysts look more carefully at coronagraph
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=t5tr450q00dvtllf7n5fkcedk4
data for signs of an incoming CME. Solar flare alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
Realtime Space Weather Photo Gallery http://spaceweathergallery.com/
SUNSET SOLAR ECLIPSE: On Thursday, Oct. 23rd, the New Moon passed in front of the sun, producing a partial solar eclipse visible from almost all of North America. The eclipse was particularly beautiful in eastern parts of the continent where maximum coverage occurred at sunset. "Setting over Hamilton Harbour, the eclipsed sun cast a beautiful orange glow over the end of the perfect autumn day," says John Gauvreau, who sends this picture from Ontario, Canada:
http://spaceweathergallery.com/indiv_upload.php?upload_id=103695
"Magnificent sunspots http://spaceweathergallery.com/full_image.php?image_name=John-Gauvreau-IMG_0256as_1414112766.jpg, magnificent weather, magnificent eclipse!" he says.

Millions of sky watchers in Canada, the USA and Mexico witnessed the afternoon crescent, with coverage ranging from 12% in Florida to nearly 70% in Alaska. Browse the photo gallery http://spaceweathergallery.com/eclipse_gallery.html for more views from the eclipse zone.
Realtime Eclipse Photo Gallery http://spaceweathergallery.com/eclipse_gallery.html
DECADE-CLASS SUNSPOT: Sunspot AR2192, now facing Earth, is the largest sunspot of the current solar cycle. Sprawling across more than 200,000 km of solar terrain, wider than the planet Jupiter, this is the type of sunspot that comes along every 10 years or so. To put AR2192 in context, spaceweather.com reader Hagan Hensley of San Antonio TX placed it beside pictures of two other significant sunspots from the years 2001 and 1947:
http://spaceweathergallery.com/indiv_upload.php?upload_id=103547
"Using Photoshop, I created this composite image of three big sunspots: AR2192 (2014), AR9393 (2001) and the great sunspot of 1947, the largest ever recorded," explains Hensley. "Positions on the solar disk shifted somewhat to avoid overlap."
Spaceweather.com didn't exist in 1947, so we're not sure what happened then. In 2001, however, giant sunspot AR9393 was fully covered by the web site. In March of that year, the

sunspot unleashed multiple X-flares, caused radio blackouts and radiation storms, and sparked red auroras seen as far south as Mexico.
"Good thing these aren't all on the sun at once!" says Hensley. Indeed

The net begins 0800 PM Eastern time.
Meet on 7063 +/-
Please zerobeat to my signal. I will have my filters
Narrow.

Please pause b4 sending last 2 letters of your call.
This helps to reduce doubling or tripling.
Sometimes some one will call out of sequence.
This is understandable. They may hear only NCS.
I will acknowledge then ask you to AS.
AS sent together means WAIT. Until it is your turn
In the list.
Relays are important in any net. Please send
QNB if you have a station I cannot hear.
Enjoy today's phone nets. Keep Lloyd and John busy.

72
Ron wb1hga
TT CW NCS

BTW: cw speeds are limited up to 13 wpm.

Bill AI0D,
As we spoke earlier Bill, ?we ( Marianne VE3MXT and myself ?VE3DWI) were able to get relayed in to the Ten-Tec 10 mtr net by Bob NC5T and I relayed you via Bob as well. So... we all made it hi...hi.
Thanks for the relay Bob. Apparently Lloyd could hear me but I could not understand Lloyd due to heavy Q R M from contest stations as close as 1.5 kHz.
73 all, Tony VE3DWI.

Sent from my BlackBerry 10 smartphone on the Bell network.

The ISS was very bright as it went over head.
The launch was postponed because a boat went to close to the launch site.

So the liftoff will be at 6:33 p.m. and I t5hink the ISS will pass 6 min. later at 6:39 p.mp.
Condition were great but no go.
It is a big rocket so don't miss this one.
The Sun will light up the contrail too

Orbital Antares Rocket at the Launch Pad

The Orbital Sciences Corporation Antares rocket, with the Cygnus spacecraft onboard, is seen on launch Pad-0A, Sunday, Oct. 26, 2014, at NASA's Wallops Flight Facility in Virginia. The Antares will launch with the Cygnus spacecraft filled with over 5,000 pounds of supplies for the International Space Station, including science experiments, experiment hardware, spare parts, and crew provisions. The Orbital-3 mission is Orbital Sciences' third contracted cargo delivery flight to the space station for NASA. The Launch has been rescheduled for Tuesday, Oct. 28, at 6:22:38 p.m. EDT

Gang,
This is getting old. I am growing tired fighting the server to send the log.
I will send it in little while via my tablet.
I have to list log by hand using tablet keyboard.

What a shame. I was watching the launch from my iPhone while outside, waiting to see the rocket as I looked South, but then the explosion occurred. NASA TV launch control said "stay at your consoles", then I was sure I understood what happened. I wonder how logo it will be before they can have another payload ready.

Hi Ron,
The antenna on my truck is a Scorpion Screwdriver 6-160 Meters.
The Tripod is the mast setup with two section for each leg, then you feed the sections up thru the middle of the
tripod to raze the mast one by one.
The are pictures on this site under photos.
There are two pictures on my QRZ page show my FD setup, one Winter FD and Summer FD.
The Winter FD picture show the dipole as a flat top dipole using the SPI-RO D-56 PRO 10-80 meter 87 feet long on the tripod mast using a telescopic painters pole at each end.
The Summer FD picture 2014 shows the D-56 PRO 87 foot six trap dipole as a inverted V and the SPI-RO D-44 PRO10-40 meter, four trap dipole 47 feet as a inverted V.
The fastest way to go, Sure beats using a guided telescoping 35 to 4o foot mast.
Most important is the fact that I can do it alone in three minutes.
73,
Lloyd N2KPC

Here’s Looking at You: Spooky Shadow Gives Jupiter a Giant Eye

This trick that the planet is looking back at you is actually a Hubble treat: An eerie, close-up view of Jupiter, the biggest planet in our solar system. Hubble was monitoring changes in Jupiter’s immense Great Red Spot (GRS) storm on April 21, 2014, when the shadow of the Jovian moon, Ganymede, swept across the center of the storm. This gave the giant planet the uncanny appearance of having a pupil in the center of a 10,000 mile-diameter “eye.” For a moment, Jupiter “stared” back at Hubble like a one-eyed giant Cyclops. Click on the image to view Jupiter from a distance.

Gang,
the net begins at 8 PM Eastern time on 14063.

After you hear QNI, send last 2 letters of your call.
Try to prevent doubling or tripling.

send when you are called, CALL NAME, STATE (ONLY), RADIO AND RST.
Please keep any CW speeds up to 13 WPM. No speeders.

If you cannot be heard by NCS, ask for relay.

see you there,
72
Ron wb1hga
TT CW NCS

I had to turn both the RF to 100% and the AR to about 80% before I heard anything, and even then it is going in and out.

I’m just listening in, and I don’t know if it is net control that I’m hearing. I’m still learning CW. :)

I guess 20 meters has been a very uncooperative.
This band is the pits of late.
I heard only 3 stations and one of them is 239.
As difficult as it was, I got him logged.
Heard no one else.

Good for you Ed ! Keep after it. If you want it, you'll get it with time.

CW is the only reason that I got into the Hobby back in '96. And I'm
still not where I want to be.

Persistence prevails.

I don't know your skill level, but maybe we could have a qso on 40m (at
your speed.)

Have a Great Day!!!!!

I tried my 160m OCF quasi Inverted "V" and my 43ft Vertical and with either antenna I could detect that Ron was in there, a character here and 2 or 3 characters there, but no way near could I hear him well enough to give it a try. I did hear 4 or 5 other stations calling that would have been workable.

Hi George / W2DD,

Now there is certainly no apology necessary George. We all make mistakes, as I am certainly guilty, let me be the first to tell ya. On the contrary, I'm no Police or intend to have a voice in regards to the Team Group here. WE ARE A TEAM as you've heard many times, there is no " I " in Team.

I was just curious of who was posting as was others too I'm sure.

I expect someone to correct me when I make a mistake(s).

All, have a Great Day!

Roger / KI8DU in WV

Wooo Hooo.....

I did make the list. There was quite a bit of uncertainty on my behalf.

The Band was so bad, that I sent every word twice.

In any event, you all, know where I stand on the 20 meter CW net.

And John / K3UR,

I try to keep a running list of the Nets, but the 20 mtr CW net isn't
much worth the effort of picking up a pencil ( LOL)

# 3550. TEN-TEC Net Control Procedures

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-01 22:57:44 UTC
From: n2kpc@...
Topic: 3550  Message: 3550

For all the six TEN-TEC Nets there are rules in place to keep things going smoothly.
This helps also with getting the checkin list to John, K3UR who has a big job put it all together
so everybody get their correct number of checkins logged in and they get their certificates that they work
so hard to get.
When Jim Wharton was President of TEN-TEC all authorized changes, additions, or new Nets were approved
by John, K3UR the Official TEN-TEC Net Manager and still are in place.
When I spoke to Jim Wharton about the New TEN-TEC Ten Meter SSB Net he thought it was a great Idea and
I got the ok to start the net thru John, K3UR as the TEN-TEC Net Manager to go ahead with it.
Ron, WB1HGA's TEN-TEC CW Net was also Approved thru John, K3UR with Jim Wharton contacting John and leaving up to John to authorizing the TEN-TEC CW Net.
Jim Wharton stated to me that all TEN-TEC Nets and everything to do with them are done thru John, K3UR as the TEN-TEC Net Manager with no exceptions.
At no time has anything started without John ,K3UR's approval.
Jim Wharton put John in charge of it all. Period.
I want be sure that everybody's on the same page.
When Net Controls are finished their Net send the TEN-TEC Net results to the TEN-TEC Net Manager, John K3UR at his personal email k3ur@att.net and post it on this site as well promptly.
It becomes a very hard job to produce and compile the file and to type everything up with all that has to be accounted for to do the report to send in for the certificates with delays.
I see that a checkin list was not sent to John, K3UR for the Wednesday night Oct. 29. nor was it listed on this site.
Was there a Net that night? If so the information needs to be posted here and sent to the TEN-TEC Net Manager so that he can get the right count. If not he needs to know that information as well.
Please do not go over the Net Managers Head, go thru the TEN-TEC Net Manager, John K3UR.
I always go thru John as ANM for the TEN-TEC Nets with anything to keep it going right.
Thank You to John, K3UR and the TEN-TEC Net Family for your hard work and time.
Thank You to the TEN-TEC Net Controls for their hard work and time.

OK, Now I am upset.

John had nothing to do with cw nets period.

In fact he was the least involved.

Jim contacted me and we discussed this prospect of offering
certificates.and posting this CW net on TenTec home page. he never
mention anything about John. The young net had been going perhaps a few
weeks.
John, by email, asked to send him the logs. He will submit them.T//hat
is the extent of his involvement.
While I do acknowledge his "management", I posthumously oppose ,the
incorrect fantasy.

Please, lets hear no more. incorrect birth of CW nets

If you use one let me know what you use for the Radial System, how it holds up in the weather,
ice, wind, etc.
How does it compare to a Gap, R-8, MA5V, etc.
Did anybody put one off the ground?

I you got one try it out today when I am taking checkins.
Cheapham.com has them here in NJ and one of the W2ZA DRVA members bought all three.

Did anybody use slinky's for the radials above ground mounting?
For optimum performance, the S9v 43' should be used with at least 16 radials (32 preferred), with each radial at least 0.2 wavelength at the lowest operating frequency. If you have the time and resources, 32 or more radials at least 0.2 wavelength long (or longer) should be considered.

"There is no precise formula to calculate the length of ground-mounted radials because everyone has different soil and soil tends to change the electrical length of the radials. That said, the following table contains suggested lengths for 0.2 wavelength radial wires:

Band Frequency Minimum Radial Length
80 Meters 3.5 MHz 53.5 feet long (53 feet, 6 inches)
40 Meters 7 MHz 26.75 feet long (26 feet, 9 inches)

It is highly recommend that you use the optional S9 Radial Plate to connect and organize your ground radials. The radial plate is also used to provide the critical ground connection for the coax shield, unun, balun or remote antenna tuner."
What did you use? Maybe wire mesh, fence, buried the radials one in in the dirt,

Did you use 2 or 3 radial bundles with each bundle with the wires taped together for 6-80 meters for the S-9 V-43.
Thank You,
Lloyd N2KPC PR

# 3568. NASA-How to Land on a Comet

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-04 03:07:42 UTC
From: n2kpc@...
Topic: 3568  Message: 3568

How to Land on a Comet

Nov 3, 2014: Generally speaking, space missions fall into one of three categories: difficult, more difficult, and ridiculously difficult.

Flybys are difficult. A spaceship travels hundreds of millions of miles through the dark void of space, pinpoints a distant planet or moon, and flies past it at 20 to 30 thousand mph, snapping pictures furiously during an achingly brief encounter.

Going into orbit is more difficult. Instead of flying past its target, the approaching spaceship brakes, changing its velocity by just the right amount to circle the planet. One wrong move and the spacecraft bounces off the atmosphere, becoming an unintended meteor.

Landing is ridiculously difficult. Just play NASA's "Seven Minutes of Terror" video. Watching Curiosity parachute, retrorocket, and sky-crane its way to the surface of Mars rarely fails to produce goosebumps. Since the Space Age began, the space agencies of Earth have succeeded in landing on only six bodies: Venus, Mars, the Moon, Titan, and asteroids 433 Eros and Itokawa.

https://www.youtube.com/watch?v=D5iyZTXiX78&feature=youtu.be A new ScienceCast video previews the first-ever landing on a comet. Play it

In a move that could set a new standard for difficulty, the European Space Agency is about to add a seventh member to the list. On Nov. 12th ESA's Rosetta spacecraft will drop a lander named "Philae" onto the surface of Comet 67P/Churyumov–Gerasimenko.

"How hard is this landing?" asks Art Chmielewski, the US Rosetta Project Manager at JPL. "Consider this: The comet will be moving 40 times faster than a speeding bullet, spinning, shooting out gas and welcoming Rosetta on the surface with boulders, cracks, scarps and possibly meters of dust!"

http://science.nasa.gov/mailing-lists/subscribe/

Rosetta will drop Philae from a height of 22 km as the comet rotates freely below. No active steering will take place during the slow descent.

"Unlike previous landings, where reconnaissance had been done beforehand--at Mars, for instance, we mapped the planet well in advance—Rosetta just started learning about its target a couple of months ago," explains Claudia Alexander, Project Scientist for the U.S. Rosetta Project. "This introduces much more risk."

Rosetta arrived at 67P on August 6, 2014. What it found was shocking. The comet's nucleus is strangely shaped, (one observer has likened it to a "freak-show mushroom") dominated by a pair of mile-wide "knobs" joined by a boulder-strewn "neck." Picking a landing site would not be easy.

http://www.esa.int/Our_Activities/Space_Science/Rosetta/ESA_confirms_the_primary_landing_site_for_Rosetta Click http://www.esa.int/Our_Activities/Space_Science/Rosetta/ESA_confirms

_the_primary_landing_site_for_Rosetta to learn more about landing site J. Credit: ESA.

Rosetta spent more than a month surveying the comet before engineers and scientists gathered in France to make their decision.

"None of the candidate landing sites met all of the operational criteria at the 100% level," says Stephan Ulamec, Philae Lander Manager at the German Aerospace Center (DLR), "but Site J is clearly the best solution."

Site J is a relatively flat, boulder-free location on the smaller of the comet's knobs. It gets plenty of sunlight for the lander's solar panels and has good line-of-sight visibility for communications with Rosetta orbiting overhead.

The descent will take about 7 hours, a drawn-out process that could be enlivened by unpredictable jets of gas emerging from the comet's core.

You thought 7 minutes of terror was bad? "This will be Seven Hours of Terror," says Alexander.

If all goes well, Philae will touch down at walking pace and deploy harpoons to fasten itself to the crusty surface. A suite of 10 sensors on the lander, including a drill for sample collection and an acoustic sounder to probe the comet's sub-surface structure, can then begin an unprecedented study of a comet at point-blank range.

"A comet is unlike any other planetary body that we've attempted to land on," says Alexander. "Getting Philae down successfully will be an incredible achievement for humankind!"

Try your hand at landing a spacecraft on a comet with NASA Space Place's Comet Quest: http://spaceplace.nasa.gov/comet-quest/ http://spaceplace.nasa.gov/comet-quest/

Early Snow on the Great Smokies

A potent weather system with origins in Manitoba, Canada moved south across the Great Lakes on Halloween and blew all the way to Florida, bringing snow and hard frost to regions that do not see either in some winters. The storm system then moved back up the U.S. East Coast and pounded New England with a Nor'easter.
This image shows the southern Appalachian Mountain range, along the border of Tennessee, North Carolina, and South Carolina, as fall color was turned to winter white. The natural-color image was acquired by the Visible Infrared Imaging Radiometer Suite on the Suomi NPP http://www.nnvl.noaa.gov/true.php satellite on Nov. 2, 2014.
Six inches of snow fell in Asheville, North Carolina, where snow usually doesn't fall before Christmas. Higher in the mountains, near Gatlinburg, Tennessee, LeConte Lodge (elevation 6400 feet) reported 22 inches of snow and temperatures of 9 degrees Fahrenheit. In Columbia, South Carolina, measurable snow fell nine days earlier than ever recorded.

From: n2kpc@...
Topic: 3587 Message: 3587

November 6, 2014

MEDIA ADVISORY M14-188

NASA’s Orion Spacecraft Set to Roll out to Launch Pad for its First Flight

NASA’s Orion spacecraft is set to roll out of the Launch Abort System Facility (LASF) at NASA’s Kennedy Space Center in Florida to its launch pad at nearby Cape Canaveral Air Force Station’s Space Launch Complex 37 on Monday Nov. 10, in preparation for liftoff next month on its first space flight.

http://www.nasa.gov/sites/default/files/2014-4380-m_0.jpg

The Orion spacecraft sits inside the Launch Abort System Facility at NASA's Kennedy Space Center in Florida on Nov. 4, 2014

Image Credit:
NASA/Jim Grossman

At 4:30 p.m. EST, NASA Television will air a news briefing live from the LASF before Orion’s move.
Participants in the briefing include:
Robert Cabana, Kennedy Space Center director Ellen Ochoa, Johnson Space Center director Mark Geyer, Orion Program manager Mike Hawes, Lockheed Martin Space Systems Company director of Human Space Flight Programs Media should arrive at Kennedy’s Press Site at 3:45 p.m. to be escorted to the briefing. Following the briefing, media will be escorted back to the Press Site at approximately 5 p.m.
The spacecraft will start its journey to the launch pad at 8 p.m. The rollout will not be carried live on NASA TV, but highlights of the move will air on NASA TV's Video File segments and the agency's website starting Tuesday morning, Nov. 11.
Media should arrive at the Press Site at 7 p.m. Monday to be escorted to the LASF at 7:30 p.m. Following the beginning of the move, media will be escorted back to the Press Site at approximately 8:30 p.m.
Around 10 p.m., the spacecraft will stop in front of Kennedy’s Vehicle Assembly Building for a photo opportunity.
The spacecraft is expected to reach Space Launch Complex 37 at approximately 2 a.m., Tuesday. Media will be escorted to the launch pad at 1 a.m. Following the arrival, media will be escorted back to the press site at approximately 2:30 a.m. The Kennedy newsroom will close no later than 4 a.m.

73,
Lloyd N2KPC PR

# 3588. Your Students Could Be Among the Next to Speak with the Space Station

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-07 03:55:49 UTC
From: n2kpc@...
Topic: 3588 Message: 3588

The deadline to file comments is November 10. ARISS: Your Students Could Be Among the Next to Speak with the Space Station Crew via Ham Radio
December 15 is the deadline for schools and educational institutions and organizations -- formal and informal -- to submit proposals to host an Amateur Radio contact with a member of the International Space Station crew. The Amateur Radio on the International Space Station (ARISS http://www.ariss.org/) program recently announced http://www.arrl.org/files/file/ARISS/ARISS%20Proposal%20Window%20Announcement-Oct-2014.pdf the opening of the application http://www.arrl.org/hosting-an-ariss-contact window. ARISS is especially interested in arranging contact events that will draw large numbers of participants and integrate the radio contact into a well-developed educational plan. Schools and educational organizations may apply individually or with other institutions or organizations. ARISS anticipates that the ham radio contacts between students and the space station will take place between May 1 and December 31, 2015. "ARISS provides an exciting outreach opportunity for the ham radio community to connect with local schools," ARRL Educational Services Manager Debra Johnson, K1DMJ, said. "A scheduled ARISS contact is a voice-only communication via Amateur Radio between the ISS crew and classrooms and communities. ARISS contacts allow education audiences to learn firsthand from astronauts what it is like to work and live in space." By and large, at least one member of an ISS crew complement is licensed, and NASA makes Amateur Radio licensing available to ISS-bound astronauts. Contacts have a question-and-answer format and typically run up to 10 minutes. Crew scheduling and ISS orbits will determine the contact schedule. Educational organizations are encouraged to partner with a local Amateur Radio club or group to handle the technical aspects of the contact. Given the nature of human spaceflight and the complexity of scheduling activities aboard the ISS, organizations must demonstrate flexibility to accommodate changes in contact dates and times. ISS crew members have taken part in scheduled Amateur Radio contacts with students on Earth since December 2000. Amateur Radio organizations around the world; NASA; and space agencies in Russia, Canada, Japan, and Europe sponsor these educational opportunities by providing the equipment and operational support to enable direct communication between crew on the ISS and students around the world via Amateur Radio. The ARRL website has Amateur Radio on the International Space Station http://www.arrl.org/ARISS about the program, including details http://www.arrl.org/hosting-an-ariss-contact on expectations, audience, proposal guidelines and application form, as well as the dates and times of informational sessions. Contact https://us-mg5.mail.yahoo.com/neo/b/compose?to=ariss@arrl.org ARISS with any questions or for additional information.

I have Satellite Antenna setups at my home,, but I use a enhanced Discone Antenna 95% of the time for
the ISS.
The best buy for a Discone is from cheapham.com at $47.95 for the Tram enhanced Discone TRAM-1411
can't be beat.

Tram 1411 Discone Antenna
Specs:
Wide Band Receive from 25 - 1300 MHz. Rust Free Stainless Steel Construction. 1 3/8" Maximum Mast Diameter required for installation (Not Included) Transmit Bands are 26-27, 46-49, 72-144, 220, 440, 900 & 1200 MHz

6 Lower Radials (32 inches), 2 Lower Radials (48-52 inches adjustable) & 8 Upper Radials (10 1/2 inches). Top Whip Length = 55 inches

SO-239 UHF Connector

Max Power: 300 Watts on 26-72 MHz and 200 watts VHF/UHF

You can use it for 26-27, 46-49, 72-144, 220, 440, 900 & 1200 MHz
No gain on 26-27 Mhz.
The nice thing about a discone is that you can hear the ISS and weather satellites when they are overhead and transmit to ISS too.
But you can work the ISS with just about any antenna because it is line of sight.
So good luck,
73,
Lloyd N2KPC PR

Nice antenna Lloyd. Marianne worked astronaut Jim Voss on the ISS☐ on May 2, 2001 with a, ?home made, Copper J-Pole up 25 feet. It was a short but S-9 QSO. She has a very nice QSL card and an audio recording of it too. ?I especially love the end of her transmission.

X-FLARE! Active sunspot AR2205 erupted again on Nov. 7th (1726 UT) producing a potent X1-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=ihupdsnvmilq7fuvv9ben1dih4
solar flare and a CME. Extreme UV radiation from the flare ionized the upper layers of Earth's atmosphere, producing a short-lived HF radio blackout on the dayside of our planet. We do not yet know if the CME is Earth-directed. Stay tuned for updates. Solar flare alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
MARTIAN METEOR SHOWER: Today, NASA held a press conference to discuss what happened when Comet Siding Springs buzzed Mars on Oct. 19, 2014. An international fleet of Mars orbiters observed the encounter using a variety of cameras, radars, and other sensors. Among many findings http://www.nasa.gov/press/2014/november/mars-spacecraft-reveal-comet-flyby-effects-on-martian-atmosphere/, the highlight was a "spectacular meteor shower" detected by NASA's MAVEN spacecraft. MAVEN did not actually see streaks of light in the Martian atmosphere--the spacecraft was sheltering behind the body of Mars during the comet's flyby. But when MAVEN emerged, it found a glowing layer of Mg+ (a constituent of meteor smoke) floating 150 km above the planet's surface:
https://www.youtube.com/watch?v=YQCwezsJnzQ
The "smoke" was made of ionized magnesium and other metals shed by the disintegrating meteoroids. The data are consistent with "a few tons of comet dust being deposited in the atmosphere of Mars," says Nick Schneider, the instrument lead for MAVEN's Imaging Ultraviolet Spectrograph at University of Colorado, Boulder. "A human on the surface of Mars might have seen thousands of shooting stars per hour, possibly a meteor storm." He further speculated that the meteor shower would have produced a yellow afterglow in the skies of Mars because the meteor smoke was rich in sodium ions.
Jim Green, the director of NASA's Planetary Science Division in Washington DC says there was a lot more comet dust hitting Mars than researchers expected, pre-flyby. Radars onboard the ESA's Mars Express spacecraft and NASA's Mars Reconnassance Orbiter also detected signs of meteor-related ions. MAVEN and the other spacecraft are continuing to collect data as the atmosphere of Mars recovers from the encounter. Stay tuned for updates.
FULL MOON AURORAS: Auroras are dancing around the Arctic Circle bright enough to see through the glare of the full Moon. The source of the display is a stream of solar wind that is pressing against Earth's magnetic field. Anne Birgitte Fyhn sends this picture, taken last night at moonrise, from Tromsø, Norway:
http://spaceweathergallery.com/indiv_upload.php?upload_id=104425
"The sky was partly cloudy, and for a couple of minutes some bright and flashing auroras danced above the full Moon and its halo," says Fyhn.
The circular halo around the Moon is a sign of ice crystals in the clouds. Pencil-shaped crystals catch the rays of the Moon and bend them http://www.atoptics.co.uk/halo/circ2.htm into a ring 22o in diameter http://www.atoptics.co.uk/halo/circmoon.htm. Normally, icy clouds and moonlight interfere with the visibility of auroras. In this case, however, they

added an extra dash of beauty.
More moonlit auroras are in the offing. NOAA forecasters estimate a 30% chance of polar geomagnetic storms on Nov. 7th as the solar wind continues to blow. Aurora alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
Realtime Aurora Photo Gallery http://spaceweathergallery.com/aurora_gallery.html http://spaceweathergallery.com/
UPSIDE DOWN RAINBOWS: 'tis the season for upside-down rainbows. Just this week, one appeared over Sumirago (Varese), Italy:
http://spaceweathergallery.com/indiv_upload.php?upload_id=104360
"Bright and multi-colored, it was visible from 10 a.m. until sunset," reports photographer Paolo Bardelli.
The technical name for this phenomenon is circumzenithal arc
http://www.atoptics.co.uk/halo/cza.htm or "CZA" for short--and it's no rainbow. CZAs are formed by sunlight shining through plate-shaped ice crystals in high clouds. Atmospheric optics expert Les Cowley calls it "the most beautiful of all ice haloes." First timers often describe the CZA as an 'upside down rainbow' and "someone has also likened it to 'a grin in the sky,'" he adds.
Circumzenithal arcs typically appear in late autumn and early winter when the air is icy http://www.atoptics.co.uk/halo/czaform.htm and the sun is low
http://www.atoptics.co.uk/halo/czasalt.htm. "The CZA forms only when sun is less than 32.3° high," notes Cowley. As winter solstice approaches, "upside down rainbows" will become increasingly common. Look for them!

Hi John,
Thank You for nice mobile pictures and I like your operating "picnic table portable" on solar/battery power while out camping.
I do it as well up at the W2ZQ Shack with my Aliner Camper several time a month.
I was using it today and even with the big antenna farm 100 feet away I still enjoy hopping into the RV and
working portable just because it is fun.
Hope to work you and others from mobile.
I use solar and battery as well in the RV.

# 3605. Veterans' Day

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-09 19:13:52 UTC
From: Rick - DJ0IP / NJ0IP
Topic: 3605  Message: 3605

We seem to associate veterans with "war", and tend to forget the happiness they have brought to so many people around the world.

Although Veterans' Day is in 2 more days, TODAY is also a very special day.

25 years ago today, the Berlin Wall was "brought down". (It did not just "fall".)

Many factor contributed to the bringing down of the wall, including:

. The determination of the people of the East to obtain their freedom.

. The willingness of Michai Gorbatschov to let it come down without taking a military action.

. Ronald Reagan's consequent pursuit of his double-strategy towards the East (offering a choice of peace or all out arms race).

. AND The men and women serving in Berlin in the US Army of Occupation, together with their British and French Counterparts.

IMO it was the synergy of all of this which ultimately lead to the event that happened 25 years ago today.

I'm proud to have been one tiny little tin soldier in the Berlin Army of Occupation (40 years ago) and for that reason, 25 years ago from tomorrow, I flew from Munich to Berlin and spent three days helping others TEAR THAT WALL DOWN WITH OUR BARE HANDS!

(It didn't just fall down.)

BTW, we also partied very hard.

See: http://www.dj0ip.de/gallery/tearing-down-berlin-wall/

Yes, this year the veterans have one additional feather in their caps to celebrate.

"25 years of Freedom for a country whose people benefited from the efforts of our veterans."

BTW2: I had the honor of serving with and the privilege of personally knowing "the Candy Bomber", Colonel Gail "Hal" Halvorsen.

He was the US Air Force pilot who dropped tiny parachutes (made from hankies) with baskets of raisens, candy and gum to the children of Berlin, during the Berlin Airlift.

In 2012 the Mormon Tabernacle Choir did a special program entitled "Christmas from Heaven" about his candy drops.

See: http://en.wikipedia.org/wiki/Gail_Halvorsen

The price was dear, but so were the rewards.

*Restaurant's offering discounts on Veterans Day and throughout November include:*

54th Street Grill – Veterans and active-duty military get a free meal (up to $12).

Applebee’s – Veterans and active-duty military receive a free meal from a limited menu.

Bob Evans – Veterans and active military personnel receive free all-you-can-eat hotcakes.

California Pizza Kitchen – Veterans and active-duty military receive a complimentary entrée from a special menu.Cattlemens – Active, inactive and retired military personnel get a free small sirloin steak dinner.

Carrabba’s – All active and retired veterans get a free appetizer Nov. 8-11.CentraArchy Restaurants – Veterans and active-duty military get a free entrée and 25 percent off for their accompanied family and friends at participating restaurants.

Cheeseburger in Paradise – Active and retired military personnel receive a complimentary All-American Burger with fries.

Claim Jumper – Veterans get a complimentary meal from a special menu on Nov. 10.

Denny’s – Active, inactive and retired military personnel get a free Build Your Own Grand Slam from 5 a.m. to noon at participating locations.

Friendly’s – Veterans and active-duty military get a free breakfast, lunch or dinner from a limited menu.

Golden Corral – Golden Corral Restaurants' Military Appreciation Monday free dinner will be available Nov. 17 from 5-9 p.m. Military retirees, veterans, active duty, National Guard and reserves are all welcome.

Handel’s Homemade Ice Cream – Veterans and active-duty military get a free single-scoop ice cream cone at participating locations.

Hooters – Veterans and active-duty military get a free meal up to $10.99 in value with a drink purchase at participating locations .

JJ’s Red Hots – Veterans and active-duty military get an unlimited free meal.

Krispy Kreme – Veterans get a free doughnut and small coffee at participating locations.

LongHorn Steakhouse – Veterans and active-duty servicemembers receive a complimentary Texas Tonion appetizer and non-alcoholic beverage from a select menu.

Max & Erma's – Participating Max & Erma’s locations are offering veterans and active military personnel a free Best Cheeseburger in America Combo meal.

McCormick & Schmick’s Seafood Restaurants – Participating locations are offering a complimentary entree to veterans from a special menu.

Menchi's – Veterans and active-duty military get a free 6-ounce frozen yogurt.

MOD Pizza – Veterans and active-duty military get a free individual, artisan-style pizza or hand-tossed salad.

Olive Garden – Veterans and active-duty servicemembers get a free meal from a limited menu.

On the Border – Veterans and active-duty military get a free meal from the “Create Your Own Combo" menu.

Orange Leaf -- Retired and active-duty military get a free cup of froyo.

Outback Steakhouse – Active and former servicemembers receive a free Bloomin’ Onion and beverage. Also, active and former servicemembers get 15 percent off their meals Nov. 12 through Dec. 31.

Pie Five Pizza – Active-duty, reserve and retired servicemembers get a free customized pizza.

Pinnacle Entertainment – Veterans and active-duty military get a free meal at select casinos.

Red Hot & Blue – Veterans receive a free entrée with the purchase of a second entrée from Nov. 10-12. Coupon required.

Red Lobster – Veterans, retired and active-duty military personnel receive a complimentary appetizer from a limited menu from Nov. 10-13.

Shoney's – Veterans and active-duty servicemembers get a free All-American Burger.

Sizzler – Active-duty and veteran military members get a free lunch from a limited menu until 4 p.m.

Spaghetti Warehouse – Buy one entrée and get the second entrée free. This deal requires a coupon, which is available starting Nov. 4.

Texas Roadhouse – Veterans, active duty and retired military get a free lunch from 11:00 a.m. to 2:00 p.m.

Tim Hortons Café & Bake Shop – Active-duty military and veterans receive a free donut all day.

Travel Centers of America – CDL drivers who are military veterans eat free at participating full-service restaurants.

Tubby's – Veterans and active-duty military members get a free small Grilled Steak N' Cheese or Tubby's Famous Sub.

Zoes Kitchen – Active-duty military and veterans get a free entrée, and family members get 10 percent off.

A somewhat long but cute story and it is absolutely true.

Just before landing at Berlin Tegel airport on Friday, November 10th, 1989, while sitting in Business class in a Lufthansa flight, I asked the stewardess (that's what we called them back then) for some Champagne. She brought me one small "Piccolo" bottle of French Champagne.

I asked her for some more, perhaps 5 or 6 bottles and told her it was for a good cause. She replied politely with, "I'm sorry sir, we don't do that." - in German of course.

Then I told her I wanted to share the Champagne with the German "Vopos" – which means "Volks' Ploizei"- (People's Police), whom I had watched on TV, standing on the wall smiling, with no guns visible. I had never seen Vopos without guns before. Sorry, I mean "weapons", not guns. (in case my drill sergeant reads this)

She replied, "We do 'that'" and brought me a plastic bag with 5 more Piccolos.

When I arrived in Berlin, I did my little detour to the "Bauhaus" to buy my sledge hammer, hid it in my backpack then walked to the Brandenburg Gate carrying the bag of Champagne in my hand.

At the site, I climbed up the wooden ladder, went over to the Vopos and asked (in German) to speak to whoever was in charge.

One man came forward.
I smiled and said I had brought he and his men a gift; 'REAL' French Champagne.
I asked permission to give it to his men.
His eyes lit up. I suppose they all did but I was only watching him.

I handed him the plastic bag and stood there watching as they opened all 6 bottles and began passing them around.
Then one of the men said, "that tastes just like German Sekt." (a German sparkling wine)

I replied, "young man, you have just had your first taste of western democracy; it is just like German Sekt, it just costs 4 times more!"

And yes, I got a sip too. I drank Champagne with them.

I bet I am the only American ham who ever drank French Champagne with the East German Vopos on top of the Berlin Wall.

The picture of me on my web toasting to the bringing down of the wall is actually with an empty Piccolo bottle. The Vopos drank it all.

Thinking back on that experience, it kinda reminds me of the Eagle.
You can buy an Eagle which is a very very good radio, or choose to pay 6 times more for a Japanese radio which for all practical purposes, is no better. (hi)

Space Station Crew Returns to Earth, Lands Safely in Kazakhstan

http://www.nasa.gov/sites/default/files/14-309a.jpg

European Space Agency astronaut Alexander Gerst (left), Russian cosmonaut Maxim Suraev (center) and NASA astronaut Reid Wiseman pose for a portrait in the Harmony node of the International Space Station. The three crew members of Expedition 41 returned to Earth at 10:58 p.m. EDT Sunday, Nov. 9.

Image Credit:
NASA

Three International Space Station (ISS) crew members returned to Earth Sunday after a 165-day mission that included hundreds of scientific experiments and several spacewalks. Expedition 41 Commander Max Suraev of the Russian Federal Space Agency (Roscosmos) and Flight Engineers Reid Wiseman of NASA and Alexander Gerst of the European Space Agency touched down northeast of the remote town of Arkalyk in Kazakhstan at 10:58 p.m. EST (9:58 a.m., Nov. 10, Kazakh time). While in space, they traveled more than 70 million miles.
During their time aboard the station, the crew participated in research focusing on Earth remote sensing, advanced manufacturing, and studies of bone and muscle physiology. They set a milestone for station science by completing a record 82 hours of research in a single week in July.
A key research focus during Expedition 41 was human health management for long duration space travel, as NASA and Roscosmos prepare for two crew members to spend one year aboard the space station beginning in 2015.
The crew welcomed five cargo spacecraft during its time aboard the orbiting laboratory. Two Russian ISS Progress cargo vehicles docked to the station, bringing tons of supplies in July and October. The fifth and final European Automated Transfer Vehicle, dubbed the Georges Lemaitre after the Belgian physicist who is considered the father of the big-bang theory, launched to the station in July.
In July, Orbital Sciences' Cygnus spacecraft completed its second resupply mission under NASA's Commercial Resupply Services contract. SpaceX launched its Dragon spacecraft to the station in September, the company's fourth commercial resupply mission.
Wiseman and Gerst ventured outside the confines of the space station for a planned spacewalk to relocate a failed pump module and configure the station for upcoming additions. Wiseman completed a second spacewalk with fellow NASA astronaut Barry Wilmore. Suraev also conducted one spacewalk during Expedition 41.
In addition to being a scientific research platform, the space station also serves as a test bed to demonstrate new technology. The first 3-D printer to be tested in space arrived at the station during Expedition 41. It will be the first step toward establishing an on-demand machine shop in space, which is a critical enabling component for deep space crewed missions and in-space manufacturing.
A new Earth monitoring instrument called RapidScat also was installed and activated on the station during the crew’s time in orbit. RapidScat will measure Earth's ocean surface wind speed and direction, essential measurements used in weather prediction.
Having completed his second space station mission, Suraev now has spent 334 days in space.

Wiseman and Gerst have spent 165 days in space with the end of their first flights. Expedition 42 now is operating aboard the station with Barry Wilmore of NASA in command. Wilmore and his crewmates, Flight Engineers Alexander Samokutyaev and Elena Serova of Roscosmos, will tend to the station as a three-person crew until the arrival in two weeks of three new crew members: Terry Virts of NASA, Anton Shkaplerov of Roscosmos and Samantha Cristoforetti of the European Space Agency. Virts, Shkaplerov and Cristoforetti are scheduled to launch from Kazakhstan on Nov. 23 (U.S. time).
For more information on the International Space Station and its crews, visit:

History of Veterans Day
World War I – known at the time as “The Great War” - officially ended when the Treaty of Versailles was signed on June 28, 1919, in the Palace of Versailles outside the town of Versailles, France. However, fighting ceased seven months earlier when an armistice, or temporary cessation of hostilities, between the Allied nations and Germany went into effect on the eleventh hour of the eleventh day of the eleventh month. For that reason, November 11, 1918, is generally regarded as the end of “the war to end all wars.”

Soldiers of the 353rd Infantry near a church at Stenay, Meuse in France, wait for the end of hostilities. This photo was taken at 10:58 a.m., on November 11, 1918, two minutes before the armistice ending World War I went into effect
In November 1919, President Wilson proclaimed November 11 as the first commemoration of Armistice Day with the following words: "To us in America, the reflections of Armistice Day will be filled with solemn pride in the heroism of those who died in the country’s service and with gratitude for the victory, both because of the thing from which it has freed us and because of the opportunity it has given America to show her sympathy with peace and justice in the councils of the nations…"
The original concept for the celebration was for a day observed with parades and public meetings and a brief suspension of business beginning at 11:00 a.m.
The United States Congress officially recognized the end of World War I when it passed a concurrent resolution on June 4, 1926, with these words:
Whereas the 11th of November 1918, marked the cessation of the most destructive, sanguinary, and far reaching war in human annals and the resumption by the people of the United States of peaceful relations with other nations, which we hope may never again be severed, and
Whereas it is fitting that the recurring anniversary of this date should be commemorated with thanksgiving and prayer and exercises designed to perpetuate peace through good will and mutual understanding between nations; and
Whereas the legislatures of twenty-seven of our States have already declared November 11 to be a legal holiday: Therefore be it Resolved by the Senate (the House of Representatives concurring), that the President of the United States is requested to issue a proclamation calling upon the officials to display the flag of the United States on all Government buildings on November 11 and inviting the people of the United States to observe the day in schools and churches, or other suitable places, with appropriate ceremonies of friendly relations with all other peoples.
An Act (52 Stat. 351; 5 U. S. Code, Sec. 87a) approved May 13, 1938, made the 11th of November in each year a legal holiday—a day to be dedicated to the cause of world peace and to be thereafter celebrated and known as "Armistice Day." Armistice Day was primarily a day set aside to honor veterans of World War I, but in 1954, after World War II had required the greatest mobilization of soldiers, sailors, Marines and airmen in the Nation’s history; after American forces had fought aggression in Korea, the 83rd Congress, at the urging of the veterans service organizations, amended the Act of 1938 by striking out the word "Armistice" and inserting in its place the word "Veterans." With the approval of this legislation (Public Law 380) on June 1, 1954, November 11th became a day to honor American

veterans of all wars.
Later that same year, on October 8th, President Dwight D. Eisenhower issued the first "Veterans Day Proclamation" http://www.va.gov/opa/vetsday/docs/proclamation_1954.pdf which stated: "In order to insure proper and widespread observance of this anniversary, all veterans, all veterans' organizations, and the entire citizenry will wish to join hands in the common purpose. Toward this end, I am designating the Administrator of Veterans' Affairs as Chairman of a Veterans Day National Committee, which shall include such other persons as the Chairman may select, and which will coordinate at the national level necessary planning for the observance. I am also requesting the heads of all departments and agencies of the Executive branch of the Government to assist the National Committee in every way possible."

President Eisenhower signing HR7786, changing Armistice Day to Veterans Day. From left: Alvin J. King, Wayne Richards, Arthur J. Connell, John T. Nation, Edward Rees, Richard L. Trombla, Howard W. Watts
On that same day, President Eisenhower sent a letter to the Honorable Harvey V. Higley, Administrator of Veterans' Affairs (VA) http://www.va.gov/opa/vetsday/docs/eisenhower_letter.pdf, designating him as Chairman of the Veterans Day National Committee.
In 1958, the White House advised VA's General Counsel that the 1954 designation of the VA Administrator as Chairman of the Veterans Day National Committee applied to all subsequent VA Administrators. Since March 1989 when VA was elevated to a cabinet level department, the Secretary of Veterans Affairs has served as the committee's chairman.
The Uniform Holiday Bill (Public Law 90-363 (82 Stat. 250)) was signed on June 28, 1968, and was intended to ensure three-day weekends for Federal employees by celebrating four national holidays on Mondays: Washington's Birthday, Memorial Day, Veterans Day, and Columbus Day. It was thought that these extended weekends would encourage travel, recreational and cultural activities and stimulate greater industrial and commercial production. Many states did not agree with this decision and continued to celebrate the holidays on their original dates.
The first Veterans Day under the new law was observed with much confusion on October 25, 1971. It was quite apparent that the commemoration of this day was a matter of historic and patriotic significance to a great number of our citizens, and so on September 20th, 1975, President Gerald R. Ford signed Public Law 94-97 (89 Stat. 479), which returned the annual observance of Veterans Day to its original date of November 11, beginning in 1978. This action supported the desires of the overwhelming majority of state legislatures, all major veterans service organizations and the American people.
Veterans Day continues to be observed on November 11, regardless of what day of the week on which it falls. The restoration of the observance of Veterans Day to November 11 not only preserves the historical significance of the date, but helps focus attention on the important purpose of Veterans Day: A celebration to honor America's veterans for their patriotism, love of country, and willingness to serve and sacrifice for the common good
AMEN

Yes the band was "testy". Again, Rich (N0ENO) came to the rescue
providing a relay for Andy (W3LI).
I can only hope 20 meters will be better tomorrow night.

# 3638. Daddy's Poem. Worth the read.

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-12 00:24:03 UTC
From: Tony Lelieveld
Topic: 3638  Message: 3638

From: Marianne VE3MXT

Appropriate for Remembrance day.

Wow how special is this.. :) :)

Daddy's Poem.

Her hair was up in a ponytail,
her favorite dress tied with a bow.
Today was Daddy's Day at school,
and she couldn't wait to go.

But her mommy tried to tell her,
that she probably should stay home.
Why the kids might not understand,
if she went to school alone.

But she was not afraid;
she knew just what to say.
What to tell her classmates
of why he wasn't there today.

But still her mother worried,
for her to face this day alone.
And that was why once again,
she tried to keep her daughter home.

But the little girl went to school
eager to tell them all.
About a dad she never sees
a dad who never calls.
There were daddies along the wall in back,
for everyone to meet.
Children squirming impatiently,
anxious in their seats

One by one the teacher called
a student from the class.
To introduce their daddy,
as seconds slowly passed.

At last the teacher called her name,
every child turned to stare.
Each of them was searching,
a man who wasn't there.

'Where's her daddy at?'
She heard a boy call out.
'She probably doesn't have one,'
another student dared to shout.

And from somewhere near the back,
she heard a daddy say,
'Looks like another deadbeat dad,
too busy to waste his day.'

The words did not offend her,
as she smiled up at her Mom.
And looked back at her teacher,
who told her to go on.

And with hands behind her back,
slowly she began to speak.
And out from the mouth of a child,
came words incredibly unique.

'My Daddy couldn't be here,
because he lives so far away.
But I know he wishes he could be,
since this is such a special day.

And though you cannot meet him,
I wanted you to know.
All about my daddy,
and how much he loves me so.

He loved to tell me stories
he taught me to ride my bike.
He surprised me with pink roses,
and taught me to fly a kite.

We used to share fudge sundaes,
and ice cream in a cone.
And though you cannot see him.
I'm not standing here alone.

'Cause my daddy's always with me,
even though we are apart
I know because he told me,
he'll forever be in my heart'

With that, her little hand reached up,
and lay across her chest.
Feeling her own heartbeat,
beneath her favorite dress.
And from somewhere here in the crowd of dads,
her mother stood in tears.
Proudly watching her daughter,
who was wise beyond her years.

For she stood up for the love
of a man not in her life.
Doing what was best for her,
doing what was right.

And when she dropped her hand back down,
staring straight into the crowd.
She finished with a voice so soft,
but its message clear and loud.

'I love my daddy very much,
he's my shining star.
And if he could, he'd be here,
but heaven's just too far.

You see he is a Canadian soldier
And he died just this past year

When a roadside bomb hit his convoy
and taught Canadians what to fear.
But sometimes when I close my eyes,
it's like he never went away.'
And then she closed her eyes,
and saw him there that day.

And to her mother’s amazement,
she witnessed with surprise.
A room full of daddies and children,
all starting to close their eyes.

Who knows what they saw before them,
who knows what they felt inside.
Perhaps for merely a second,
they saw him at her side.

'I know you're with me Daddy,'
to the silence she called out.
And what happened next made believers,
of those once filled with doubt.

Not one in that room could explain it,
for each of their eyes had been closed.
But there on the desk beside her,
was a fragrant long-stemmed rose.

And a child was blessed, if only for a moment,
by the love of her shining star.
And given the gift of believing,
that heaven is never too far.

Send this to the people you'll never forget and
remember to send it also to the person that sent
it to you. It's a short message to let them know
that you'll never forget them.

If you don't send it to anyone, it means you're in a hurry and that you've forgotten your friends.

Take the time...to live and love.
Until eternity. God bless!

|

  Her hair was up in a ponytail,
her favorite dress tied with a bow.
Today was Daddy's Day at school,
and she couldn't wait to go.

But her mommy tried to tell her,
that she probably should stay home.
Why the kids might not understand,
if she went to school alone.

But she was not afraid;
she knew just what to say.
What to tell her classmates
of why he wasn't there today.

But still her mother worried,
for her to face this day alone.
And that was why once again,
she tried to keep her daughter home.

But the little girl went to school
eager to tell them all.
About a dad she never sees
a dad who never calls. There were daddies along the wall in back,
for everyone to meet.
Children squirming impatiently,

Hi all,

The TEN-TEC 20 mtr SSB net will be this afternoon on 14.325 MHz +/- starting at 14:00 hr. EST or, for people living in other time zones, 19:00 UTC.
Please "zero beat" net control and when asking for check-ins, give the last two (2) letters of your call. Hope to hear you all. Normally I do not mention the CW net but a change has been made. From now on forward the 20 mtr CW net will be on 40 mtr 7.063 MHz +/- at 20:00 hr. EST or 01:00 UTC.

73, Tony VE3DWI. NCS

# 3644. Ten Tec CW net tonight

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-11-12 17:29:48 UTC
From: ron
Topic: 1236  Message: 3644

Hello Ten Tekkies!

A reminder the CW net will begin tonight at 0100 UTC (8 PM Eastern) on 7063.

PLEASE NOTE:
Tonight's net will be on 40 meters NOT 20 meters.

BRIEF REVIEW

Please send last 2 letters of your call. Pause B4 sending, as it helps
to reduce
doubling or tripling.
I build a list to call from and will build another list during the net.
If I didn't copy you, ask for relay (QNB).

This is a slow speed net. Please limit speed up to 13 wpm.
Send at speed you are comfortable with. I will match your speed.

EXCHANGE
CALL NAME STATE (only) RADIO RST

Everyone is welcome and it need not be a Ten Tec radio.
You earn points toward a Ten Tec certificate.

The purpose of the CW nets is to promote CW activity
and providing a forum to copy and practice CW.

History Made Today. European Spacecraft Touches Down on Comet
By Peter B. de Selding http://www.spacenews.com/users/peter-b-de-selding | Nov. 12, 2014

http://www.spacenews.com/sites/spacenews.com/files/images/articles/PhilaeinSpace_ESA4X3_0.jpg

An image taken of Rosetta's Philae lander by its OSIRIS camera en route to Comet 67P. Credit: ESA/Rosetta/MPS image

UPDATED at 4:26 p.m. EDT
PARIS — Europe on Nov. 12 successfully placed a 100-kilogram lander on a comet 500 million kilometers from Earth following a seven-hour descent from a satellite that had been chasing the comet for 10 years.
Mission managers at the European Space Agency’s European Space Operations Centre in Darmstadt, Germany, confirmed that the Philae lander had touched down, apparently softly, on Comet 67P. The lander appeared to be in good health and was sending signals.
Less clear was whether it had secured a stable purchase on the comet’s surface. Early telemetry suggested that the two harpoons that were to drive into the comet, up to 2 meters in depth, to fix Philae into place may not have deployed correctly.
The possibility of making another attempt at harpooning the surface had not yet been confirmed.
Rosetta and Philae managers had known all day Nov. 12 that fixing Philae to the surface would be even more complicated than originally thought because its Active Descent System of cold-gas thrusters, designed to push Philae against the surface for several seconds before harpoon deployment, did not function.
Philae teams had hoped that the early indications of the thruster dysfunction might have been an error message, but the post-touchdown telemetry confirmed that the system did not work.

Credit: NASA

The fact of touching down on a comet is itself an exploit. What is yet unclear is whether Philae, equipped with 10 experiments and designed to operate for at least 60 hours to characterize the comet’s surface, interior and chemical composition, will be able to perform much of its work.
Comet 67P has very little gravity. The Philae lander’s equivalent weight on Earth would be about 1 gram — a small sheet of paper landing on a floor. It would not take much on a comet shedding dust and water every day to disturb the lander’s position if it is not fastened tightly to the surface.
At a press briefing, ESA officials said they were still sorting through occasionally confusing telemetry purporting to show what happened to Philae.
Stephan Ulamec, Philae program manager at the German Aerospace Center, DLR, said that as difficult as it is to land on a comet, it is also difficult to determine what happens once on the surface.
Philae landed in the targeted zone and is functioning, Ulamec said. But its harpoon anchoring system did not deploy despite earlier indications that it had. He said it was

unclear whether Philae landed in a sandbox-type surface composition, and that the variations in some of the telemetry needed to be further studied overnight.
What is also certain, he said, is that Philae’s instruments have already begun sending science data to the Rosetta orbiter for relay back to Earth.
From this data, he said, it appeared that Philae landed, bounced and then relanded a second time. Fluctuations in the radio link to the Rosetta satellite lead to this conclusion, he said.
ESA’s Rosetta flight director, Paolo Ferri, said at the briefing that Philae landed right on target, even assuming a bounce and second landing.

Hi John,
Missed you on 14.325 yesterday. Nice video but some of the equipment was hard to see in the dark. I liked the Heathkit monitor scope. I have one too and will have to put it in action. You gave me an idea as I too have a Pioneer audio amplifier which was my stereo amp in the early 70's. I still have it and I am going to☐ make use of it too.

As you saw in my posted log, we didn't do too bad.
The only problem is the digital interference.
We went down one K and ran the net from there.
Many thanks to Ray KK4BE, Rich N0ENO and Tony VE3DWI for relays.
With their help, 10 stations logged in.
See you again Monday night.

John,

I had the same problem with my camera until I started using a spot light behind the camera to shine on the subject being shown.

Welcome to a Comet, from Lander on Surface

The Philae lander of the European Space Agency's Rosetta mission is safely on the surface of Comet 67P/Churyumov-Gerasimenko, as these first two images from the lander's CIVA camera confirm. One of the lander’s three feet can be seen in the foreground. The view is a two-image mosaic taken on Nov. 12, 2014.
The lander separated from the orbiter at 09:03 UTC (1:03 a.m. PST) for touch down on comet 67P seven hours later.
Rosetta and Philae had been riding through space together for more than 10 years. Philae is the first probe to achieve soft landing on a comet, and Rosetta is the first to rendezvous with a comet and follow it around the sun. The information collected by Philae at one location on the surface will complement that collected by the Rosetta orbiter for the entire comet.
Rosetta is a European Space Agency mission with contributions from its member states and NASA. Rosetta's Philae lander is provided by a consortium led by the German Aerospace Center, Cologne; Max Planck Institute for Solar System Research, Gottingen; French National Space Agency, Paris; and the Italian Space Agency, Rome. NASA's Jet Propulsion Laboratory, a division of the California Institute of Technology, Pasadena, manages the U.S. participation in the Rosetta mission for NASA's Science Mission Directorate in Washington. Rosetta carries three NASA instruments in its 21-instrument payload.
For more information on the U.S. instruments aboard Rosetta, visit: http://rosetta.jpl.nasa.gov http://rosetta.jpl.nasa.gov/ . For more information about Rosetta, visit http://www.esa.int/rosetta http://www.esa.int/rosetta .

Ron,

I enjoyed doing the relay but I was a little rusty. What is your preferred way and sequence for relaying CW stations? I know you have mentioned it in the past but I probably deleted that email.

Thanks es 73, Tony VE3DWI.

As you saw in my posted log, we didn't do too bad.
The only problem is the digital interference.
We went down one K and ran the net from there.
Many thanks to Ray KK4BE, Rich N0ENO and Tony VE3DWI for relays.
With their help, 10 stations logged in.
See you again Monday night.

Hi Tony

When you hear a station NCS cannot hear, send "QNB (relay) De your call"
NCS will reply "QNB k".
(Sometimes I just send "K")
You then gather that station's exchange. When complete,  you
Again send "QNB De your call".
I again send "qnb your call k".
You then send that station's exchange.

Hope you are keeping warm up there with your woodstove.

A friend of us send me this picture of the new Michigan Amateur Radio License Plate. It's a beautiful one.

Subject: New Michigan Amateur Radio License Plate

Hello Friends:

I noticed the the State of Michigan had a new Amateur Radio Operator vehicle license plate, in a new style, and I ordered one a few weeks ago. I think it is very attractive, and am sending you a pic. I do feel people should be aware of this new plate.

This plate cost me $7. The plain amateur radio plate is no cost.

Welcome to the Jersey Shore Amateur Radio Society
JSARS, The Jersey Shore Amateur Radio Society, has been serving the Jersey Shore amateur radio community for over 35 years! With the largest membership http://www.jsars.org/?q=node/11, nightly Traffic Net http://www.jsars.org/?q=node/2, monthly V.E. Test http://www.jsars.org/?q=node/15 Sessions, and the best attended events the club is a friend to the local ham, their family, and the community. We have gatherings each Thursday (except holidays), around 5 pm. at Riverwood Park http://www.jsars.org/?q=node/8, Toms River, there is always something going on! Second Thursday of the month is the clubs Business Meeting, with the Third Thursday being the Test session. The club and its activities are supported by the members http://www.jsars.org/?q=node/12. From our two yearly Ham Fests, radio support events, Field Day weekend, and Holiday Party, the memories are numerous. There is something for everyone, come by and check us out or give a call on one of the club sponsored repeaters http://www.jsars.org/?q=node/3. Remember there is no club with out you. This is your club, come and make a difference

PR
Welcome to the Jersey Shore Amateur Radio Society
JSARS, The Jersey Shore Amateur Radio
Society, has been serving the Jersey Shore amateur radio community for over 35 years! With the largest membership, nightly Traffic Net, monthly V.E. Test Sessions, and the best attended events the club is a friend to the local ham, their family, and the community. We have gatherings each Thursday (except holidays), around 5 pm. at Riverwood Park, Toms River, there is always something going on! Second Thursday of the month is the clubs Business Meeting, with the Third Thursday being the Test session. The club and its activities are supported by the members. From our two yearly Ham Fests, radio support events, Field Day weekend, and Holiday Party, the memories are numerous. There is something for everyone, come by and check us out or give a call on one of the club sponsored repeaters. Remember there is no club with out you. This is your club, come and make a difference73,Lloyd N2KPC PR

# 3682. TEN-TEC 10 METER SSB NET HAD 23 CHECKINS TODAY 11-16-2014

23 Checkins NJ-10, KS-2, TX-2 CN-2, NC-1, AZ-1, LA-1, AR-1, MA-1, MI-1, C0-1.

Not bad at all with the Contest going on at the same time.

I wish to thank
K1TU BOB AR TS-940 HE KINDLY LET ME USE HIS FREQ.

which he had been on for over a hour contesting.

That was very nice and he checked in too.

C U Next Week and don't forget WB1HGA, Ron's TEN TEC CW Net tomorrow.

73,
Lloyd N2KPC NCS

----- Forwarded Message -----
Subject: Signal One CX-7

Since John asked, here is some info on the Signal One I use for checking in sometimes on the 40M net. Thought it might be of interest to some of the other folks out there.My CX-7A was bought new in 1970 by W9IVG (SK). The radio was one of the first if not the very first to offer features such as dual PTO's with the ability to monitor both simultaneously, IF shift, full noise blanker, frequency counter display via Nixie tubes, built in electronic keyer (TO style, no iambic yet) and completely solid state except for the 8072 PA which ran at up to 300w PEP input all bands and modes. It used 16 digital ic's, 14 linear ic's, 100 transistors and the ceramic/metal power tube which was conduction cooled via a beryllium block/heat sink. The power transformer was also one of the first using the new hypersil technology. My unit also has the original matching speaker but unfortunately, the matching microphone was not to be found when I got the radio though it is shown on Herb's QSL photo. There is a Signal One website where more can be learned about these cutting edge radios. As shown in my photo, I think enough of the CX-7 to use it as the backup to my Original Orion. 73 ... a reminder tonight the 40 mtr cw net takes place at 8:00 PM (eastern time) 0100 GMT.
on 7063. If occupied, I may move down a bit.
Send last 2 letters of your call. Please pause to prevent doubling and tripling.
Please relay (QNB) any station that NCS cannot hear.

If you hear a station requesting such, send QNB then yourcall.
I will send QNB K.
You then proceed to gather data. When finish, send QNB yourcall (again).
I will send QNB yourcall K. You then relay station info to me.

Please this is a slow speed net. We encourage anyone to check in regardless of cw proficiency. Speed limit up to 13 WPM.

see you tonight!

It was touch and go during the net as sum confusion reign.

There was a station with "AI" and starting with "K" I just could not copy.
Asking for relays (QNB) was futile.

Whoever that station is, please reply to me.

The power went out just as the net began (windy here).
I switched over to standby power (batteries) and did the net in this
fashion.
Gee, that was fun! (at first it wasn't).

See you Wednesday night on 40 meters again.

Thanks for the head's up, Karl. Had not made it that far in the issue yet but ran down to the shack to check it out. I also have the Alpha PA70-V that W9IVG purchased with the CX-7.The amp is in regular use here too but with the Orion which interfaces to it directly due to Orion's capabilities.

That station in question was on the noise level. Very difficult copy. I was hoping someone wud relay.

The rain storm brought heavy winds and we lost per for maybe an hour.
The timing was perfect as I just started the net.
The Batts wrk well so I continue on that. It was fun cause the house was dark except the station.

See you Wednesday.

I found the QST article especially interesting as I had just taken delivery of a very nice Alpha 76PA that previous Monday. This could be my last amp. Too bad it wasn't my first but live and learn. Great machines!

I'll be running it with the Jupiter on Wednesday's 20m SSB net.

I guess we can now really appreciate the merging of Ten Tec and RF Products (Alpha to us old timers, HI!). Ten Tec built some mighty fine amps as well as their great radios but with both names now under the same roof what could be better? Any word yet on who will handle the servicing of the Ten Tec amps? Will that shift to RFP so they don't have to maintain two sets of power amp inventories/suppliers, etc.?

Hi Ron; Here, I use a small Honda 2000i, 2kw generator to run the basics in my house when we loose power.  It supplies what I need here in an emergency through a 4 circuit manual transfer switch.  This generator is extremely quiet for my subdivision, sips fuel, and easy to start.  I don't use it to power my HF amplifier, however, just the basic station along with 4 circuits in the house.  73, de Karl, KO8S

I have looked into that and for the price it is quite reasonable.
One year a fellow ham brought his to FD and I was sold. (smile)
I use solar panels to charge and top off my 30 AH batt.
It was enough to keep the station running and several LED lamps.
One thing for sure about these setups is that it keeps you honest
limiting RF to 100 watts.

See you tonight

Hello,

I noticed in the check-in database there are 3 check-ins listed under K4IED. Those should have been listed under KE4IED.

Also, my call has changed recently. The new call is N3IED.

Just FYI, I have another application pending with the FCC, so it might change again in the next week or so. I promise it won't change for a while after that, at least not until I'm an Extra. ;)

73, Ed

Hi all,
Conditions were strange with noise sounding like surf crashing on the beach, up and down like a Jo-Jo hi... hi. We managed to get 37 stations checked in. There was a VERY weak mobile with suffix SS. We could not pull him in with numerous calls sorry about that. We hope that Andy W3LI gets his Orion-2 operational soon. We missed you buddy.
Thank you Ted N8TJE who is a relay station and he keeps the frequency busy before I start the net. Thanks Ted. Maybe we will hear some of you on the CW net tonite at 20:00 EST (01:00 UTC).
73, Tony VE3DWI.

Gang,

that was not a bad turnout considering the band conditions and the
weather in midwest USA.
Gee, I hope those folks out there are OK and safe.
Many thanks to Ray (KK4BE) for the relay.
Relays is what makes the net work. I try to get everyone into
the log. No matter how weak the signal, I'll try to stay with you till
we get
it logged.

Riley Hollingsworth to North Carolina Club: Amateur Enforcement "Very Much Alive"
Former FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH, HamRadioNow - Episode 174: Riley at a Radio Club http://arvideonews.com/hrn/HRN_Episode_0174.html the Forsyth Amateur Radio Club http://www.w4nc.com/ that the FCC is still active in the Amateur Radio enforcement arena, even though it's not always apparent. He spoke to the Winston-Salem, North Carolina, club on November 10.

HamRadioNow - Episode 174: Riley at a Radio Club
http://arvideonews.com/hrn/HRN_Episode_0174.html The HamRadioNow On-Line TV Show featuring KN4AQ. Video for and about Amateur Radio (Ham Radio)

View on arvideonews.com http://arvideonews.com/hrn/HRN_Episode_0174.html
Preview by Yahoo

"You may not think so, but enforcement is very much alive," said Hollingsworth, who -- although retired -- still keeps up with goings on at the FCC and with the enforcement activities of his successor, FCC Special Counsel Laura Smith. "You just don't hear a lot about it, as you used to," he said, because ham radio news media report only the "big announcements" these days. During his tenure, Hollingsworth routinely released preliminary letters of inquiry and warning notices to radio amateurs suspected of breaking the rules. Now, he said, the FCC is using "the IRS model" of releasing information, partly in response to privacy considerations. "You only see final actions [now]," he said. "So, you don't think a lot's being done, but it's all behind the scenes, and you don't know about it." What is not helpful, he told the club members, is e-mailing or writing Laura Smith or the FCC proper to demand Commission attention to particular enforcement issues. Hollingsworth said the FCC has received "nasty e-mails to FCC personnel" concerning suspected ham radio rule breaking. Riley Hollingsworth, K4ZDH, addresses members of the Forsyth Amateur Radio Club in Winston-Salem, North Carolina. [Courtesy of HamRadioNow]
"I'm talking about horrible e-mails, threatening e-mails, threatening to the degree that the security office sometimes gets involved," he said. "We've got to stop this." Hiding behind the anonymity of the Internet, he stressed, gives some within the FCC a bad impression of ham radio and could prove counterproductive. In remarks now familiar to many who have heard him speak at Dayton Hamvention and elsewhere, Hollingsworth also warned his audience members against getting into on-the-air spats with rude or careless operators. "Don't engage people, and don't humor the idiots," he said. "Stupidity can't be regulated, no matter how good the rules are. Just turn the big knob. Every rig has one."
Hollingsworth's complete talk appears as Episode 174
http://arvideonews.com/hrn/HRN_Episode_0174.html of the online Amateur Radio television series HamRadioNow http://www.hamradionow.tv/, produced by Gary Pearce, KN4AQ. Read more h

As some of you may know I am a songwriter and have some good news. WBCQ 7.490 will be airing one of my songs tonight on the Fred Flintstone Radio Show at about 6pm CST. WBCQ has one the best sounding SW transmitters in the US.

Here is a link to the song:

Hello Andy,
Yes first I record my lead vocal then I go back and record each of my vocal harmony parts separately. I also played every instrument on the song. And of course I Recorded, Mixed & Mastererd everything myself from start to finish.

Looking forward to listening tonight because like I said WBCQ has really good audio.

Expedition 42 Soyuz Rocket Rolls Out

The Soyuz TMA-15M spacecraft is rolled out to the launch pad by train on Friday, Nov. 21, 2014 at the Baikonur Cosmodrome in Kazakhstan. Launch of the Soyuz rocket is scheduled for Nov. 24 and will carry Expedition 42 Soyuz Commander Anton Shkaplerov of the Russian Federal Space Agency (Roscosmos), Flight Engineer Terry Virts of NASA , and Flight Engineer Samantha Cristoforetti of the European Space Agency into orbit to begin their five and a half month mission on the International Space Station.

Swift Gamma-Ray Burst Mission Marks Ten Years of Discovery

On Nov. 20, 2004, NASA's Swift spacecraft lifted off aboard a Boeing Delta II rocket from Cape Canaveral Air Force Station, Fla., beginning its mission to study gamma-ray bursts and identify their origins. Gamma-ray bursts are the most luminous explosions in the cosmos. Most are thought to be triggered when the core of a massive star runs out of nuclear fuel, collapses under its own weight, and forms a black hole. The black hole then drives jets of particles that drill all the way through the collapsing star and erupt into space at nearly the speed of light.
Astronomers at NASA and Pennsylvania State University used Swift to create the most detailed ultraviolet light surveys ever of the Large and Small Magellanic Clouds, the two closest major galaxies. Nearly a million ultraviolet sources appear in this mosaic of the Large Magellanic Cloud, which was assembled from 2,200 images taken by Swift's Ultraviolet/Optical Telescope (UVOT) and released on June 3, 2013 http://www.nasa.gov/mission_pages/swift/bursts/magellanic-uv.html. The 160-megapixel image required a cumulative exposure of 5.4 days. The image includes light from 1,600 to 3,300 angstroms -- UV wavelengths largely blocked by Earth's atmosphere -- and has an angular resolution of 2.5 arcseconds at full size. The Large Magellanic Cloud is about 14,000 light-years across.
Viewing in the ultraviolet allows astronomers to suppress the light of normal stars like the sun, which are not very bright at such higher energies, and provides a clearer picture of the hottest stars and star-formation regions. No telescope other than UVOT can produce such high-resolution wide-field multicolor surveys in the ultraviolet.
Pennsylvania State University manages the Swift Mission Operations Center, which controls Swift's science and flight operations. Goddard manages Swift, which was launched in November 2004. The satellite is operated in collaboration with Penn State, the Los Alamos National Laboratory in New Mexico and Orbital Sciences Corp. in Dulles, Va. International collaborators are in the United Kingdom and Italy, and the mission includes contributions from Germany and Japan.

Ten Tec SSB Net - LIVE Audio Feed from Nashville, TN.
Direct link to Audio feed: http://www.qrz.com/db/KC2QMA http://www.qrz.com/db/KC2QMA

This audio feed will be available every Sunday from Nashville TN starting at (19:00 UTC 40M 7.263) & (20:00 UTC 20M 14.325).*Schedule & conditions permitting.
Go to the Link above and click on the play button in the video window and after a short advertisement the audio will begin to play. Some delay of the audio due to internet latency is normal.
(My station in Nashville is a Ten Tec Orion II - Wire dipole @75ft flat top)
During poor band conditions the receiver of the Ten Tec Orion II will be adjusted for best intelligible signal and may have reduced bandwidth and employ some DSP noise reduction.
Hope you enjoy and thanks for supporting the Ten Tec SSB NET!

Hi John,
I find that when I listen to shortwave stations, HF aeronautical band which will test how well you hear,
maritime band, etc It is nice to have great sound coming from my TEN-TEC's.

I am off this next week and will be enjoying SWL'ing and working DX and the TEN-TEC Nets.
When you spend hours listening you really do enjoy a fine receiver with nice audio.

If your using a little squeak box you just won't listen very long because of the extra noise and a
bad sounding sound speaker.
Now wouldn't it be nice if I heard KC2QMA New song on BBC, RCI, VOA, etc.
73,
Lloyd N2KPC

Hi Lloyd,

Thought I made the cut today around 1809 UCT on 28.440, maybe not? It was a no-go for me on all the other bands.

Thank's John for checking into the Maine Potatoe Net on 3958 to NJ at 7:00pm.
KC2QMA, John has made the trip as well from TN. Both with good signals.
The 75 Meter band works well from TN to the North East and everybody heard you fine.
I will be testing the s9 antennas this week at the W2ZQ Shack in NJ .
The V-18 foot vertical 6-20 MHZ, V-31, 6-40 MHz and the V-43, 6-80 MHz.
The S9 V-31 is up now.

73,
Lloyd N2KPC

Hi John,
Great song and crafty composition. In my younger days, in Holland, I played lead guitar in a rock band and, on the more classical side, played French Horn in an orchestra .
Loved the orchestra but dropped it all when immigrating to Canada.☐ Tried to listen to WBCQ 7.490 but a strong station on around 7.493 over powered it. I may have been on the wrong time though. Keep up the good work.
73, Tony VE3DWI

?

As some of you may know I am a songwriter and have some good news. WBCQ 7.490 will be airing one of my songs tonight on the Fred Flintstone Radio Show at about 6pm CST. WBCQ has one the best sounding SW transmitters in the US.

Here is a link to the song:

Ron,

Like Andy, W3LI, Now I'm also confused.

Sometime back you sent a definition for "exchange format" but it seems to me it has not often been followed and a free format has ensued.

Maybe it's time you again define the exchange format you would have us follow.

Also I suggest you include the preferred exchange format in the weekly Net reminder e-mailings.

Thanks for running the Net.

73,
Sonny, KD4AR

As an experienced CW NCS I don't see any beef here. Yes, NCS does like a certain Protocol, as it makes the flow of writing down the Check-ins (info) a bit smoother.
However, you will _never_ get a streamline or adherence to said protocol. It will never happen.

To me its no big deal what the cadence is.
That said, I ask, what is the pertinent value to the Stations wanting to check-in anyway.

On another note, while speaking of Protocol (I certainly mean no disrespect to Ron) but his Net Procedures are a bit unorthodox.
Up to now I have never mentioned this, as Ron is the man running the show and NCS is always in control.

I'm guilty myself, sometimes my paddles take over, I lose control, hence it doesn't conspire to Ron's forte.

In any event ALL, should try and follow Ron's requested protocol.

Changing gears here, I respectively, should have not Posted this response. See below.
None the less;

QTC 1 Ten Tec Nets

QRV ?

As you may or may have not noticed that I have not been checking into the Nets
With 249 check-ins, I have lost interest in the Ten Tec Nets. And yes there are some underlying
issues as well , but I won't go there or discuss it.

Yes, I may Check-in every once in a while, who knows.

I've made a lot of new friends here and its been a treat to meet those of you that I've conversed with.

We'll meet again down the Log. Until then, Happy Holidays and Good Health to you and your Families

Roger / KI8DU

Hi all,
In defense of Ron, I don't think he is too concerned about in what ☐order you send your info to him. I think he is more referring to the response to his QRN. He is asking to only send the last two once.
Some stations send their last two 2 or more times in succession and some are really fast. Some check in out of order as a station is being requested to send their info.☐ There are times that Ron calls in a station, who was acknowledged before, and he gets no response. I acknowledge the fact that conditions change but it must be frustrating for Ron too.
One more thing, is everyone who checks in a member of the group and gets Ron's, and others' emails? This could create some confusion too. Just my 2 pennies worth.

Hi all,

It's been a good net regardless of shifting conditions with VERY DEEP QSB at times. Thank you Ted N8TJE for relaying stations and John KC2QMA for streaming the audio live on the internet. We had various new check-ins and the highlight was a check-in from Ed KD2ADC with a "Soft Rock Ensamble".

I don't know how much power Ed was running but it could not have been very much. Between Ted N8TJE, John KC2QMA and myself it must have taken us at least ten repeats before we had all the information. As usual it was a blast. Thank you all for checking in and Y'all have a great, safe and Blessed Thanks Giving.

Actually he built a boat, enabling them to escape from the island.
They made it back home, had a hero’s welcome . . .
Then things didn’t work out so well.

Subject: [ten_tec_radio_net] Wed. Nov 26 Ten-Tec 20 mtr Net results

Hi all,

It's been a good net regardless of shifting conditions with VERY DEEP QSB at times. Thank you Ted N8TJE for relaying stations and John KC2QMA for streaming the audio live on the internet. We had various new check-ins and the highlight was a check-in from Ed KD2ADC with a "Soft Rock Ensamble".

I don't know how much power Ed was running but it could not have been very much. Between Ted N8TJE, John KC2QMA and myself it must have taken us at least ten repeats before we had all the information. As usual it was a blast. Thank you all for checking in and Y'all have a great, safe and Blessed Thanks Giving.

73, Tony VE3DWI.

Hi George ,
Congratulations on your 300'th checkins and the positive support to the TENTEC Nets and the TENTEC Family.
Always giving it your best shot even when Propagation is not so hot because a little bit adds up to a lot.
So that makes George the third the King of South New Jersey with honor well deserved.
So you know it coming so hear it is.
Thank You King George the third of Jersey who's RF reaches far and wide to the TEN-TEC Nets every
chance he gets for your dedication to us all.
Thank You George for a job well done.

November 12, 2014

Hello, Mr. Keillor, In the monologue last week from Duluth, you made reference to the famed "Prairie Queen" passenger train to Duluth. As an amateur railroad historian, I would like to know: did such a train exist, or is it a product of your imagination?

November 21, 2014

Listened to the show Saturday and it was not bad. Felt pretty dang cozy in the house, with all the snow that came down last week. Happened fast, didn't it. One day we're walkin' in the park wearing light jackets and tennis shoes, and a few days later — Boom...

SFI-180 A-5 K-1 10 Meter should be great.

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 40 meter CW net starts each Wednesday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity

NJ-18, CA-4, LA-4, AZ-3, PA-3, TX-3, CN-3, KS-2, CO-2, MI-2, NC-1, MA-1, PR-1, 1, SOUTH AFRICA-1.

We had ZS6SKY, STEVE from SOUTH AFRICA called in and I asked him about ZS6AI, Mike who I worked on the SpringBok 10X10 Chapter of South Africa back in the 1990's and to my surprise Steve who lives about
one mile from Mike and went to his house yesterday to help him put up a tower!!!!!
KP3A ASDRUBAL checked in for the third time from Puerto Rico too. . And lets not forget our Bothers and Sisters from Canada VE3JWH, John, VE3MXT, Marianne, and VE3DWI, Tony who always support the TEN-TEC Family too.

And last but not least, W3LI, Andy who is there for the duration of the TEN-TEC Nets and is my right hand Man. Thank You once again Andy for making it happen yet again and all of your hard work and time to the TEN-TEC Nets and me.

Don't forget WB1HGA, Ron NCS for the TEN-TEC CW Net Monday night.

73,
Lloyd N2KPC TEN-TEC 10 Meter SSB Net Control Station .-.-.-

# 3802. CW Monday and Wednesday nets reminder

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-01 17:04:39 UTC
From: ron
Topic: 3802  Message: 3802

REVIEW

The Ten Tec CW net is a slow (any speed up to 13 wpm) speed net. Our mission statement is to create cw activity to encourage young and old, experience and newcomer learn the language of Morse code.

We meet on Monday night and Wednesday night at 8.00 PM Eastern time (0100 GMT)

on 7063.

The NCS (net control station) calls out QNI? At this time you ck in with the last 2 letters of your call.

PLEASE try to space your call to prevent doubling. I cannot ck you in if you and 3 other people sign in at same time.

I will build a small list. Then call from that list. When the list is depleted, I again call QNI?.

If you did not get on first list, please be assured I will call QNI again.

PROTOCOL

Send: CALL NAME STATE (only) RADIO RST

It would be nice if you send in that order.

RELAYS

This works two ways.

I may call for QNB (relay) or someone can ask for QNB (relay).

To send relay to NCS, send: QNB de WW!XXX

I will reply QNB ww1XXX K. You then proceed to gather info.

When complete, again send QNB de WW1XXX

I will reply WW1XXX K.

Our goal is to ck in everyone will can.Please try to zero beat with my signal

CU there!

Ron wb1hga

NASA's Orion Spacecraft at the Launch Pad

With access doors at Space Launch Complex 37 opened on Nov. 24, 2014, the Orion spacecraft and Delta IV Heavy stack is visible in its entirety inside the Mobile Service Tower where the vehicle is undergoing launch preparations. Orion will make its first flight test on Dec. 4 with a morning launch atop the United Launch Alliance Delta IV Heavy rocket. Orion’s crew module is underneath the Launch Abort System and nose fairing, both of which will jettison about six minutes, 20 seconds after launch. The tower will be rolled away from the rocket and spacecraft 8 hours, 15 minutes before launch to allow the rocket to be fueled and for other launch operations to proceed.
The spacecraft will orbit the Earth twice, including one loop that will reach 3,600 miles above Earth. No one will be aboard Orion for this flight test, but the spacecraft is being designed and built to carry astronauts on exploration missions into deep space. Launch is scheduled for Thursday, Dec. 4 at 7:05 a.m. EST, the opening of a 2 hour, 39-minute window for the day.

Hi Ron,

It's not that important but I thought that Mark N8ME reported using a Flex 300 or 3000.

73, Tony VE3DWI.

Sent from my BlackBerry 10 smartphone on the Bell network.

NASA's Journey to Mars

NASA is developing the capabilities needed to send humans to an asteroid by 2025 and Mars in the 2030s – goals outlined in the bipartisan NASA Authorization Act of 2010 and in the U.S. National Space Policy, also issued in 2010.
Mars is a rich destination for scientific discovery and robotic and human exploration as we expand our presence into the solar system. Its formation and evolution are comparable to Earth, helping us learn more about our own planet’s history and future. Mars had conditions suitable for life in its past. Future exploration could uncover evidence of life, answering one of the fundamental mysteries of the cosmos: Does life exist beyond Earth?
While robotic explorers have studied Mars for more than 40 years, NASA’s path for the human exploration of Mars begins in low-Earth orbit aboard the International Space Station. Astronauts on the orbiting laboratory are helping us prove many of the technologies and communications systems needed for human missions to deep space, including Mars. The space station also advances our understanding of how the body changes in space and how to protect astronaut health.
Our next step is deep space, where NASA will send a robotic mission to capture and redirect an asteroid to orbit the moon. Astronauts aboard the Orion spacecraft will explore the asteroid in the 2020s, returning to Earth with samples. This experience in human spaceflight beyond low-Earth orbit will help NASA test new systems and capabilities, such as Solar Electric Propulsion, which we’ll need to send cargo as part of human missions to Mars. Beginning in FY 2018, NASA’s powerful Space Launch System rocket will enable these “proving ground” missions to test new capabilities. Human missions to Mars will rely on Orion and an evolved version of SLS that will be the most powerful launch vehicle ever flown.
A fleet of robotic spacecraft and rovers already are on and around Mars, dramatically increasing our knowledge about the Red Planet and paving the way for future human

explorers. The Mars Science Laboratory Curiosity rover measured radiation on the way to Mars and is sending back radiation data from the surface. This data will help us plan how to protect the astronauts who will explore Mars. Future missions like the Mars 2020 rover, seeking signs of past life, also will demonstrate new technologies that could help astronauts survive on Mars.
Engineers and scientists around the country are working hard to develop the technologies astronauts will use to one day live and work on Mars, and safely return home from the next giant leap for humanity. NASA also is a leader in a Global Exploration Roadmap, working with international partners and the U.S. commercial space industry on a coordinated expansion of human presence into the solar system, with human missions to the surface of Mars as the driving goal. Follow our progress at www.nasa.gov/exploration http://www.nasa.gov/exploration and www.nasa.gov/mars http://www.nasa.gov/mars.

# 3818. December, More meteor showers and planets

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-02 22:33:00 UTC
From: n2kpc@...
Topic: 3818  Message: 3818

December 2, 2014

What's Up for December 2014

› View Now http://www.nasa.gov/sites/default/files/whatsup20141201-320.mp4

What's Up for December. More meteor showers and plenty of planets.
Hello and welcome. I'm Jane Houston Jones from NASA's Jet Propulsion Laboratory in Pasadena, California.
If the weather marred your meteor watching in November, don't worry. The December Geminids and Ursids offer up two more chances to see meteor showers this year. The constellation Gemini, namesake of the Geminids and location of the meteor shower radiant, is easy to spot above Orion, high in the southern sky. Look for the most Geminids--even before midnight--on the peak nights of December 13-14th and 14th-15th.
A week later, under darker new moon conditions, look for the Ursids radiating from the bowl of Ursa Minor, or the Little Dipper. The best time to view this shower is from after midnight until dawn on December 22nd and 23rd.
Start the month with a pretty view of the moon near the Pleiades star cluster on December 4th and 5th. Look east a few hours after sunset. You can't miss the two objects. Then, set your alarm clock for an hour before sunrise and catch Jupiter above the moon on December 11th through the 13th in the southwest sky. Jupiter rises in the Eastern sky by about 10 p.m. and it's visible until dawn.
From the 18th to the 20th, look southeast a little closer to sunrise to catch the slender crescent moon near Saturn.
Three more planets grace the evening sky. Venus is below the moon, near the horizon, on the 23rd. Mars is below the moon on the 25th. And Mercury peeks over the horizon on New Year's Eve.
Uranus and Neptune are among the stars of the constellations Aquarius and Pisces in the southern sky. You'll need a telescope to spot Neptune, but you just might find blue-green Uranus through binoculars as soon as it's dark after sunset.
Finally, there are two comets to try for through telescopes. Comet Siding Spring in Ophiucus and Comet PanSTARRS in Sculptor. Try looking in the early evening. Both are low on the western horizon.
You can learn more about all the solar system bodies at solarsystem.nasa. gov. And you can learn about all of NASA's missions at www. nasa. gov.
That's all for this month. I'm Jane Houston Jones.
73,
Lloyd N2KPC PR

NASA's Orion Spacecraft Prepared for Launch

NASA’s Orion spacecraft, mounted atop a United Launch Alliance Delta IV Heavy rocket, is visible inside the Mobile Service Tower where the vehicle is undergoing launch preparations, Wednesday, Dec. 3, 2014, Cape Canaveral Air Force Station's Space Launch Complex 37, Florida. Orion is NASA’s new spacecraft built to carry humans, designed to allow us to journey to destinations never before visited by humans, including an asteroid and Mars.

Hi all,
We had a good net with 43 stations checking in. The highlight for me was the last station ZS6CS from South Africa who also came from the Netherlands (Holland). It turned out we had lived less then 6 miles from each other and we had a common friend in Southern Ontario. We even ended up speaking Dutch hi... hi. Just goes to show you that Ham Radio is full of surprises. Please check the list for wrong entries.

73, Tony VE3DWI.

John, Tnx for the additional info on using the PBT and the A>B knobs as buttons. U should rewrite the manual, Hi Hi.
Andy, W3LI

# 3829. WOW 42 New Checkins 2 the TENTEC NETS 317 Total

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-05 05:00:51 UTC
From: n2kpc@...
Topic: 3829  Message: 3829

That's a great thing for the TEN-TEC Family.
A little adds up to a lot. One at a time. Thank You.
Two New Records, 42 New future TENTEC folks and 317 total checkins.
I talked to three Hams today on two meters on the local repeater and they will be joining us this Sunday
for the first time on the TENTEC Nets.
So keep spreading the word because its working.
73,
Lloyd N2KPC PR

# 3830. land a small probe plus three mini rovers on a asteroid

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-05 05:19:09 UTC
From: n2kpc@...
Topic: 3830  Message: 3830

Dec. 4, 2014: On Dec. 3, the Japan Aerospace Exploration Agency (JAXA) successfully launched its Hayabusa2 mission to rendezvous with an asteroid, land a small probe plus three mini rovers on its surface, and then return samples to Earth. NASA and JAXA are cooperating on the science of the mission and NASA will receive a portion of the Hayabusa2 sample in exchange for providing Deep Space Network communications and navigation support for the mission.

Preview by Yahoo

Asteroid Explorer “Hayabusa2” is a successor of “Hayabusa” (MUSES-C), which revealed several new technologies and returned to Earth in June 2010. Image Credit: JAXA and Akihiro Ikeshita

Hayabusa2 builds on lessons learned from JAXA’s initial Hayabusa mission, which collected samples from a small asteroid named Itokawa and returned them to Earth in June 2010. Hayabusa2’s target is a 750 meter-wide asteroid named 1999 JU3, because of the year when it was discovered by the NASA-sponsored Lincoln Near-Earth Asteroid Research project, Lexington, Massachusetts. This is a C-type asteroid which are thought to contain more organic material than other asteroids. Scientists hope to better understand how the solar system evolved by studying samples from these asteroids.

“We think of C-type asteroids as being less altered than others,” says Lucy McFadden, a planetary scientist at NASA’s Goddard Space Flight Center in Greenbelt, Maryland. “Bringing that material back and being able to look at it in the lab — I think it’s going to be very exciting.”

http://science.nasa.gov/mailing-lists/subscribe/

On Nov. 17, NASA and JAXA signed a Memorandum of Understanding for cooperation on the Hayabusa2 mission and NASA’s Origins, Spectral Interpretation, Resource Identification, Security – Regolith Explorer (OSIRIS-REx) mission to mutually maximize their missions’ results. OSIRIS-REx is scheduled to launch in 2016. It will be the first U.S. asteroid sample return mission. OSIRIS-REx will rendezvous with the 500-meter-sized asteroid Bennu in 2019 for detailed reconnaissance and a return of samples to Earth in 2023.

Hayabusa2 and OSIRIS-REx will further strengthen the two space agencies’ relationship in asteroid exploration.

The missions will also help NASA choose its target for the first-ever mission to capture and redirect an asteroid. NASA's Asteroid Redirect Mission (ARM) in the 2020s will help NASA test new technologies needed for future human missions for the Journey to Mars.

Comets and asteroids contain material that formed in a disk surrounding our infant sun. The hundreds of thousands of known asteroids are leftovers from material that didn't coalesce into a planet or moon in the inner solar system. The thousands of known comets likely formed in the outer solar system, far from the sun's heat, where water exists as ice.

Larger objects like dwarf planets Pluto and Ceres also formed in the outer solar system, where water ice is stable. Pluto and Ceres will soon be explored by NASA missions New Horizons and Dawn, respectively. Asteroids and comets are of unique interest to scientists, though, because they could hold clues to the origins of life on Earth.

These missions have greatly increased scientific knowledge on Earth about our solar system and the history of our planet. Many scientists suspect we could find organic material in asteroids and comets, like amino acids—critical building blocks for life, which could help answer questions about the origins of life on Earth. These questions drive us to continue exploring the intriguing asteroids and comets of our solar system.

Multiple missions that are operating in space or in development by NASA and international partners could bring us much closer to answering that question in our lifetimes and also help identify Near-Earth Objects that might pose a risk of Earth impact, and further help inform developing options for planetary defense.

December 4, 2014

MEDIA ADVISORY M14-197

Orion Flight Test, NASA TV Coverage Reset for Friday, Dec. 5

http://www.nasa.gov/sites/default/files/m14-197a_0.jpg

A United Launch Alliance Delta IV Heavy rocket with NASA’s Orion spacecraft mounted atop is seen after the Mobile Service Tower was finished rolling back early on Thursday, Dec. 4, at Cape Canaveral Air Force Station's Space Launch Complex 37 in Florida. Orion is scheduled to make its first flight test Friday, Dec. 5.

Image Credit:
NASA/Bill Ingalls

The first flight test of Orion, NASA’s next-generation spacecraft capable of sending astronauts on future missions to an asteroid and the journey to Mars, now is scheduled to launch Friday, Dec. 5 at 7:05 a.m. EST, atop a United Launch Alliance Delta IV Heavy from Cape Canaveral Air Force Station in Florida. NASA Television coverage will begin at 6 a.m. There is a two-hour, 39-minute window for the launch.
A Thursday launch attempt was scrubbed due to valve issues that could not be remedied before the launch window closed. Several valves are used to fill and drain the first stage of the rocket with propellant prior to liftoff.
NASA TV commentary of the flight will continue through splashdown, approximately 4.5 hours later in the Pacific Ocean about 600 miles southwest of San Diego. A post-flight test news conference will be held Friday approximately two hours after splashdown.
During its trip, designated Exploration Flight Test-1, Orion will orbit Earth twice and travel to a distance of 3,600 miles into space. The flight is designed to test many of the most vital elements for human spaceflight and will provide critical data needed to improve Orion’s design and reduce risks to future mission crews.
For the latest information on news conferences and coverage times, visit:
http://www.nasa.gov/ntvnews http://www.nasa.gov/ntvnews
For more information about Orion’s flight test, visit:

Mobile Service Tower Rolled Back for Orion Flight Test

A United Launch Alliance Delta IV Heavy rocket with NASA’s Orion spacecraft mounted atop is seen after the Mobile Service Tower was finished rolling back early on Thursday, Dec. 4, 2014, at Cape Canaveral Air Force Station's Space Launch Complex 37, Florida.
The next launch opportunity for the Orion flight test is 7:05 a.m. EST on Friday, Dec. 5. The spacecraft will orbit Earth twice, reaching an altitude of approximately 3,600 miles above Earth before landing in the Pacific Ocean. No one will be aboard Orion for this flight test, but the spacecraft is designed to allow us to journey to destinations never before visited by humans, including an asteroid and Mars.
Photo Credit: NASA/Bill Ingalls

If it doesn't go right it will be the biggest fireworks you ever saw.
Let's hope not.

Editor: Klaus Poels, DL7UXG
(e-mail: dxnl@dxhf.darc.de mailto:dxnl@dxhf.darc.de)

C6, Bahamas:
John, 9H5G (KK4OYJ) will be active from the Bahamas until late April 2015. Currently he's on South Bimini (NA-048) but activities from NA-001, NA-113 and NA-054 are also planned. QSL via NI5DX (d), LoTW, ClubLog OQRS. http://kk4oyj.wordpress.com/ http://kk4oyj.wordpress.com/

CE9, Antarctica:
Paolo, IZ2QEJ is staying on Concordia Base (AA MN-06, WAP MNB-03, IOTA AN-016, ANFF-006) until Feburary 2015. During his free time, he will try to get on the air as IA/IZ2QEJ on the HF bands.
QSL via IZ2QEJ (d) after his return.

F, France:
The special callsign TM55BM will be active to remember the 55th anniversary of the dam failure at Malpasset until December 6.
Operators include Paul/F2YT, Damien/F4ASQ, Pierre-Marie/F4FCE, David/ F4GQP, Lawrence/F4GVK, Jim/ F5MCC, Patrick/F5MQW, Lydia/F5MSS, Robert/ F5RHD and Michael/F8GGZ. QSL via F4FCE (d/B).
http://www.tm55bm.hamradio- station.fr/index.html
http://www.tm55bm.hamradio-station.fr/index.html

J6, Saint Lucia:
Bengt, SM7EQL and Ronnie, SM7DKF are on vacation on St. Lucia Island (NA-108, WLOTA 1336) from December 7 through 15 and operate as J6/homecall on the highbands. QSL for J6/SM7EQL via SM6JSM, J6/SM7DKF via SM7DKF. http://www.sm7dkf.se/ http://www.sm7dkf.se/

Members of the "The Buddies in the Caribbean DXpedition group" will also be QRV from St. Lucia Island.

JD1, Ogasawara:
Freddy, F4HEC received the callsign JD1BOX and will be QRV from Chichi-jima (AS-031, WLOTA 2269, JAFF-018, JCG 10007, WW Loc. QL17cc) on the HF bands from December 4 to 12. QSL via F4HEC (d/B).

T8, Palau:
Kaoro, JH7WER will operate as T88ER from December 3 to 6 from Koror Island (OC-009) on HF and 6m, mostly on CW. QSL via JH7WER (d/B).

Hiro/JA7DAJ is QRV as T88FC at the same time, working on SSB. QSL via JA7DAJ (d/B).

VP8, Falkland Islands:
Members of the Royal Air Force ARS will activate the special calls VP8RAF/100 and VP8FIR/100 on the occasion of the 100th anniversary of the "Battle of Coronel". QSL for VP8RAF/100 via G8FC (d). http://www.rafars.org/ http://www.rafars.org/

VQ9, Chagos Island:
Robert, N7XQ will operate as VQ9XR from Chagos (AF-006, WW Loc. MI62eq) on all HF bands (CW/SSB/RTTY) until December 19. QSL via N7XR (d).

W, USA:
W1AW will be active during the upcoming week /1 from Maine (ME) and /9 from Illinois (IL). http://www.arrl.org/ centennial-qso-party http://www.arrl.org/centennial-qso-party https://centennial-qp.arrl. org/w1aw-portable-qsos.php https://centennial-qp.arrl.org/w1aw-portable-qsos.php

T30D report:
An article about the recent T30D DXpedition can be downloaded from the website of the German DX Foundation (in German language): http://gdxf.de/download/T30D_ 2014.pdf http://gdxf.de/download/T30D_2014.pdf

Lord Howe Island - VK9DLX:
QSLs for VK9DLX are being printed as your read this. First cards to be sent out in January 2015.
QSL requests via OQRS. http://oqrs.lagunaria-dx- group.org/ http://oqrs.lagunaria-dx-group.org/

FT4TA - Tromelin Island:
A photo gallery of the recent FT4TA DXpedition is now available in their website:
http://www.tromelin2014.com/ en/news/photos-of-tromelin- 2014-ft4ta/

http://www.tromelin2014.com/en/news/photos-of-tromelin-2014-ft4ta/

IOTA Compiled by Friedrich, DL4BBH (iota@dxhf.darc.de mailto:iota@dxhf.darc.de)
====

IOTA QRGs
CW: 28040 24920 21040 18098 14040 10114 7030 3530 kHz
SSB: 28560 28460 24950 21260 18128 14260 7055 3760 kHz

IOTA News:
IOTA manager G3KMA reports that contrary to previous announcements, Bjoern/OX5T and Mia/OX5M are *not* operating from NA-220.
Due to its proximity to the main island, Qarqortoq counts as NA-018 (Greenland).

AF-004; EA8, Canary Islands: Andrea/IK1PMR and Claudia/PA3LEO are once again QRV signing EA8/homecall from December 9 to January 8, on all HF bands (CW/SSB/RTTY). Direct QSL via HB9FKK, bureau QSL also via homecall. http://www.ik1pmr.com/ http://www.ik1pmr.com/

AS-013; 8Q, Maldive Islands: Francesco/IK0FUX is spending his vacation on Maayafushi Island from December 1 to 10 and plans to operate on the HF bands in holiday style as 8Q7UX. QSL via homecall (d/B), LoTW.

AF-045; 6W, Senegal North group: Members of the der "Association des Radioamateurs du Senegal" (ARAS) will sign 6V1A from Goree Island from December 5 to 7. QSL via QRZ.COM http://qrz.com/.

AS-064; R0X, Bering Sea Coast group: QSL manager Victor, UA3AKO reports that QSLs for the IOTA expedition RI0X have arrived from the printer and answering QSLs has now started.

EU-027; JW, Bear Island: Svein/LA9JKA will be on Bear Island for a work assignment until May 2015, starting December 6. In his free time he plans to operate on all HF bands and 6m. In the winter season his focus will be on 160m, in the spring on 6m.
QSL via LA9JKA only direkt.

EU-125; OZ, Jylland West group: Volker/DJ8VW will operate as 5P8VW from Romo (OZFF-004) on 160m-6m (CW/SSB/JT65) from December 6 - 20.
QSL via DJ8VW (d/B) LoTW, eQSL, OQRS.

OC-151; YB9, Tenggara Timur Islands: Correction for DXNL 1912:
We announced the activity of DL7UVO and DL3KZA as YB9/homecall with a wrong QSL information. QSL for YB9/DL3KZA via homecall DL3KZA (B), not via DL5KZA.

SA-070; CE5, Bio-Bio Region group: Members of the "Radio Club of Concepcion" plan to get on the air as XR5JA on December 6/7 from Quiriquina Island (WLOTA 0445, DICE ICE-501) on HF. QSL via CE5JA (d/B)

December 5, 2014

RELEASE 14-325

NASA’s New Orion Spacecraft Completes First Spaceflight Test

Major Milestone on Agency's Journey to Mars

http://www.nasa.gov/sites/default/files/14-325d_0.jpg

Following a perfect launch and more than four hours in Earth's orbit, NASA's Orion spacecraft is seen from an unpiloted aircraft descending under three massive red and white main parachutes and then shortly after its bullseye splashdown in the Pacific Ocean, 600 miles southwest of San Diego. During the uncrewed test, Orion traveled twice through the Van Allen belt, where it experienced periods of intense radiation, and reached an altitude of 3,600 miles above Earth. The spacecraft hit speeds of 20,000 mph and weathered temperatures approaching 4,000 degrees Fahrenheit as it entered Earth’s atmosphere.

Image Credit:
NASA

NASA marked a major milestone Friday on its journey to Mars as the Orion spacecraft completed its first voyage to space, traveling farther than any spacecraft designed for astronauts has been in more than 40 years.
“Today’s flight test of Orion is a huge step for NASA and a really critical part of our work to pioneer deep space on our Journey to Mars,” said NASA Administrator Charles Bolden. “The teams did a tremendous job putting Orion through its paces in the real environment it will endure as we push the boundary of human exploration in the coming years.”
http://www.nasa.gov/sites/default/files/14-325.jpg

The United Launch Alliance Delta IV Heavy rocket with NASA’s Orion spacecraft mounted atop, lifts off from Cape Canaveral Air Force Station's Space Launch Complex 37 at at 7:05 a.m. EST, Friday, Dec. 5, 2014, in Florida.

Image Credit:
NASA/Bill Ingalls

Orion blazed into the morning sky at 7:05 a.m. EST, lifting off from Space Launch Complex 37 at Cape Canaveral Air Force Station in Florida on a United Launch Alliance Delta IV

Heavy rocket. The Orion crew module splashed down approximately 4.5 hours later in the Pacific Ocean, 600 miles southwest of San Diego.
During the uncrewed test, Orion traveled twice through the Van Allen belt where it experienced high periods of radiation, and reached an altitude of 3,600 miles above Earth. Orion also hit speeds of 20,000 mph and weathered temperatures approaching 4,000 degrees Fahrenheit as it entered Earth’s atmosphere.
Orion will open the space between Earth and Mars for exploration by astronauts. This proving ground will be invaluable for testing capabilities future human Mars missions will need. The spacecraft was tested in space to allow engineers to collect critical data to evaluate its performance and improve its design. The flight tested Orion’s heat shield, avionics, parachutes, computers and key spacecraft separation events, exercising many of the systems critical to the safety of astronauts who will travel in Orion.
http://www.nasa.gov/sites/default/files/14-325e.jpg

NASA Administrator Charles Bolden and William Gerstenmaier, Associate Administrator for NASA's Human Exploration and Operations Directorate, and others in Building AE at Cape Canaveral Air Force Station in Florida monitor the Orion spacecraft as it returns to Earth and splashes down in the Pacific Ocean.

Image Credit:
NASA/Bill Ingalls

On future missions, Orion will launch on NASA’s Space Launch System (SLS) heavy-lift rocket currently being developed at the agency’s Marshall Space Flight Center in Huntsville, Alabama. A 70 metric-ton (77 ton) SLS will send Orion to a distant retrograde orbit around the moon on Exploration Mission-1 in the first test of the fully integrated Orion and SLS system.
“We really pushed Orion as much as we could to give us real data that we can use to improve Orion’s design going forward,” said Mark Geyer, Orion Program manager. “In the coming weeks and months we’ll be taking a look at that invaluable information and applying lessons learned to the next Orion spacecraft already in production for the first mission atop the Space Launch System rocket.”
A team of NASA, U.S. Navy and Lockheed Martin personnel aboard the USS Anchorage are in the process of recovering Orion and will return it to U.S. Naval Base San Diego in the coming days. Orion will then be delivered to NASA’s Kennedy Space Center in Florida, where it will be processed. The crew module will be refurbished for use in Ascent Abort-2 in 2018, a test of Orion’s launch abort system.
Lockheed Martin, NASA’s prime contractor for Orion, began manufacturing the Orion crew module in 2011 and delivered it in July 2012 to the Neil Armstrong Operations & Checkout Facility at Kennedy where final assembly, integration and testing were completed. More than 1,000 companies across the country manufactured or contributed elements to Orion.

Propagation Forecast Bulletin 49 ARLP049
From Tad Cook, K7RA
Seattle, WA December 5, 2014
To all radio amateurs

SB PROP ARL ARLP049
ARLP049 Propagation de K7RA

Average daily sunspot numbers rose substantially over the past week, from 97.4 in the previous seven days to 152 for the most recent. Average daily solar flux rose from 168.9 to 172.1.

Predicted solar flux is currently 150 on December 5 and 6, 145 on December 7, 140 on December 8 to 12, 180 on December 13 and 14, 185 on December 15 to 19, 170 on December 20 to 23, 175 on December 24 to 27, 180 on December 28 to 30, 170 on December 31 through January 1, then 165, 160, 170 and 175 on January 2 to 5, and 180 on January 6 to 10.

Predicted planetary A index is 5 on December 5 to 12, 20 on December 13, 10 on December 14 and 15, then 8, 10 and 12 on December 16 to 18, 10 on December 19 to 20, 8 on December 21, 5 on December 22 to 27, then 15 and 12 on December 28 and 29, 8 on December 30 and 31, and 5 on January 1 to 6.

Petr Kolman, OK1MGW sent us his latest geomagnetic stability forecast. This might be important for this weekend's ARRL 160 Meter Contest.

Petr says to expect mostly quiet conditions December 5, quiet to active December 6 and 7, quiet to unsettled December 8, mostly quiet December 9 and 10, quiet to unsettled December 11, quiet to active December 12 and 13, quiet to unsettled December 14 and 15, quiet to active December 16 and 17, quiet to unsettled December 18 to 20, mostly quiet December 21, quiet December 22, mostly quiet December 23 and 24, quiet on December 25 and 26, quiet to unsettled December 27 and 28, and mostly quiet December 29 to 31.

Petr also expects increased solar wind on December 5 to 7, 11 to 13 and 16 to 18.

Note that OK1MGW has quiet to active conditions December 6 and 7, the days for the 160 Meter Contest, but the NOAA USAF prediction says an A index of 5 (which is quiet) for all of December 5 to 12.

The Space Weather Prediction Center warns that although their websites will remain up, the data will be stale from 6:00 AM until

6:00 PM MST on Saturday, December 13 due to system maintenance.

In addition, on December 2 SWPC posted this information:

"SWPC is pleased to announce that it will be switching to our new website on December 9th. When the site change is implemented www.spaceweather.gov and www.swpc.noaa.gov will link to the new website that is currently in final beta release at origin-www.swpc.noaa.gov. SWPC's legacy website will be available to all users for a transition period of at least 60 days (with the exception of POES satellite products which will be discontinued December 31). The legacy website will be located at legacy-www.swpc.noaa.gov.

Please note that if you have bookmarks or automatic links to pages on the old website, these links will no longer work. Most of the content will be available on the new site under new links and we will work with customers who bring up specific content issues to ensure that their links are re- established on the new site.

Since April 2014, NOAA's Space Weather Prediction Center (SWPC) has sought feedback from stakeholders and customers via a survey on the beta release of the new website. We will continue to respond to feedback from stakeholders and customers regarding issues of content or behavior of the new site as we go through this transition to operational status.

For questions or feedback regarding this action, please use our feedback form:

http://origin-www.swpc.noaa.gov/content/contact-us
http://origin-www.swpc.noaa.gov/content/contact-us"

Now let us examine some recent averages and trends for daily sunspot numbers. The average for the month of October was 92.1 and it was 101.9 for November.

Our three month moving averages of daily sunspot numbers centered on January through October were 138.5, 146.4, 148.2, 129.6, 118.4, 112.8, 109.2, 115.6, 108.4 and 107. The reason it ended in October is because this is the month the average is centered on, so the number for October consists of all the data for September, October and November, and the number centered on September is all the data for August, September and October.

Ken Gordon, W7EKB of Moscow, Idaho sent in a suggestion for a propagation program he likes, which is a part of the free Airmail Pactor software package, which you can download from http://siriuscyber.net/ham/ http://siriuscyber.net/ham/. He likes it better than the W6ELprop
program, which is also free. I had a couple of confusing issues to work out to get it running, but Ken cleared things up.

Paging back through correspondence, I see that he also suggested it in June 2013, but I was slow to act on it.

It gives you a nice percentage rating on the viability of the path, and the resolution is in one degree steps.

You can enter the default geographic coordinates for your station, but you actually need to pre-program the coordinates for every location you want to target. Ken says to edit some system files which were not apparent when I hunted for them, but you can actually edit a station list by clicking View, Station List, then click on the Ham folder and click the New button. The simplest way I found to do this was get the grid square from WM7D.net for domestic call signs, and you can enter this and the program will calculate the geographic coordinates.

Then to calculate path reliability or signal strength (I think based on 100 watts and a dipole), click View, Propagation or hit F8 and your station list comes up, and the option to enter either solar flux or sunspot numbers. I just averaged solar flux for the past 3 days and used that.

Then in the top Frequency window I enter the frequency in KHz. Remember it is KHz, so the low end of 20 meters might be 14020, but never 14.02.

There is also a way to have a list of frequencies shown for each station, but I am not that far along with it to describe it here.

To run the calculation, just hit the update button over on the right.

The ARRL Ten Meter Contest is next weekend, December 13 and 14. Find details at http://www.arrl.org/10-meter http://www.arrl.org/10-meter.

Note this event runs from 0000 UTC Saturday through 2359 UTC on Sunday. For most of us the start of the contest will be late afternoon or early evening on Friday.

Fortunately the Geminid meteor shower should peak on December 14, so ten meter propagation may be aided by ionization from meteor trails. NASA has detected meteor fireballs beginning two weeks before the peak, according to Spaceweather.com.

Spaceweather.com also reported an M-6 class solar flare at 1825 UTC on December 4, and this caused a brief HF radio blackout in the Western Hemisphere. There was no CME. Forecasters estimate a forty-percent chance of additional M-flares over the next day or so.

We have all enjoyed the all-over real-time views of the sun at http://stereo.gsfc.nasa.gov/ http://stereo.gsfc.nasa.gov/. But Don Kalinowski, NJ2E of Cary,
North Carolina reports that contact with the STEREO B spacecraft has been lost.

an explanation of the
numbers used in this bulletin, see
http://arrl.org/the-sun-the-earth-the-ionosphere.
http://arrl.org/the-sun-the-earth-the-ionosphere.An archive of past
propagation bulletins is at
http://arrl.org/w1aw-bulletins-archive-propagation.
http://arrl.org/w1aw-bulletins-archive-propagation.More good
information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve
overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL
bulletins are at http://arrl.org/bulletins.

Sunspot numbers for November 27 through December 3 were 155, 166,
156, 153, 160, 146, and 128, with a mean of 152. 10.7 cm flux was
178.8, 181.4, 177.3, 177.3, 168.1, 167.7, and 154.2, with a mean of
172.1. Estimated planetary A indices were 8, 5, 5, 9, 10, 12, and 8,
with a mean of 8.1. Estimated mid-latitude A indices were 7, 5, 5,
6, 9, 9, and 7, with a mean of 6.9.

Launch of Orion

The United Launch Alliance Delta IV Heavy rocket, with NASA’s Orion spacecraft mounted atop, lifts off from Cape Canaveral Air Force Station's Space Launch Complex 37 at at 7:05 a.m. EST, Friday, Dec. 5, 2014, in Florida. The Orion spacecraft will orbit Earth twice, reaching an altitude of approximately 3,600 miles above Earth before landing in the Pacific Ocean. No one is aboard Orion for this flight test, but the spacecraft is designed to allow us to journey to destinations never before visited by humans, including an asteroid and Mars

Sedimentary Signs of a Martian Lakebed

This evenly layered rock photographed by the Mast Camera (Mastcam) on NASA's Curiosity Mars Rover shows a pattern typical of a lake-floor sedimentary deposit not far from where flowing water entered a lake.
The scene combines multiple frames taken with Mastcam's right-eye camera on Aug. 7, 2014, during the 712th Martian day, or sol, of Curiosity's work on Mars. It shows an outcrop at the edge of "Hidden Valley," seen from the valley floor. This view spans about 5 feet (1.5 meters) across in the foreground. The color has been approximately white-balanced to resemble how the scene would appear under daytime lighting conditions on Earth. Figure A is a version with a superimposed scale bar of 50 centimeters (about 20 inches).
This is an example of a thick-laminated, evenly-stratified rock type that forms stratigraphically beneath cross-bedded sandstones regarded as ancient river deposits. These rocks are interpreted to record sedimentation in a lake, as part of or in front of a delta, where plumes of river sediment settled out of the water column and onto the lake floor.
NASA's Jet Propulsion Laboratory, a division of the California Institute of Technology, Pasadena, manages the Mars Science Laboratory Project for NASA's Science Mission Directorate, Washington. JPL designed and built the project's Curiosity rover. Malin Space Science Systems, San Diego, built and operates the rover's Mastcam. For more information about Curiosity, visit http://www.nasa.gov/msl http://www.nasa.gov/msl and http://mars.jpl.nasa.gov/msl http://mars.jpl.nasa.gov/msl.

☐Hi all,
Just a reminder that the 20 mtr TenTec net will begin at 14:00 EST (19:00 UTC) ☐ on 14.325 MHz. +/-. ? Please zero beat net control.
If possible, John KC2QMA will stream the audio live on the I-net. ☐ Go to QRZ.com KC2QMA and follow his instructions.?
Ted N8TJE and Andy W3LI will likely be the relay stations.?
The temperature here dropped to -8 Fahrenheit (-22.3 Celsius). C?U all there.
73, Tony VE3DWI.

Great Lakes and Central U.S. Viewed From the International Space Station

From the International Space Station, Expedition 42 Commander Barry Wilmore took this photograph of the Great Lakes and central U.S. on Dec. 7, 2014, and posted it to social media.
This week on the station, the Expedition 42 crew has been busy with medical science and spacesuit work while preparing for the arrival of SpaceX's Dragon commercial cargo craft, scheduled to launch on Dec. 16 on a two day trip to the station before it is captured by the Canadarm2 and berthed to the Harmony node.

# 3860. Geminid Meteor Shower to Peak December 13-14:

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-12 03:54:49 UTC
From: n2kpc@...
Topic: 3860  Message: 3860

Geminid Meteor Shower to Peak December 13-14: Earth is moving deeper into the debris stream of rock comet http://science.nasa.gov/science-news/science-at-nasa/2013/27nov_rockcomet/ 3200 Phaethon, source of the annual Geminid meteor shower. The Canadian Meteor Orbit Radar (CMOR http://meteor.uwo.ca/research/radar/cmor_intro.html) has been monitoring a "hot spot" in the sky where Geminid meteoroids are hitting Earth's atmosphere at 78,000 MPH. Visibility will improve in the nights ahead as the Moon wanes and Earth moves deeper into the Geminid debris stream. Forecasters expect the shower to peak on December 13-14, with as many as 120 meteors per hour. The best time to look is between midnight and dawn on Saturday and Sunday. -- Thanks to http://www.spaceweather.com/

SSTV Transmissions from the International Space Station Set
The Russian Amateur Radio on the International Space Station (ARISS http://www.ariss.org/) team members plan to activate slow-scan television (SSTV) from the ISS on December 18 and December 20. Several passes http://www.arrl.org/files/media/News/SSTV_US-Dec%2018-20.txt will be over North America. The expected SSTV mode will be PD180 on a frequency of 145.800 MHz with 3-minute off periods between transmissions. Twelve different photos will be sent during the operational period. Transmissions will begin at around 1420 UTC on December 18 and 1240 UTC on December 20. The transmissions should terminate around 2130 UTC each day. Read more http://www.arrl.org/news/sstv-transmissions-from-the-international-space-station-set-for-december-18-and-20. -- Thanks to Gaston Bertels, ON4WF, ARISS-Europe Chairman

Super Guppy Spends a Restful Night in the NASA Langley Hangar

NASA's Super Guppy aircraft, designed to transport extremely large cargo, rests after making a special delivery to the NASA Langley Research Center in Hampton, Virginia. The aircraft measures more than 48 feet to the top of its tail and has a wingspan of more than 156 feet with a 25-foot diameter cargo bay – the aircraft features a hinged nose that opens 110 degrees.
A representative test article of a futuristic hybrid wing body aircraft will be unloaded from the Super Guppy on Friday, Dec. 12 at Langley Research Center. The large test article, representing the uniquely shaped fuselage cross-section, is made out of a low-weight, damage-tolerant, stitched composite structural concept called Pultruded Rod Stitched Efficient Unitized Structure, or PRSEUS. Langley's Combined Loads Test System will subject the revolutionary carbon-fiber architecture test article to conditions that simulate loads typically encountered in flight.

# 3868. Propagation Forecast Bulletin 50 ARLP050

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-12 23:20:20 UTC
From: n2kpc@...
Topic: 3868  Message: 3868

ZCZC AP50
QST de W1AW
Propagation Forecast Bulletin 50 ARLP050
From Tad Cook, K7RA
Seattle, WA December 12, 2014
To all radio amateurs

SB PROP ARL ARLP050
ARLP050 Propagation de K7RA

Compared to the previous seven days, solar activity dropped over the past week December 4 to 10 with average daily sunspot numbers down 63.6 points to 88.4, and average daily solar flux off 32.5 points to 139.6. But both numbers were higher on December 11, a good sign.

The latest forecast has solar flux at 155, 160, and 165 on December 12 to 14, 170 on December 15 to 17, 165 on December 18, 170 on December 19 and 20, 165 and 150 on December 21 and 22, 155 on December 23 to 27, 150 on December 28 and 29, 145 and 140 on December 30 and 31, 135 on January 1 to 4, then 140, 145, 150, 155 and 160 on January 5 to 9 and 165 on January 10 to 12. It then reaches a peak of 175 on January 14 and 15.

Predicted planetary A index is 5 on December 12, 18 on December 13, 15 on December 14 and 15, 12 on December 16 to 18, 10 on December 19 and 20, 5 on December 21 to 27, 8 on December 28 to 30, 10 on December 31 and January 1, then 12, 25, 15 and 10 on January 2 to 5, 8 on January 6 and 7, 10 on January 8 and 9, 8 on January 10 to 12, 10 and 12 on January 13 and 14, and 10 on January 15 and 16.

Let's see what OK1MGW has for us in his prediction for geomagnetic conditions.

OK1MGW sees quiet to active conditions December 12 and 13, quiet to unsettled December 14 and 15, quiet to active December 16 and 17, quiet to unsettled December 18 to 20, mostly quiet December 21, quiet December 22, mostly quiet December 23 and 24, quiet December 25 and 26, quiet to unsettled December 27 and 28, mostly quiet December 29 to 31, quiet to unsettled January 1 and 2, active to disturbed January 3, quiet to active January 4 and 5, and quiet to unsettled January 6 and 7.

He believes there will be an increase in solar wind on December 13, 16 to 18 and January 2 to 5.

Don't forget this weekend is the annual ARRL 10 Meter Contest (see 10 Meter http://www.arrl.org/10-meterfor rules and general information).

This is a really fun event, and due to the nature of ten meters, it always holds many surprises. The Geminids meteor shower peaks this weekend, and it is likely that ionized meteor trails could enhance propagation at the high end of the HF spectrum.

It is also really easy to get a ten meter station on the air with minimal effort. A half-wave dipole is only about 16.5 feet long for this band, and you can hang it off just about anything to get it some minimal distance in the air. Also, Technician Class hams can participate in this one using SSB on 28.3 to 28.5 MHz and CW on 28.0 to 28.3 MHz. There is also an easy 10 meter vertical described at the ARRL URL above for the 10 meter contest.

I was predicting conditions should be slightly better than they were during the 2013 contest, with somewhat higher solar activity about the same geomagnetic instability. But now the geomagnetic conditions look a little worse.

The December 10 planetary A index for December 12 to 14 was 5, 12 and 12. The December 11 forecast shows 5, 18 and 15 for those same days, or a little bit worse. These daily forecasts are at ftp://ftp.swpc.noaa.gov/pub/forecasts/45DF/ ftp://ftp.swpc.noaa.gov/pub/forecasts/45DF/. Check it again today
after 2100 UTC. Maybe it will be better.

In 2013 the solar flux on Friday through Sunday on the contest weekend was 141, 163 and 158, for an average of 154. This weekend the predicted Friday through Sunday solar flux is 155, 160 and 165, which averages out to 160. Last year the planetary A index over those same three days was 3, 16 and 7, average value 8.7. This year's forecast is 5, 18 and 15, with an average of 12.7. We'll see what happens.

Check 2013 bulletins at
http://www.arrl.org/w1aw-bulletins-archive/ARLP051/2013
http://www.arrl.org/w1aw-bulletins-archive/ARLP051/2013and
http://www.arrl.org/w1aw-bulletins-archive/ARLP052/2013
http://www.arrl.org/w1aw-bulletins-archive/ARLP052/2013to see a comparison with propagation from previous years and what the numbers were on the contest weekend.

NOAA Space Weather Prediction Center has transitioned to their new servers, so you will want to check
ftp://ftp.swpc.noaa.gov/pub/indices/DSD.txt ftp://ftp.swpc.noaa.gov/pub/indices/DSD.txtand
ftp://ftp.swpc.noaa.gov/pub/indices/DGD.txt ftp://ftp.swpc.noaa.gov/pub/indices/DGD.txtfor solar flux, sunspot
and geomagnetic indices, and
ftp://ftp.swpc.noaa.gov/pub/forecasts/45DF/ ftp://ftp.swpc.noaa.gov/pub/forecasts/45DF/for the daily 45-day
forecast. Of course Canada still serves up their same three times per day solar flux numbers from their observatory at both
http://www.spaceweather.ca/solarflux/sx-5-flux-eng.php

http://www.spaceweather.ca/solarflux/sx-5-flux-eng.phpand
ftp://ftp.geolab.nrcan.gc.ca/data/solar_flux/daily_flux_values/fluxtable.txt
ftp://ftp.geolab.nrcan.gc.ca/data/solar_flux/daily_flux_values/fluxtable.txt
Take your pick. HTML or plain text.

Dick Bingham, W7WKR sent along some interesting historical material
on early amateur radio, assembled by W2PA. Check it out at
http://w2pa.net/HRH/ http://w2pa.net/HRH/.

For more information concerning radio propagation, see the ARRL
Technical Information Service at

an explanation of the
numbers used in this bulletin, see
http://arrl.org/the-sun-the-earth-the-ionosphere.
http://arrl.org/the-sun-the-earth-the-ionosphere.An archive of past
propagation bulletins is at
http://arrl.org/w1aw-bulletins-archive-propagation.
http://arrl.org/w1aw-bulletins-archive-propagation.More good
information and tutorials on propagation are at http://k9la.us/.

Monthly propagation charts between four USA regions and twelve
overseas locations are at http://arrl.org/propagation.

Instructions for starting or ending email distribution of ARRL
bulletins are at http://arrl.org/bulletins.

Sunspot numbers for December 4 through 10 were 137, 97, 73, 58, 77,
80, and 97, with a mean of 88.4. 10.7 cm flux was 157.6, 136.8,
128.7, 131.8, 132.6, 139.7, and 149.8, with a mean of 139.6.
Estimated planetary A indices were 11, 11, 13, 28, 17, 15, and 9,
with a mean of 14.9. Estimated mid-latitude A indices were 8, 8,
10, 19, 11, 12, and 6, with a mean of 10.6.

KC3BHD Fatu, who is the Wife of Earl WA3DX Than You for your time while working on her advance degree.
They just got their first HF Rig, A TEN-TEC Eagle.
When they were married earlier this year my Wife and I drove to the Wedding in MD and I setup a Eagle with a dipole and they were on the air right after they got hitched.

KC2ULS Gary has a Eagle and is also a member of the DVRA W2ZQ Club.
We drove down to Fazzio's Hardware in Glassboro NJ on Crosskeys Road and picked up one 21' section of sked 80 1" and one 1 1/2 " 21' section of sked 80 pipe to put together for his 160 meter horizontal square loop antenna because he was missing one tree, HiHi.
I used a 15 foot surf fishing rod to cast over the other three trees to pull the line up and over the top.

AC2MW Mike who is up at the W2QZ Shack during all three TEN-TEC Nets on Sunday and is always a big help when anything that needs to be done.
Mike is awaiting his Omni 7 any day now.

The Delaware Valley Radio Association, W2ZQ Club has many of it's members checking into the TEN-TEC Nets and the TEN-TEC Family is lucky to have them supporting us all.

It is not a big Club, but they do Radio and support my efforts in running the TEN-TEC Nets, use of the big antenna systems, Force 12 Triband 10-15-20, 14 element yagi with a Force 12, 2 element 40 meter yagi stacked above it.
These three have earned their Certificates in more ways than one.

I have only mentioned these three club members but the support from all of the W2ZQ Members is above and beyond the call of duty.

It is a lot of money to keep the shack and antenna systems going and the W2ZQ DVRA voted with all in favor to get a OMNI 7 of which they only need about $650. more. In due time.
A separate fund was setup for the new TEN-TEC radio so that monies would not be side tracked to something else.
Foresight in planning by the club is the way to upgrade.
Another reason for the Omni 7 was if we can't make it to the shack because of the bad weather, ICE, Snow, Hurricane Sandy, we can operate the HF Station from a EOC or our own homes.

So Congrats to these three W2ZQ DVRA Club Members.
PS, we all had a positive XMAS Holiday party this pass Wed. night and these three along with my Wife, Gaye, KB2YOA and everybody else had a great time and our TEN-TEC Radios were one of the main topics.
73,
Lloyd N2KPC PR

# 3874. TEN-TEC NETS TOMORROW SUNDAY 12-14-2014

Yahoo group: ten_tec_radio_net (2007 — 2014)

Andy,
Big contest on 10 meters.
I put another S-9 up today at the W2ZQ.
I added the V-18 vertical 18' next to the V-31 31' on the picnic table.
I will use the same radials on test.
I picked the V-18 up Thursday and will pickup the V-43 43' when Cheapham gets in the last shipment.
C U on the TEN-TEC Nets.
I will be listening for Earl and Fatu WA3DX and KC3BHD in Philadelphia on ground wave to see if they can make it up to the W2ZQ Shack.
73,
Lloyd N2KPC NCS

# 3878. TEN-TEC 10 METER SSB NET HAD 29 CHECKINS TODAY 12-14-2014

We had 29 Check'ins, NJ-14, PA-3, MA-2, KS-2, TX-2, NC-1, LA-1, VA-1, AZ-1, CN-2.

Well the net had a break in that the frequency was clear of contesters on 28.440 USB.
When the contester came near they moved up or down to give us a clear frequency.
Propagation was in and our and the noise disappeared from time to time.
Have a good week.
73,
C U next week.
Lloyd N2KPC NCS

Opportunity Pausing at a Bright Outcrop on Endeavour Rim, Sol 3854

NASA's Mars Exploration Rover Opportunity is continuing its traverse southward on the western rim of Endeavour Crater during the fall of 2014, stopping to investigate targets of scientific interest along way. This view is from Opportunity's front hazard avoidance camera on Nov. 26, 2014, during the 3,854th Martian day, or sol, of the rover's work on Mars. This camera is mounted low on the rover and has a wide-angle lens.
The scene includes Opportunity's robotic arm, called the "instrument deployment device," at upper left. Portions of the pale bedrock exposed on the ground in front of the rover are within the arm's reach. Researchers used instruments on the arm to examine a target called "Calera" on this patch of bedrock. The wheel tracks in the scene are from the drive -- in reverse -- to this location, a drive of 32.5 feet (9.9 meters) on Sol 3846 (Nov. 18, 2014).

# 3881. NASA's Mars Curiosity rover has measured a tenfold spike in methane

Yahoo group: ten_tec_radio_net (2007 — 2014)

Curiosity Detects Methane Spike on Mars

Dec. 16, 2014: NASA's Mars Curiosity rover has measured a tenfold spike in methane, an organic chemical, in the atmosphere around it and detected other organic molecules in a rock-powder sample collected by the robotic laboratory’s drill.

"This temporary increase in methane -- sharply up and then back down -- tells us there must be some relatively localized source," said Sushil Atreya of the University of Michigan, Ann Arbor, and Curiosity rover science team. "There are many possible sources, biological or non-biological, such as interaction of water and rock."

http://www.nasa.gov/jpl/msl/pia19088/ This image illustrates possible ways methane might be added to Mars' atmosphere (sources) and removed from the atmosphere (sinks). NASA's Curiosity Mars rover has detected fluctuations in methane concentration in the atmosphere, implying both types of activity occur on modern Mars. A longer caption http://www.nasa.gov/jpl/msl/pia19088/#.VJCyXntG8VQ discusses which are sources and which are sinks. Image Credit: NASA/JPL-Caltech/SAM-GSFC/Univ. of Michigan

Researchers used Curiosity’s onboard Sample Analysis at Mars (SAM) laboratory a dozen times in a 20-month period to sniff methane in the atmosphere. During two of those months, in late 2013 and early 2014, four measurements averaged seven parts per billion. Before and after that, readings averaged only one-tenth that level.

Curiosity also detected different Martian organic chemicals in powder drilled from a rock dubbed Cumberland, the first definitive detection of organics in surface materials of Mars. These Martian organics could either have formed on Mars or been delivered to Mars by meteorites.

Organic molecules, which contain carbon and usually hydrogen, are chemical building blocks of life, although they can exist without the presence of life. Curiosity's findings from analyzing samples of atmosphere and rock powder do not reveal whether Mars has ever harbored living microbes, but the findings do shed light on a chemically active modern Mars and on favorable conditions for life on ancient Mars.

http://www.nasa.gov/jpl/msl/pia19087/#.VJCyu3tG8VQ This graphic shows tenfold spiking in the abundance of methane in the Martian atmosphere surrounding NASA's Curiosity Mars rover, as detected by a series of measurements made with the Tunable Laser Spectrometer instrument in the rover's Sample Analysis at Mars laboratory suite. Image Credit: NASA/JPL-Caltech

"We will keep working on the puzzles these findings present," said John Grotzinger, Curiosity project scientist of the California Institute of Technology in Pasadena (Caltech). "Can we learn more about the active chemistry causing such fluctuations in the amount of methane in the atmosphere? Can we choose rock targets where identifiable organics have been preserved?"

Researchers worked many months to determine whether any of the organic material detected in the Cumberland sample was truly Martian. Curiosity’s SAM lab detected in several samples

some organic carbon compounds that were, in fact, transported from Earth inside the rover. However, extensive testing and analysis yielded confidence in the detection of Martian organics.

http://science.nasa.gov/mailing-lists/subscribe/

Identifying which specific Martian organics are in the rock is complicated by the presence of perchlorate minerals in Martian rocks and soils. When heated inside SAM, the perchlorates alter the structures of the organic compounds, so the identities of the Martian organics in the rock remain uncertain.

"This first confirmation of organic carbon in a rock on Mars holds much promise," said Curiosity participating scientist Roger Summons of the Massachusetts Institute of Technology in Cambridge. "Organics are important because they can tell us about the chemical pathways by which they were formed and preserved. In turn, this is informative about Earth-Mars differences and whether or not particular environments represented by Gale Crater sedimentary rocks were more or less favorable for accumulation of organic materials. The challenge now is to find other rocks on Mount Sharp that might have different and more extensive inventories of organic compounds."

Researchers also reported that Curiosity's taste of Martian water, bound into lakebed minerals in the Cumberland rock more than three billion years ago, indicates the planet lost much of its water before that lakebed formed and continued to lose large amounts after.

SAM analyzed hydrogen isotopes from water molecules that had been locked inside a rock sample for billions of years and were freed when SAM heated it, yielding information about the history of Martian water. The ratio of a heavier hydrogen isotope, deuterium, to the most common hydrogen isotope can provide a signature for comparison across different stages of a planet's history.

"It's really interesting that our measurements from Curiosity of gases extracted from ancient rocks can tell us about loss of water from Mars," said Paul Mahaffy, SAM principal investigator of NASA’s Goddard Space Flight Center in Greenbelt, Maryland, and lead author of a report published online this week by the journal Science

The ratio of deuterium to hydrogen has changed because the lighter hydrogen escapes from the upper atmosphere of Mars much more readily than heavier deuterium. In order to go back in time and see how the deuterium-to-hydrogen ratio in Martian water changed over time, researchers can look at the ratio in water in the current atmosphere and water trapped in rocks at different times in the planet’s history.

Martian meteorites found on Earth also provide some information, but this record has gaps. No known Martian meteorites are even close to the same age as the rock studied on Mars, which formed about 3.9 billion to 4.6 billion years ago, according to Curiosity’s measurements.

The ratio that Curiosity found in the Cumberland sample is about one-half the ratio in water vapor in today's Martian atmosphere, suggesting much of the planet's water loss occurred since that rock formed. However, the measured ratio is about three times higher than the ratio in the original water supply of Mars, based on assumption that supply had a ratio similar to that measured in Earth's oceans. This suggests much of Mars' original water was lost before the rock formed.

Curiosity is one element of NASA's ongoing Mars research and preparation for a human mission to Mars in the 2030s. Caltech manages the Jet Propulsion Laboratory in Pasadena, California, and JPL manages Curiosity rover science investigations for NASA's Science Mission Directorate in Washington. The SAM investigation is led by Paul Mahaffy of Goddard. Two of SAM instruments key in these discoveries are the Quadrupole Mass Spectrometer, developed at Goddard, and the Tunable Laser Spectrometer, developed at JPL.

The results of the Curiosity rover investigation into methane detection and the Martian organics in an ancient rock were discussed at a news briefing Tuesday at the American Geophysical Union's convention in San Francisco. The methane results are described in a paper published online this week in the journal Science by NASA scientist Chris Webster of JPL, and co-authors.

A report on organics detection in the Cumberland rock by NASA scientist Caroline Freissenet, of Goddard, and co-authors, is pending publication.

# 3882. Since 2012, NASA's Voyager 1 spacecraft has experienced three 'tsunami waves' in interstellar space

Yahoo group: ten_tec_radio_net (2007 — 2014)

Voyager Buffeted by Interstellar 'Tsunami Waves'

Dec. 16, 2014: Since 2012, NASA's Voyager 1 spacecraft has experienced three 'tsunami waves' in interstellar space. The most recent, which reached the spacecraft earlier this year, is still propagating outward according to new data. It is the longest-lasting shock wave that researchers have seen in interstellar space.
"Most people would have thought the interstellar medium would have been smooth and quiet. But these shock waves seem to be more common than we thought," said Don Gurnett, professor of physics at the University of Iowa in Iowa City. Gurnett presented the new data Monday, Dec. 15 at the American Geophysical Union meeting in San Francisco.
https://www.youtube.com/watch?v=_u-RZTwpECg#t=41 The Voyager 1 spacecraft has experienced three "tsunami waves" in interstellar space. Listen to how these waves cause surrounding ionized matter to ring like a bell.

A "tsunami wave" occurs when the sun emits a coronal mass ejection, throwing out a magnetic cloud of plasma from its surface. This generates a wave of pressure. When the wave runs into the interstellar plasma -- the charged particles found in the space between the stars -- a shock wave results that perturbs the plasma.
"The tsunami causes the ionized gas that is out there to resonate -- "sing" or vibrate like a bell," said Ed Stone, project scientist for the Voyager mission based at California Institute of Technology in Pasadena.
http://science.nasa.gov/mailing-lists/subscribe/
This is the third shock wave that Voyager 1 has experienced. The first event was in October to November of 2012, and the second wave in April to May of 2013 revealed an even higher plasma density. Voyager 1 detected the most recent event in February, and it is still going on as of November data. The spacecraft has moved outward 250 million miles (400 million kilometers) during the third event.
"This remarkable event raises questions that will stimulate new studies of the nature of shocks in the interstellar medium," said Leonard Burlaga, astrophysicist emeritus at NASA Goddard Spaceflight Center in Greenbelt, Maryland, who analyzed the magnetic field data that were key to these results.
It is unclear to researchers what the unusual longevity of this particular wave may mean. They are also uncertain as to how fast the wave is moving or how broad a region it covers. The second tsunami wave helped researchers determine in 2013 that Voyager 1 had left the heliosphere, the bubble created by the solar wind encompassing the sun and the planets in our solar system. Denser plasma "rings" at a higher frequency, and the medium that Voyager flew through, was 40 times denser than what had been previously measured. This was key to the conclusion that Voyager had entered a frontier where no spacecraft had gone before: interstellar space.
"The density of the plasma is higher the farther Voyager goes," Stone said. "Is that because the interstellar medium is denser as Voyager moves away from the heliosphere, or is it from the shock wave itself? We don't know yet."
Gurnett, principal investigator of the plasma wave instrument on Voyager, expects that such shock waves propagate far out into space, perhaps even to twice the distance between the

sun and where the spacecraft is right now.
Voyager 1 and its twin, Voyager 2, were launched 16 days apart in 1977. Both spacecraft flew by Jupiter and Saturn. Voyager 2 also flew by Uranus and Neptune. Voyager 2, launched before Voyager 1, is the longest continuously operated spacecraft and is expected to enter interstellar space in a few years.

The TT CW net is on tonight at 8 PM Eastern time (0100Z). 7063 +/-

Send QNB and last 2 letters of call for relay to NCS. Someone will pick up.
Send any speed 5 to 13 wpm. No speeders!

I will match your speed.

Send exchange
CALL NAME STATE (only) RADIO RST

Please zero beat my signal.

Also, please when I QNI send last 2 letters of suffix, and space out
when sending to prevent
doubling.

There are problably some other stuff but can't remember (smile).

C U there! QNI check-in, QNB relay, AS (sent together) wait

City Lights Shine Brighter During the Holidays

City lights shine brighter during the holidays when compared with the rest of the year, as shown using a new analysis of daily data from the NASA-NOAA Suomi National Polar-orbiting Partnership (Suomi NPP) satellite. Dark green pixels are areas where lights are 50 percent brighter, or more, during December.
This new analysis of holiday lights uses an advanced algorithm, developed at NASA's Goddard Space Flight Center in Greenbelt, Maryland, that filters out moonlight, clouds and airborne particles in order to isolate city lights on a daily basis. The data from this algorithm provide high-quality satellite information on light output across the globe, allowing scientists to track when – and how brightly – people illuminate the night. A daily global dynamic dataset of nighttime lights is a new way for researchers to understand the broad societal forces impacting energy decisions and to look at how people use cities, from an energy perspective.

# 3890. NASA Satellites Measure Increase of Sun’s Energy Absorbed in the Arctic

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-18 00:56:43 UTC
From: n2kpc@...
Topic: 3890 Message: 3890

December 17, 2014

RELEASE 14-043

NASA Satellites Measure Increase of Sun’s Energy Absorbed in the Arctic

NASA satellite instruments have observed a marked increase in solar radiation absorbed in the Arctic since the year 2000 – a trend that aligns with the steady decrease in Arctic sea ice during the same period.
While sea ice is mostly white and reflects the sun’s rays, ocean water is dark and absorbs the sun’s energy at a higher rate. A decline in the region’s albedo – its reflectivity, in effect – has been a key concern among scientists since the summer Arctic sea ice cover began shrinking in recent decades. As more of the sun’s energy is absorbed by the climate system, it enhances ongoing warming in the region, which is more pronounced than anywhere else on the planet.
Since the year 2000, the rate of absorbed solar radiation in the Arctic in June, July and August has increased by five percent, said Norman Loeb, of NASA’s Langley Research Center, Hampton, Virginia. The measurement is made by NASA’s Clouds and the Earth’s Radiant Energy System (CERES) instruments, which fly on multiple satellites.

http://www.nasa.gov/sites/default/files/sea_ice_fraction_change_and_absorbed_solar_radiation_change.png

The Arctic Ocean is absorbing more of the sun's energy in recent years as white, reflective sea ice melts and darker ocean waters are exposed. The increased darker surface area during the Arctic summer is responsible for a 5 percent increase in absorbed solar radiation since 2000.

Image Credit:
NASA Goddard's Scientific Visualization Studio/Lori Perkins

Feature Link:
Download related multimedia in HD formats from NASA Goddard's Scientific Visualization Studio

While a five percent increase may not seem like much, consider that the rate globally has remained essentially flat during that same time. No other region on Earth shows a trend of potential long-term change.
When averaged over the entire Arctic Ocean, the increase in the rate of absorbed solar radiation is about 10 Watts per square meter. This is equivalent to an extra 10-watt light bulb shining continuously over every 10.76 square feet of Arctic Ocean for the entire summer.
Regionally, the increase is even greater, Loeb said. Areas such as the Beaufort Sea, which has experienced the some of the most pronounced decreases in sea-ice coverage, show a 50 watts per square meter increase in the rate of absorbed solar radiation.

http://www.nasa.gov/sites/default/files/earthrightnow2_13_6.png

Five new NASA Earth science missions are launching in 2014 to expand our understanding of Earth’s changing climate and environment.

Feature Link:
NASA's "Earth Right Now" website

“Advances in our understanding of Arctic climate change and the underlying processes that influence it will depend critically upon high quality observations like these from CERES,” Loeb said.
As a region, the Arctic is showing more dramatic signs of climate change than any other spot on the planet. These include a warming of air temperatures at a rate two to three times greater than the rest of the planet and the loss of September sea ice extent at a rate of 13 percent per decade.
While these CERES measurements could ultimately become another of those signs of dramatic climate change, right now scientists say they have obtained the bare minimum of a data record needed to discern what’s happening over the long term.
Getting data beyond 15 years will allow scientists to better assess if recent trend falls outside the realm of natural variability, said Jennifer Kay, an atmospheric scientist at the Cooperative Institute for Research and Environmental Science at the University of Colorado.
“We need long time series to detect climate change signals over the internal variability. For example, observed sea ice loss over the last 30 years cannot be explained by natural variability alone.” Kay said. “Fifteen years is long, but climate is often defined as the average over 30 years – so we are only half-way there with the CERES observations.”
Kay and colleagues have also analyzed satellite observations of Arctic clouds during this same 15-year period. Kay’s research shows summer cloud amounts and vertical structure are not being affected by summer sea ice loss. While surprising, the observations show that the bright sea ice surface is not automatically replaced by bright clouds. Indeed, sea ice loss, not clouds, explain the increases in absorbed solar radiation measured by CERES.
Increasing absorbed solar radiation is causing multiple changes in the sea ice cover, said Walt Meier, a sea ice scientist from NASA’s Goddard Space Flight Center, Greenbelt, Maryland. Two of those changes include the timing of the beginning of the melt season each year and the loss of older, thicker sea ice.
The onset of the melt season in the high Arctic is now on average seven days earlier than it was in 1982, Meier said. Earlier melting can lead to increased solar radiation absorption. This is one step in a potential feedback cycle of warming leading to melting, melting leading to increased solar radiation absorption, and increased absorption leading to enhanced warming.
Since 2000, the Arctic has lost 1.4 million square kilometers (541,000 square miles) of older ice that is more than 3 meters thick, which during winter has essentially been replaced by ice that is less than 2 meters thick, according to data provided by Mark Tschudi at the University of Colorado. Once again, Meier said, this trend is a step in a feedback cycle.
“Having younger and thus thinner ice during winter makes the system more vulnerable to ice loss during the summer melt season,” Meier said.
CERES instruments are currently flying on the Terra, Aqua and Suomi-NPP satellites. The Terra satellite launched Dec. 18, 1999, and CERES first started collecting Arctic data in 2000 so 2015 will mark 15 continuous years of CERES measurements over the Arctic.
The instruments include three radiometers – one measuring solar radiation reflected by Earth (shortwave), one measuring thermal infrared radiation emitted by Earth (longwave), and one measuring all outgoing radiation, whether emitted or reflected.
73,

Lloyd N2KPC PR

MEDIA ADVISORY M14-304

NASA to Discuss Today Asteroid Redirect Mission Capture Concept, Next Step in Journey to Mars

http://www.nasa.gov/sites/default/files/m14-204_0.jpg

This image, taken by NASA's Near Earth Asteroid Rendezvous mission in 2000, shows a close-up view of Eros, an asteroid with an orbit that takes it somewhat close to Earth. NASA's Spitzer Space Telescope observed Eros and dozens of other near-Earth asteroids.

Image Credit:
NASA/JHUAPL

NASA will host a media teleconference at 4 p.m. EST today during which agency officials will discuss and answer questions on the selection of an Asteroid Redirect Mission concept. The mission is to retrieve an asteroid mass and redirect it into lunar orbit, where astronauts will explore it in the 2020s. The mission will test a number of new capabilities needed for future human deep space expeditions, including to Mars.
Participants for the media teleconference are:
Robert Lightfoot, NASA associate administrator Michele Gates, program director, NASA’s Asteroid Redirect Mission Lindley Johnson, program executive, NASA’s Near Earth Object Program To participate, media must e-mail their name and affiliation to Trent Perrotto at trent.j.perrotto@nasa.gov mailto:trent.j.perrotto@nasa.gov before 4 p.m.
Audio of the media teleconference will stream live on NASA's website at:
http://www.nasa.gov/newsaudio http://www.nasa.gov/newsaudio

Find more information about the Asteroid Redirect Mission at:

Ray,
You are correct it is good. I was more referring too the band conditions. We had stations that I, ?normally, can barely hear booming in while usually strong stations were weak, plus, some deep QSB. No issues with the amount of check-ins.?

75th Anniversary of NASA Ames

December 20, 2014 marks NASA Ames Research Center's 75th Anniversary. The center was established in 1939 as the second laboratory of the National Advisory Committee for Aeronautics, and was named for the chair of the NACA, Joseph S. Ames. It was located at Moffett Field in Sunnyvale, California, now at the heart of Silicon Valley. The Laboratory was renamed the NASA Ames Research Center with the formation of NASA in 1958.
This June 2, 1943 photograph shows the construction of the Ames full-scale 40- by 80-foot wind tunnel, with a side view of the entrance cone and a blimp in the background.

December 18, 2014

RELEASE 14-339

NASA’s Orion Arrives Back at Kennedy, Media Invited to View Spacecraft

http://www.nasa.gov/sites/default/files/14-339_0.jpg

NASA’s Orion spacecraft returned to the agency’s Kennedy Space Center in Florida Dec. 18, 2014. The spacecraft flew to an altitude of 3,600 miles in space during a Dec. 5 flight test designed to stress many of the riskiest events Orion will see when it sends astronauts on future missions to an asteroid and on the journey to Mars.

Image Credit:
NASA

After traveling more than 3,600 miles above Earth and 600 miles over sea, NASA’s Orion spacecraft completed the final leg of its journey by land Thursday, arriving home at the agency’s Kennedy Space Center in Florida. Media representatives are invited to attend an event at 10:30 a.m. EST Friday, Dec. 19, marking the arrival.
U.S. media must apply for credentials to attend Friday’s event at Kennedy by 8 a.m. Friday. All media must present two forms of legal, government identification to access Kennedy. One form must be a photo ID, such as a passport or driver's license. Media not previously credentialed for SpaceX CRS-5 will be issued badges at the Kennedy Badging Office, located on State Road 405 east of the Kennedy Space Center Visitor Complex. Journalists must arrive at Kennedy's Press Site by 9:45 a.m. Friday for transportation to the event.
Media accreditation requests must be submitted online at:
https://media.ksc.nasa.gov https://media.ksc.nasa.gov/
The deadline for international media to attend in person already has passed.
The spacecraft’s cross-country return, a 2,700 mile road trip from Naval Base San Diego to Kennedy, sets the stage for in-depth analysis of data obtained during Orion’s trip to space and will provide engineers detailed information on how the spacecraft fared during its two-orbit, 4.5-hour flight test, completed on Dec. 5.
“Orion’s flight test was a critical step on our journey to send astronauts to explore deep space destinations,” said Bill Hill, deputy associate administrator for exploration systems development at NASA Headquarters in Washington. “We stressed Orion to help us evaluate its performance and validate our computer models and ground-based evaluations, and the information we gathered will help us improve Orion’s design going forward.”

Data was gathered in real time during the flight test, and more was removed from the vehicle when it arrived on land in San Diego before it was crated for the drive to Florida.
“The flight itself was such a great success, but that’s only the beginning of the story,” said Orion Program Manager Mark Geyer. “Now we get to dig in and really find out if our design performed like we thought it would. This is why we flew the flight. We demonstrated on Dec. 5 that Orion is a very capable vehicle. Now we’re going to keep testing and improving as we begin building the next Orion.”
An initial inspection of the crew module turned up nothing unexpected. There were indications of some micrometeoroid orbital debris strikes on the sides of Orion, which was anticipated.
With the spacecraft back at Kennedy, where it was assembled and prepared for launch, engineers will be able to remove the back shell of the spacecraft and perform inspections of its cabling, fluid lines, propulsion system and avionics boxes. Heat shield samples already have been removed and sent to a laboratory where their thickness, strength and charring will be examined.
The information will be used to make improvements to Orion’s design before its next flight, Exploration Mission-1, when it will launch uncrewed on top of NASA’s new Space Launch System for the first time into a large orbit around the moon.
While the information is being gathered from the flight test, testing also will continue on Earth. On Dec. 18, engineers dropped a test version of the Orion capsule from a C-17 aircraft 25,000 feet above U.S. Army’s Yuma Proving Ground in Arizona. The latest in a series of tests designed to certify Orion’s parachute system, the test simulated a failure of one of Orion’s three main parachutes for a first-time demonstration of several modifications made to the parachute system to improve its performance.
Panels for the pressure vessel that will form the inner structure for the next Orion crew module are in production and set to be welded together at the end of summer 2015.
Meanwhile, the European Space Agency is building the test article of the Orion service module they will be supplying for Exploration Mission-1, and assembly of the launch abort system for that flight will begin in April.
NASA’s Ground Systems Development and Operations Program managed Orion’s cross-country trip from Naval Base San Diego to Kennedy. The crew module will be refurbished for use in Ascent Abort-2 in 2018, a test of Orion’s launch abort system.
For more information about the Ground Systems Development and Operations Program at Kennedy, visit:
http://go.nasa.gov/groundsystems http://go.nasa.gov/groundsystems
For information about Orion, visit:

Today at 6:38 AM
Hi! Things are shaping up for our annual Radio Merit Badge Day at the College of New Jersey on Jan 10, 2015. We already have 53 Scouts registered and expect a few more. And we always have a lot of fun ourselves. Thanks for offering to help out!

Attached is the initial draft plan for assignments. As usual, we try to team up new instructors with veterans to provide some continuity. But please make sure you download and review all three class modules, as we might always have to make last minute assignment changes if something comes up at the last minute. They are available for download under National Radio Scouting Committee at http://www.scouting.org/jota/radio_merit_badge.aspx

As room 136 may be under construction this year, we'll be using Room 154 for our initial gathering. All rooms now have projectors to connect your laptop.

We can still use a few more instructors and mentors. If you know of any hams who would like to help, have them contact me privately at k2gw@arrl.net mailto:k2gw@arrl.net. Likewise, if you can bring a laptop or projector also let me know. While we only need three of each, spares keep Murphy away.

Thanks once again to the Ham community for their help. This is our premier local event for introducing Amateur Radio to the youth of our area.

73

Gary Wilson, K2GW

Rosetta to Swoop Down on Comet in February

Dec 19, 2014: The European Space Agency’s orbiting Rosetta spacecraft is expected to come within four miles (six kilometers) of the surface of comet 67P/Churyumov–Gerasimenko in February of next year. The flyby will be the closest the comet explorer will come during its prime mission.
https://www.youtube.com/watch?v=BOSyNtuWhGk This animation shows Comet 67P/Churyumov-Gerasimenko, with overlay boxes indicating the fields of view of three cameras on the European Space Agency's Rosetta spacecraft: the wide angle camera of OSIRIS, the narrow angle camera of OSIRIS and the spacecraft's Navigation Camera.

“It is the earliest we could carry it out without impacting the vitally important bound orbits that are currently being flown,” said Matt Taylor, the Rosetta project scientist from the European Space Research and Technology Center, Noordwijk, the Netherlands. “As the comet becomes more and more active, it will not be possible to get so close to the comet. So this opportunity is very unique.”
The low flyby will be an opportunity for Rosetta to obtain imagery with a resolution of a few inches (tens of centimeters) per pixel. The imagery is expected to provide information on the comet’s porosity and albedo (its reflectance). The flyby will also allow the study of the processes by which cometary dust is accelerated by the cometary gas emission.
http://www.nasa.gov/jpl/rosetta/pia19095/#.VJTAb_8Cc From the location where it came to rest after bounces, the Philae lander of the European Space Agency's Rosetta mission captured this view of a cliff on the nucleus of comet 67P/Churyumov-Gerasimenko. The feature is called "Perihelion Cliff." The image is from the lander's CIVA camera. Image Credit: ESA/Rosetta/Philae/CIVA

“Rosetta is providing us with a grandstand seat of the comet throughout the next year. This flyby will put us track side -- it’s going to be that close,” said Taylor.
The Rosetta orbiter deployed its Philae lander to one spot on the comet's surface in November. Philae obtained the first images taken from a comet's surface and will provide analysis of the comet's possible primordial composition.
Comets are time capsules containing primitive material left over from the epoch when our sun and its planets formed. Rosetta will be the first spacecraft to witness at close proximity how a comet changes as it is subjected to the increasing intensity of the sun's radiation. Observations will help scientists learn more about the origin and evolution of our solar system and the role comets may have played in seeding Earth with water, and perhaps even life.
Rosetta is a European Space Agency mission with contributions from its member states and NASA. The Jet Propulsion Laboratory, Pasadena, California, a division of the California Institute of Technology in Pasadena, manages the U.S. contribution of the Rosetta mission for NASA's Science Mission Directorate in Washington. JPL also built the MIRO instrument and hosts its principal investigator, Samuel Gulkis. The Southwest Research Institute (San Antonio and Boulder) developed the Rosetta orbiter's IES and Alice instruments, and hosts their principal investigators, James Burch (IES) and Alan Stern (Alice).
For more information on the U.S. instruments aboard Rosetta, visit

http://photoadventures.lapplandmedia.se/en
WEEKEND MAGNETIC STORMS: NOAA forecasters estimate a 60% to 65% chance of minor geomagnetic storms this weekend when a pair of CMEs is expected to sideswipe Earth's magnetic field. High-latitude sky watchers should be alert for auroras after nightfall. Aurora alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
X-FLARE! Big sunspot AR2242 erupted on Saturday, Dec. 20th @ 00:27 UT, producing an intense X1.8-class
http://spaceweather.com/glossary/flareclasses.html?PHPSESSID=bli7efn6ahda5vqhele66up077
solar flare. This picture taken by NASA's Solar Dynamics Observatory shows a plume of material flying away from the blast site:
http://spaceweather.com/images2014/20dec14/x2.jpg?PHPSESSID=bli7efn6ahda5vqhele66up077
Radio emissions from shock waves rippling through the sun's atmosphere suggest that a CME is en route. However, we are still waiting for data from SOHO coronagraphs to confirm the existence and trajectory of a massive storm cloud. If a CME is coming, it will probably take 2 to 3 days to reach Earth.
There has already been one Earth-effect: Extreme UV radiation from the flare ionized our planet's upper atmosphere and blacked out HF radio communications over Australia and the South Pacific. Below 10 MHz, transmissions were strongly attenuated for more than two hours. Stay tuned for updates. Solar flare alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
Realtime Space Weather Photo Gallery http://spaceweathergallery.com/
RADS ON A PLANE, CONTINUED: Regular readers may remember last month's reports by Dr. Tony Phillips of radiation measurements inside commercial airplanes. During a cross-country trip between Reno NV and Washington DC, he absorbed a dose of ionizing radiation equal to about 3 dental x-rays.
However, not every trip is so "radioactive." On Dec. 17th, he flew from Reno to San Francisco--a short hop over the Sierras to attend the American Geophysical Union meeting--and the dose was much less. These curves show his measurements during the flight:
http://spaceweather.com/images2014/18dec14/radiationplot.jpg?PHPSESSID=bli7efn6ahda5vqhele66up077
Compared to last month's travel, there was relatively little radiation on this flight. From take-off to landing, the total dose was only about 3% of a dental X-ray -- a hundred times less than before.
Why so little? For one thing, the flight was brief, less than an hour long. Moreover, it was low. The cruising altitude of the small commuter jet was only 26,000 feet compared to as much as 39,000 feet for last month's cross-country flights. When it comes to "rads on a plane," altitude matters. The source of the radiation is cosmic rays from space; the closer you are to space, the more radiation you are going to absorb. Short, low flights like the Reno to San Francisco hop are best for avoiding exposure.
The data come from a pair of radiation detectors routinely flown to the stratosphere onboard Earth to Sky Calculus

https://www.facebook.com/pages/Earth-to-Sky-Calculus/174490502634920 Space Weather Buoys. The pager-sized devices are sensitive to ionizing radiation such as X-rays and gamma-rays in the energy range 10 keV to 20 MeV. Ideally, the two detectors should register the same dose rates throughout the flight. Slight differences between the two curves are an indication of the uncertainty in the measurements.
It is important to note that the sensors Phillips carried onboard the plane do not detect one of the most important forms of radiation: neutrons. Neutrons provide much of the biologically effective radiation dose at altitudes of interest to aviation and space tourism. To account for these uncharged particles, the doses discussed above should be doubled or tripled. To improve our estimates of the total dose rate, the students of Earth to Sky Calculus are https://www.facebook.com/media/set/?set=a.763854700365161.1073741853.174490502634920&type=1 https://www.facebook.com/media/set/?set=a.763854700365161.1073741853.174490502634920&type=1 for future balloon missions and plane flights.

Lloyd N2KPC PR

# 3905. TEN-TEC Nets Tomoorow 12-21-2014 TEN METERS IS WIDE OPEN

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-20 22:58:38 UTC
From: n2kpc@...
Topic: 3905  Message: 3905

The 10 Meter band is GREAT, SFI-203 A-index 008 K-index 1

Just worked W1AW/KH6 from the W2ZQ Club Station in NJ.

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 40 meter CW net starts each Wednesday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity

C U There on the Air.
73,
Lloyd N2KPC NCS RNCS PR ANM

# 3906. TEN Meter Band is realy hopping tonight

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-20 23:19:25 UTC
From: n2kpc@...
Topic: 3906  Message: 3906

If you have not checked in to the TEN-TEC 10 Meter SSB Net yet give it a shot tomorrow.
The SFI is 203 as I type this 2 U.
I will be working the net with a 14 element yagi and two S-9 vertical antennas one V-18 18' and a V-31 31'.

Hope to C U on the air.

The DX should be Great too.

W1AW/KH6 is on 28372.5 split right now running split.
73,
Lloyd N2KPC NCS

History[edit http://en.wikipedia.org/w/index.php?title=CHU_(radio_station)&action=edit&section=1] Radio time signals allowed accurate and rapid distribution of time signals beyond the range of the telegraph or visual signals. This was of particular value in surveying remote areas, where time signals allowed accurate determination of longitude. In the summer of 1914, a survey party at Quinze Dam on the Ottawa River http://en.wikipedia.org/wiki/Ottawa_River attempted to receive time signals transmitted from Kingston; however, signals were not resolvable and the time signal from Arlington, Virginia was used instead.[1] http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-DASH78-1
The station was started in 1923 by the Dominion Observatory http://en.wikipedia.org/wiki/Dominion_Observatory in Ottawa, Ontario http://en.wikipedia.org/wiki/Ottawa,_Ontario, Canada http://en.wikipedia.org/wiki/Canada, with a call sign http://en.wikipedia.org/wiki/Call_sign of 9CC on an experimental basis until 1928. Regular daytime transmission began under the callsign of VE9OB in January 1929

on a wavelength of 40.8 metres (about 7353 kHz). Continuous transmission at 90 metres began at the end of 1929, with other wavelengths being used experimentally. Time signals were generated from the observatory's own pendulum clocks. The transmitter oscillators were condenser-tuned and so frequency stability was not high until quartz crystal control was implemented in 1933. In 1938 the call was changed to CHU, operating on frequencies of 3330, 7335 and 14670 kHz, at a transmitter power of only 10 W. The 1000 Hz tone imposed on the carrier was derived from the quartz oscillator that determined transmit frequency, but the seconds pulses were still derived from the observatory pendulum clocks. The station automatically sent its call sign in Morse code once per hour, and pulses were coded to identify the time of day. Since the CHU power was not high enough to cover much of Canada, including survey parties working in the North, observatory time signals were also transmitted by a Department of Transport station with 2 kW power. In 1947 three new transmitters with 300 W power were installed for the three frequencies. In 1951 a Collins transmitter rated for 3 kW was put in service on 7335 kHz.[1]
http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-DASH78-1
Since deciphering even a simple time code "by ear" was occasionally difficult under field conditions, voice announcements of time and station identification were added to CHU in 1952, using a speaking clock http://en.wikipedia.org/wiki/Speaking_clock made by Atlier Brillie Freres of France. Fredrick Martin Meach of the Canadian embassy in Paris recorded the time announcements in English, which were stored on strips of photographic film and played back under control of the observatory clocks. In 1960 the speaking clock was replaced with one manufactured by Audichron http://en.wikipedia.org/wiki/Audichron corporation and rented by the Dominion Observatory; this unit had more intelligible voice quality and lower maintenance. New English voice announcements were recorded by Harry Mannis of the Canadian Broadcasting Corporation http://en.wikipedia.org/wiki/Canadian_Broadcasting_Corporation. Bilingual announcements started in 1964, with French speech provided by Miville Couture of CBC Montreal.[1]
http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-DASH78-1
Until 1959 the carrier frequency, tone frequency and second pulses were derived from independent sources, and the carrier stability as that of any commercial short wave transmitter. A divider chain was put into service so that all of the CHU signals were derived from Western Electric standard crystal oscillators, with the seconds pulses divided down and monitored by continuous comparison with the observatory clocks. By 1978 all parts of the CHU transmitted signal were derived from an NRC-designed cesium beam frequency standard http://en.wikipedia.org/wiki/Atomic_clock.[1]
http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-DASH78-1
Also in 1959, the 14670 kHz transmitter was replaced with a new 20 kW unit. All site antennas were replaced with vertical antennas by 1971.
The station continued to be operated by the Observatory until 1970, when its operation was transferred to the Institute for National Measurement Standards at the National Research Council http://en.wikipedia.org/wiki/National_Research_Council_(Canada).
Effective January 1, 2009, CHU's 7 MHz frequency was changed to 7850 kHz, due to an allocations change and interference on 7335 kHz.
Broadcast format[edit
http://en.wikipedia.org/w/index.php?title=CHU_(radio_station)&action=edit&section=2] CHU's signal is used for continuous dissemination of official Canadian government time signals http://en.wikipedia.org/wiki/Time_signal. The CHU time signal and radio frequencies are derived from atomic clocks http://en.wikipedia.org/wiki/Atomic_clock. CHU's announcers are Harry Mannis http://en.wikipedia.org/w/index.php?title=Harry_Mannis&action=edit&redlink=1 in English and Simon Durivage http://en.wikipedia.org/wiki/Simon_Durivage in French.
CHU will acknowledge http://en.wikipedia.org/wiki/QSL_card listeners' reception reports.

A similar time signal http://en.wikipedia.org/wiki/National_Research_Council_Time_Signal from the National Research Council http://en.wikipedia.org/wiki/National_Research_Council_(Canada) is used by CBC http://en.wikipedia.org/wiki/Canadian_Broadcasting_Corporation radio services daily at noon ET on Radio-Canada's Première Chaîne http://en.wikipedia.org/wiki/Premi%C3%A8re_Cha%C3%AEne, and 1pm ET on CBC Radio One http://en.wikipedia.org/wiki/CBC_Radio_One.
Transmission system[edit http://en.wikipedia.org/w/index.php?title=CHU_(radio_station)&action=edit&section=3] CHU transmits 3 kW http://en.wikipedia.org/wiki/KW signals on 3330 and 14670 kHz http://en.wikipedia.org/wiki/KHz, and a 10 kW signal on 7850 kHz.[2] http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-2 These are nonstandard time signal channels; however, due to the prospect of interference with WWV and WWVH, the nonstandard frequencies are necessary. The signal is amplitude modulated http://en.wikipedia.org/wiki/Amplitude_modulation, with the lower sideband http://en.wikipedia.org/wiki/Sideband suppressed (emission type http://en.wikipedia.org/wiki/Types_of_radio_emissions H3E). The same information is carried on all three frequencies simultaneously including announcements every minute, alternating between English and French.
The CHU transmitter is located near Barrhaven, Ontario http://en.wikipedia.org/wiki/Barrhaven,_Ontario, 15 km southwest of Ottawa's http://en.wikipedia.org/wiki/Ottawa,_Ontario central business district.
The systems feeding the transmitters are duplicated for reliability, and have both battery and generator protection. The generator can also supply the transmitters. The announcements are made using digitally recorded voices. Individual vertical dipole antennas http://en.wikipedia.org/wiki/Dipole_antenna are used for each frequency.
CHU has long been licensed as "fixed service" within the band allocations of the International Telecommunications Union http://en.wikipedia.org/wiki/International_Telecommunications_Union.
CHU's 10 kW signal has been transmitted on 7850 kHz since January 1, 2009. Before then, the signal was transmitted on 7335 kHz, harmonically related to their 14670 kHz frequency. The frequency change was necessary due to an ITU HF global reallocation conference where the frequency region around 7300 kHz was turned over to different users.
Time signal format[edit http://en.wikipedia.org/w/index.php?title=CHU_(radio_station)&action=edit&section=4]

Typical broadcast with English voice announcement http://en.wikipedia.org/wiki/File:CHU_minute_english_announcement.ogg

http://upload.wikimedia.org/wikipedia/en/e/eb/CHU_minute_english_announcement.ogg

A typical minute's broadcast, including the Bell 103 time code and ending with the English-language announcement of 01:26 UTC on 21 November 2010.

Problems playing this file? See media help http://en.wikipedia.org/wiki/Wikipedia:Media_help.

French voice announcement http://en.wikipedia.org/wiki/File:CHU_french_voice_announcement.ogg

http://upload.wikimedia.org/wikipedia/en/3/3f/CHU_french_voice_announcement.ogg

A French-language voice announcement for 01:43 UTC on the same day.

Problems playing this file? See media help http://en.wikipedia.org/wiki/Wikipedia:Media_help. The primary time signal is a series of 300 ms-long 1000 Hz http://upload.wikimedia.org/wikipedia/commons/1/17/1000Hz.ogg tones, transmitted once per second, on the second. The following exceptions to the pattern provide additional information:
The top of the minute is marked by a half-second-long beep. The top of the hour is marked with a one second-long beep, followed by nine seconds of silence. The 29th second of a minute is always omitted (no beep). Between one and sixteen seconds past the minute (except at the top of the hour), CHU transmits the difference between UT1 http://en.wikipedia.org/wiki/UT1 and Coordinated Universal Time http://en.wikipedia.org/wiki/Coordinated_Universal_Time (UTC) by using split tones. For positive DUT1 values from +0.1 to +0.8 s, seconds 1 through 8 are split. For negative DUT1 values from −0.1 to −0.8 s, seconds 9 through 16 are split. Between 31 and 39 seconds past the minute inclusive, the once-per-second tones are reduced to 10-millisecond "ticks" while a digital time code is transmitted. The digital time code is formatted so that a Bell 103 http://en.wikipedia.org/wiki/Bell_103-compatible 300-baud modem can decode it,[3] http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-code-3 and CHU is the only time signal station that uses this format for its time code transmissions. For the last 10 seconds of each minute (seconds 50 to 59), the once-per-second tones are again cut to 10 milliseconds each, while CHU transmits a brief voice station identification, followed by voice announcements of the next minute in UTC, alternating between French http://en.wikipedia.org/wiki/French_language and English http://en.wikipedia.org/wiki/English_language. French announcements, using the voice of Radio-Canada http://en.wikipedia.org/wiki/Radio-Canada news anchor Simon Durivage http://en.wikipedia.org/wiki/Simon_Durivage, are transmitted first on the odd minutes, while English announcements, voiced by late CBC Radio http://en.wikipedia.org/wiki/CBC_Radio announcer Harry Mannis http://en.wikipedia.org/w/index.php?title=Harry_Mannis&action=edit&redlink=1, come first on the even minutes. The digital time code sends 10 characters at 300 bits per second using 8N2 asynchronous serial communication http://en.wikipedia.org/wiki/Asynchronous_serial_communication. This follows the Bell 103 http://en.wikipedia.org/wiki/Bell_103 standard, a 2225 Hz tone to represent a mark (1 bit) and 2025 Hz tone for a space (0 bit). Immediately after the 10 ms tick, a mark tone is sent until 133.3 ms, then 110 data bits, ending at precisely 500 ms. The final stop bit is extended by 10 ms of mark tone to ensure it is detected reliably, and the final 490 ms of the second are silent.[3] http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-code-3 The time of day (day of year through second) is transmitted twice during each second from 32 to 39. During second 31, additional information (year, DUT1, daylight saving time, and leap second warning bits) is transmitted.
Western Canada signal coverage[edit http://en.wikipedia.org/w/index.php?title=CHU_(radio_station)&action=edit&section=5] http://en.wikipedia.org/wiki/File:CHU-BC-dbu.png http://en.wikipedia.org/wiki/File:CHU-BC-dbu.png
Coverage of proposed CHU transmitter for Western Canada

CHU quite often cannot be received in Western Canada http://en.wikipedia.org/wiki/Western_Canada on any of its broadcast frequencies. Propagation conditions, low transmitter power coupled with the typical two ionospheric hops distances from Ottawa result in relatively weak time signals for Western Canada.

Electrical interference can further aggravate reception difficulty in suburban areas in the West. CHU can be practically unusable in most of Western Canada, as well as Nunavut http://en.wikipedia.org/wiki/Nunavut and the Northwest Territories http://en.wikipedia.org/wiki/Northwest_Territories, for significant stretches of time.[4] http://en.wikipedia.org/wiki/CHU_(radio_station)#cite_note-4
WWV http://en.wikipedia.org/wiki/WWV_(radio_station) and WWVH http://en.wikipedia.org/wiki/WWVH are the fallback in Western Canada. In the high arctic, however, both the US shortwave time stations and CHU become essentially unreliable or unusable.
Canada has no longwave time signal transmitters. The American station WWVB http://en.wikipedia.org/wiki/WWVB is the only option for reliable time signals during solar storms in the Western Arctic, based on WWVB's published pattern maps. If WWVB is not available, those who need precision time transfer may be able to use GPS http://en.wikipedia.org/wiki/GPS time transfer http://en.wikipedia.org/wiki/Time_transfer instead.

The 10 Meter band is GREAT, SFI-203 A-index 008 K-index 1

Just worked W1AW/KH6 from the W2ZQ Club Station in NJ.

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 40 meter CW net starts each Wednesday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change frequencies, as not to interfere with other Amateur Radio activity

C U There on the Air.

A New Record with Australia's Or, VK2IV making 54 Checkins.

NJ-18, CN-5, MA-4, CA-3, KS-3, TX-3, OH-2, PA-2, AZ-2, MI-2,

LA-1, GA-1, KY-1, VA-1, CO-1, OK-1, NV-1, NC-1, FL-1, AUSTRALIA-1.

Make no mistake this was a TEAM effort once again with W3LI, Andy in PA, KI0II, Ron in CO, VE3DWI, Tony in CN and several Hams help one another with relays due to propagation dead zones that were moving all the time in and out, long and short making for five by nine then gone.

Don't forget the TEN-TEC CW Net tomorrow night with WB1HGA, Ron as Net Control.

Happy Holidays to all and Merry Christmas and a Happy Healthy New Year to You and Yours.
God Bless,
73,
Lloyd N2KPC TEN-TEC 10 Meter SSB NCS

Holiday Lights on the Sun: Imagery of a Solar Flare

The sun emitted a significant solar flare, peaking at 7:28 p.m. EST on Dec. 19, 2014. NASA’s Solar Dynamics Observatory, which watches the sun constantly, captured an image of the event. Solar flares are powerful bursts of radiation. Harmful radiation from a flare cannot pass through Earth's atmosphere to physically affect humans on the ground, however -- when intense enough -- they can disturb the atmosphere in the layer where GPS and communications signals travel. This flare is classified as an X1.8-class flare. X-class denotes the most intense flares, while the number provides more information about its strength. An X2 is twice as intense as an X1, an X3 is three times as intense, etc.

From: Tony Lelieveld
Topic: 3919  Message: 3919
Attachments: 2 described; binary payloads are missing from this source WARC

John,

I received my 300 check-in certificate today and it too had a number in front of my call. I noticed something peculiar with my address label on the envelope. My address is 2529 Government Road RR#1. The label is printed out as follows.

Tony Lelieveld
2VE3DWI
529 Government Road RR#1
Desbarats, ON P0R 1E0

I wonder if something went amiss with their database which somehow put the first number of the address in front of the call sign. Did anybody else notice the same anomaly? Also the reason that Ken Long, N0QO, did not notice it could be as simple as that he signs a whole batch of certificates before they are printed. I have attached a copy of my certificate and the address label.

It may also be prudent to put the country name on the address in case of certificates going to countries other than the USA.

73, Tony VE3DWI.

Frosty Slopes on Mars

This image of an area on the surface of Mars, approximately 1.5 by 3 kilometers in size, shows frosted gullies on a south-facing slope within a crater.
At this time of year, only south-facing slopes retain the frost, while the north-facing slopes have melted. Gullies are not the only active geologic process going on here. A small crater is visible at the bottom of the slope.
The image was acquired on Nov. 30, 2014, by the High Resolution Imaging Science Experiment (HiRISE) camera, one of six instruments on NASA's Mars Reconnaissance Orbiter. The University of Arizona, Tucson, operates HiRISE, which was built by Ball Aerospace & Technologies Corp., Boulder, Colorado. NASA's Jet Propulsion Laboratory, a division of the California Institute of Technology in Pasadena, manages the Mars Reconnaissance Orbiter Project for NASA's Science Mission Directorate, Washington.

Topic: 3925  Message: 3925

Hi all,

There will be no 20 mtr net today. Our Son and his girlfriend just arrived from the South and they will only be here for 2 days so... needless to say.....

It has been my great pleasure to talk to all of you on the Wednesday 20 mtr net and we'll be there again next week. I have received some personal emails and Christmas cards from operators who check in on a regular basis and we really appreciate this. It shows that the Ham Community is a close knit one and a special fraternity.

Thank you all very much and my spouse Marianne, VE3MXT, and I wish you all a blessed and Merry Christmas and a Happy and safe Holiday season.

73, Tony & Marianne VE3DWI and VE3MXT.

# 3932. Christmas Comet

Yahoo group: ten_tec_radio_net (2007 — 2014)
Date: 2014-12-25 04:16:50 UTC
From: n2kpc@...
Topic: 3932  Message: 3932

U 2 Can See it.

http://photoadventures.lapplandmedia.se/en
GEOMAGNETIC UNREST: A fast stream of solar wind is buffeting Earth's magnetic field, prompting NOAA forecasters to raise the odds of a polar geomagnetic storm today to 35%. Arctic sky watchers should be alert for auroras. Aurora alerts: text http://spaceweathertext.com/, voice http://spaceweatherphone.com/
CHRISTMAS COMET: Is there a cylindrical package under your Christmas tree? Open it now. A small telescope is all you need to see Comet Lovejoy (C/2014 Q2). Discovered just last August by Terry Lovejoy in Australia, the green comet is brightening faster than expected as it moves into northern skies just in time for Christmas. Trace the comet's tail down the page for more information:
http://spaceweathergallery.com/indiv_upload.php?upload_id=105556
Gerald Rhemann took this picture on Dec. 21st using a remotely-operated telescope in Namibia. The comet's sinuous blue ion tail contrasts beautifully with its puffy green atmosphere. The colors come from ionized carbon monoxide (CO+) and diatomic carbon (C2), which glow blue and green, respectively, in the near-vacuum of interplanetary space.
"Last night (Dec. 23rd), the comet was easy to see in binoculars as a 5th magnitude fuzzy star," reports Alan Dyer http://spaceweathergallery.com/indiv_upload.php?upload_id=105596 of New Mexico. "I could just see the comet naked eye knowing exactly where to look south of Orion in the constellation Columba the dove."
Where is that? These finder charts http://www.skyandtelescope.com/astronomy-news/observing-news/binocular-comet-lovejoy-heading-c2014-q2-lovejoy-1211142/ from Sky and Telescope can help you find the comet. Better yet, if that cylindrical object is a GOTO telescope, just plug in the comet's coordinates
http://scully.cfa.harvard.edu/cgi-bin/returnprepeph.cgi?d=c&o=CK14Q020 and let the telecope find it for you.

gang,

I did some data work on TT CW nets.

Since this all started, I have logged total 1920 QSO.
This was`made possible by you.
Your participation has made it a success.
merry Xmas!

Ron wb1hga

CW nets`resume Monday night, see you there.

# 3944. TEN-TEC Net Sunday 12-28-2014 and more.

Should be a interesting 10 meter Net.
I will be using three TEN-TEC Radios, a Eagle, Omni 7 and a Jupiter.
Each with its own antenna, a S-8 V-18 foot vertical with Slinkys for radials.
S-9 V-31 vertical with Slinkys and wire radials and the Force-12 14 element tri-band
10-15-20 meter yagi. The vertical's worked very well today.
WA3DX, Earl and KC3BHD Fatu bought their new Eagle to the W2ZQ Shack today and
tried out their Eagle on the verticals and the big yagis.
KB2YOA Gaye my Wife spent the day with me working DX and we all checked into the Maine
Potatoe Net on 3985 LSB at 7:00PM along with K2XU, John with his new Eagle.
KD2JOE, Joe stopped in to the W2ZQ DVRA Shack for a visit too.
Nice to have some of the TEN-TEC Family pay a visit.
C U on the TEN-TEC Nets.

The TEN-TEC 10 meter SSB net starts each Sunday at 1PM Eastern Time on 28.440.
Lloyd N2KPC is Net Control

The TEN-TEC 40 meter SSB net starts each Sunday at 1:30PM Eastern Time on 7.263.
John K3UR is Net Control.

The TEN-TEC 20 meter SSB net starts each Sunday at 3PM Eastern Time on 14.325.
John K3UR is Net Control.

The TEN-TEC 40 meter CW net starts each Monday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The TEN-TEC 20 meter SSB net starts each Wednesday at 2PM Eastern Time on 14.325.
Tony VE3DWI is Net Control.

The TEN-TEC 40 meter CW net starts each Wednesday at 8:00PM Eastern Time on 7.063.
Ron WB1HGA is Net Control.

The 40 meter and 20 meter SSB nets stream the live audio over the Internet, by John KC2QMA.
Go to QRZ and type KC2QMA.

Please zero beat the Net Control Operators and remember that they may have to change
frequencies, as not to interfere with other Amateur Radio activity
